56787. Then would you be in favour of a system under which the people placed on these farms be put under an obligation to cultivate so much of these farms at a particular period—to have, say, five out of twenty acres tilled in three or four years?—Everybody has an idea of the revival of tillage. I don't think it will ever come to pass. We have been told that if they revive tillage these small farmers will be able to carry cattle until they are fat, but I don't think they will ever be able to do that.

56788. We had some complaint of the amount of hay being produced, and it turned out that it was owing to particular circumstances of a temporary nature?—It may be convenient for a man to meadow or conacre for one year, but I don't think it is for the good of the country to have that going on.

56789. Mr. Bryce.—Is it your experience that grazing land has been allowed to depreciate and become of less value for the want of proper manuring?—I don't think so. Some graziers are more careful on the land and get thistles and ferns cut, and the landlord probably manures the meadows and that sort of thing, but I would not say in my experience that they have been depreciating.

56790. You think, taking the price of cattle into consideration, that on the whole grazing lands are as valuable now as they were twenty years ago; I am not talking about market value, but productive value?—I was only beginning twenty years ago, but certainly I would say they are for the last ten years.

56791. You would say that there is no sensible depreciation in that period?—No.

56792. Sir Antony MacDonnell.—You had to do with the Branagh farm of 500 acres?—Yes.

Sept. 27, 1907.

Mr. Frank M. Shawe-Taylor.

56793. That was divided last year among the tenants?—Yes.

56794. Are they managing their holdings properly?—I cannot say whether they are. I only passed by three or four times. That is not the farm I was referring to in the observations I made. I cannot say as to all, but I know that some of them have it sub-let, but that may be for the convenience of the occupier.

56795. Mr. KAVANAGH.—Were not these cattle ranches all cultivated at one time?—I believe some of them were.

56796. What was the cattle trade system at that time?—I could not say before my time.

56797. It might revert back to the system that existed many years ago?—It might.

56798. All the grazing land could not be cut up at one time. You understand that it would be a gradual process?—Yes. There are signs of tillage on many of these grazing farms. There are signs of wheat having been grown there.

56799. Don't you think the milling trade would revive if the grass lands were used in part to grow more corn?—I quite agree that the grass lands that are suitable should be sub-divided and tilled, but it would be against the economic good of the country to have the heavy rich land, which is only good for grazing, touched at all.

56800. Mr. BRYCE.—You think those intermediate lands of which you spoke would be more profitable economically if they were broken up?—Many lands would.

56801. Mr. O'KELLY.—I suppose the lands of Meath would fall under that category?—Yes.

56802. Tillage there would scarcely be profitable?—I don't think so. I suppose there is land in Meath that is suitable for being tilled, but speaking generally I should say not; but I have never farmed any land in Meath.

56803. You have not seen the experiments carried out by the late Mr. M'Cann in the County Meath?—No.

56804. Some of the richest and heaviest land has been turned into tillage?—No.

56805. You think it will take some time for small farmers to get knowledge sufficient to equip them for the successful work of agriculture?—If you bring them in from congested areas.

56806. What period in your view would the teaching cover?—I would not make any defined rule.

56807. Take a man with a 25 or 30 acre holding?—The first difficulty, in my opinion, is the handling of a plough. That man probably never handled a plough in his life.

56808. What period would that cover in your view?—I think that circumstances would alter cases. One man probably in two or three years would understand a certain amount. Another man might want supervision for twice that number of years. Some of them don't know anything about horses, and never used a horse in their life.

Mr. EDWARD SHAW TENER examined.

Mr. Edward Shaw Tener.

56809. Sir ANTONY MACDONNELL.—You wish to make a statement as to some evidence that has been given?—Yes. Mr. Henry Murphy, Solicitor, of Galway, gave evidence as to the condition of the townland of Carrowbrowne on the Clanricarde Estate, near Galway, in which he said the tenants had to pay £1 per year for their turf; and he also said it was a great hardship on the tenants that there was no roadway into the bog, as the turf had to be carried a long distance by the tenants on their backs, and that it frequently happened if the weather were wet the turf had to be left on the bank for a while. He also stated that in 1892 the landlord levied a shilling tax on the banks until the roadway was made, which was never finished, and that the tax is still levied. I give a flat contradiction to every statement there. It was not true that the tenants were charged £1 each. On the contrary there is only one man on the entire estate who is charged 14s. All the rest are charged from 5s. to 10s. It is not true that any such levy as a shilling per tenant was made to make a road; nothing of the kind; nor that there was not sufficient road into the bog. On the contrary, there is a yearly sum paid by the landlord to keep that road in proper order. I pay that on its being certified to me that it is made properly, and I am astonished that a gentleman of Mr. Henry Murphy's standing as a solicitor should make any of these statements without first communicating with me. If he wished to know the exact facts I would have given him figures.

56810. CHAIRMAN.—How did this idea rise about the shilling levy?—I don't know. I never heard of it until I saw it in the paper.

56811. When the road was made did the tenants contribute anything?—No, I think not. I have been maintaining it for twenty years.

56812. It was made before you were agent?—Yes.

56813. Since you have been agent you are not aware of any payment made by the tenants towards the road?—None whatever.

56814. Sir JOHN COLOMB.—It is charged against the estate?—Yes; paid yearly.

56815. Most Rev. Dr. O'DONNELL.—Where is the turbary?—In the townland of Carrowbrowne.

56816. Is it on the tenants' holdings or separate?—Separate.

56817. Had they ever that turbary free?—I don't know; not in my time.

56818. Are the holdings rather small on that townland?—They are.

56819. Mr. Murphy told us that they were quite uneconomic. What would you propose to do to make these holdings economic?—These tenants are permitted to sell the surplus turf they take, and some of them sell £3 worth of turf, and some £5, and some £7 worth of turf in the year, though their rents may be only from £7 to £8.

56820. But you would contemplate enlargement of their holdings as a useful thing?—Certainly.

56821. How could that be done?—It could not be done on that estate.

56822. Is there no land on the Clanricarde estate that could be used for the enlargement of holdings?—No land on that estate.

56823. On other parts there would be land?—Other parts would be 15 or 20 miles away.

56824. Would not it be a good thing to give them untenanted portions on other parts of the estate?—There is no untenanted land.

56825. No land in your hands?—No land whatever on the estate that is untenanted. The only untenanted land is the home farm.

56826. Would it be quite convenient to say how the home farm is used?—One-fifth portion of it is tilled, and meadowed yearly in conjunction with the residence and the other four parts are temporarily let at present.

56827. The owner I understand is not residential?—No.

56828. Then he does not require much home farm?—But he might be.

56829. When he is not would not these poor people be able to make a better use of it?—There are people in occupation of it who are nearer to it, and it is a small piece of land after all.

56830. Should you say that the condition generally on the Clanricarde estate is that there is not enough grass land to enlarge uneconomic holdings?—There is not. There is no 11 months' holding.

56831. What the Commission would like to know is as to the possibility of a sale of this estate to a body such as the Congested Districts Board or the Estates Commissioners with a view to the enlargement of the holdings somewhere of men who have small holdings?—It would be beyond my province to enter into that question. I am simply an agent.

56832. You are not in a position?—I am not in a position to say anything about the sale of the estate.

56833. But there have been communications on the subject addressed to Lord Clanricarde?—I daresay there have.

56834. What was the nature of the replies?—I don't know. They were not addressed to me.

56835. Have you any knowledge that there were communications addressed?—I have known communications sent to him.

56836. Was there a reply?—I don't know. I cannot say.

56837. When one is deriving a large income from a district ought he not to acknowledge a communication of that sort?—I have no opinion to offer.

56838. It is generally held that people who have large estates have something of the character of trustees towards the public?—In this case the estate is the lowest rented in the county. The tenants have a great many privileges, as to turbary, wherever turbary exists, and other privileges as well. They are given large quantities of timber for their farms and for roofs of houses. I don't think they have anything to complain of with regard to the landlord, so far as rent and occupation go.

56839. Suppose that that is so, and I take it to be as you say because I have no local knowledge, what do you think should be done in the way of procuring enlarged holdings for the small tenants on the estate?—If they could get some extensions outside the estate. There is no available land outside the estate except in small patches.

56840. Are you aware that it is exceedingly difficult to do anything for small men unless the estate on which they live is sold?—That is because of the ill-will of the people on adjoining estates, or their want of patriotism in not welcoming these poor people and giving them a share in their goods.

56841. No doubt in order to bring in men you require some good-will where they are brought. Apart from that, unless an estate is sold is not it difficult to change men off it at all? Would not the farm be left derelict?—I think not. There are two small farms on the Clanricarde estate situate some 10 miles from Loughrea and they have been recently transferred to the Benmore estate you heard of to-day. The rent of one of these men was £3 5*s*., and an adjoining tenant paid him £70 for the tenant right. He was transferred with another to Benmore. I believe they are doing nicely.

56842. That transaction is so far good?—Yes.

56843. Although the tenant who was left behind and got the enlargement paid a very big price?—Yes; showing he was satisfied with the rent of his holding.

56844. Does not that show what can be done if that were extended on a large scale?—I should like to see it decidedly.

56845. The only way in which it can be done on a large scale is by purchasing the estate on which these men are?—I don't think that is necessary. This very case is an example which shows that it is not necessary. When these two men have been transferred why could not others be transferred?

56846. Does it follow because those men were in the neighbourhood that others could be provided with plots?—This was not in the neighbourhood. This was twenty miles away.

56847. Does it follow because it was done in two instances it can be done all round?—It is said the exception proves the rule, but here there were two exceptions.

56848. I quite appreciate them, but they seem to lead to this conclusion, that some such remedy should be adopted all round as would lead to a similar benefit for others?—I should most certainly like to see small holdings enlarged, and there are some parts on the Clanricarde Estate that we do intend to use to enlarge adjoining holdings.

56849. Mr. O'Kelly.—Charging fines for enlargement? Certainly not. You have no right to make that suggestion.

56850. Mine is merely a question. I have heard of such cases before, and I merely wanted to know whether in enlarging those holdings fines were to be charged. I did not suggest that you were to charge them. I suppose you will agree that congestion is a great evil?—No doubt.

56851. In common with all in the country you would like to see it brought to an end?—I should.

56852. The fact that you are a land agent affords you a special opportunity for assisting toward that end?—I should be glad if that were so.

56853. I suggest to you that there is some grazing land upon Lord Clanricarde's property?—Where is it.

56854. You say you have no untenanted land. Have you any land on the eleven months system on Lord Clanricarde's property?—No.

56855. Or any on the twelve months system?—No.

56856. What is the character of the tenancy at Tullahill? An eleven months tenancy?—No.

56857. A present tenancy?—Yes.

56858. Am I right in suggesting that the person who grazes Tullahill is a Mr. Levinge from Athlone?—Yes.

56859. Living a considerable distance from this place, he is regarded as a non-residential grazier?—Yes.

56860. When did Mr. Levinge get his tenancy?—About ten years ago. I cannot tell you the exact date.

56861. Would it be a year before the contemplated introduction of the Land Bill of 1902?—I had no thought of it. I have no recollection of considering any Act of Parliament at the time, but as you mention that farm it is unsuitable to break up. It could not be cultivated, but half of it is excellent grass land and the other half is needed for meadow to supply the other land in winter. It is a very small farm. If it were otherwise, I would be delighted to have it divided, and I have divided a larger tract of land close to Loughrea, which was surrendered three years ago, into eight portions.

56862. Are there any other tenants on the Clanricarde property holding on the same tenure as Mr. Levinge from year to year?—Some hundreds. Nearly all the tenants who are non-judicial tenants are tenants from year to year.

56863. Of that class you have some hundreds?—Yes. That is to say, that class applies to all the tenants who have not entered the Land Court. Of course, they could do so to-morrow.

56864. You have some hundreds who hold on the same terms as Mr. Levinge?—Yes, from year to year.

56865. If the Clanricarde Estate were sold in the morning to either the Estates Commissioners or the Congested Districts Board, either of these bodies would have the right to determine that tenancy by giving compensation?—Certainly, they would not have any such power. These are tenanted lands. The tenant, although he may not be a judicial tenant, has a perfect right to go into the Land Court.

56866. Do I understand you to say that a tenancy created after the Act of 1881, and known as a future tenancy, cannot for the purchase of an estate be determined by the Congested Districts Board?—When you speak of present tenants, I don't believe that the Congested Districts Board or the Estates Commissioners either would have any power to terminate the tenure of a present tenant.

56867. You don't believe it?—I am positive of it.

56868. Is that belief based on actual knowledge of the facts?—It is tenanted land, and they could not deal with it.

Mr. Stewart.—Anybody can determine a future tenancy on six months' notice. Either the Board or the landlord can do it on six months' notice with a maximum of four years compensation.

56869. Most Rev. Dr. O'Donnell.—As regard the Congested Districts Board, having come into possession of an estate, they can terminate the tenancy?—Yes; that is a different matter altogether. I thought Mr. Stewart meant that future tenancies could be determined without a sale.

56869A. Chairman.—Is not this the state of the case: if the Estates Commissioners or the Congested Districts Board purchase an estate they can terminate the tenancy of future or present tenants upon that estate by giving them six months' notice, and a maximum of three or four years' compensation paid for disturbance, with compensation for improvements?—As regards future tenants, they certainly could, because they come into the possession of the land, but I don't think they can deal that way with present tenants.

Mr. Stewart.—The Estates Commissioners cannot, but the Congested Districts Board can.

56870. Most Rev. Dr. O'Donnell.—In case the tenant were not satisfied with the compensation, he has an appeal to the County Court?—Yes, he has.

56871. Mr. O'Kelly.—In common with everyone, you deplore congestion?—No doubt.

56872. On it being pointed out to you that the only way by which on your property congestion could be brought to an end would be by the sale of the Clanricarde Estate, would you be disposed to facilitate its sale?—I have nothing to do with the sale. I am simply a land agent, and I keep within my own province.

56873. The land agent of Lord Dillon had some influence with his master?—I would like to do anything I possibly could to facilitate the well-being of the tenants.

Sept. 27, 1907

Mr. Edward Shaw Tener.

56874. Sir JOHN COLOMB.—I may take it that this is a correct description of your functions: to administer the estate according to the law and the instructions you get from your employer?—Precisely.

56875. Your power does not extend beyond that?—No.

56876. I understand that with the exception of the Clanricarde Estate demesne and a small home farm all the lands are in the hands of occupiers?—Yes.

56877. There are hundreds of tenants who are from year to year, but everyone of this particular class could go into the Court?—Yes.

56878. Is the fact that they do not go into court in any way attributable to another fact—that the reductions given to those who have gone into Court are not such as to encourage the others to go in?—I will give you an instance. Last year on portion of the estate, which comprises 67 tenants, five tenants went into the Land Court, and the rents were raised by the Sub-Commissioners one-third, and the remaining 60 odd tenants have not gone into the Land Court until this week, when four or five appeared before the Commissioners at Portumna. It remains to be seen what the Commissioners will do with them. I imagine that they will be treated in the same way.

56879. At any rate, the fact remains that the number that has gone into Court is very small?—I should say that two-thirds of the tenants have judicial rents, and the remaining one-third have not, and they don't seem to be inclined to go for them, though an occasional notice is served.

56880. But the fact remains that in the case of five tenants who went into court, their rents instead of being lowered were raised?—Yes.

56881. Is that a common occurrence on contiguous adjoining estates?—No.

56882. Sir ANTONY MACDONNELL.—Were they first or second term rents?—First term rents.

56883. Sir JOHN COLOMB.—Are the men who have now gone into court men who seek first or second term rents?—First term rents.

56884. Have any men applied for second term rents?—Yes. The last person who applied some months ago had his first term rent confirmed by the Sub-Commission.

56885. Therefore he got nothing?—He got no reduction.

56886. No landlord can terminate a present tenancy but the Congested Districts Board can do it for the relief of congestion?—Yes.

56887. That is a special enactment to give the Board powers which landlords do not possess for the benefit of the settlement of an estate?—It can only be done on the sale of an estate.

56888. Mr. BRYCE.—You say that two-thirds of your tenants are judicial. About how many would that mean?—About 800, but that would include the towns; about 400 have had rents fixed.

56889. Speaking generally, did the court give a reduction or confirm the rent or increase it?—In a great number the old rents were confirmed. In other cases there were varying reductions. Under the present system of the Land Commission it is no wonder that they do vary; because one set of Commissioners come down and value three or four farms; six months afterwards other Commissioners come down and value farms adjoining. It is impossible that the valuations can be uniform.

56890. In fact there is no principle?—There is no principle.

56891. Were there many increases besides those you mentioned?—Not increased, but I might say that the average reduction did not exceed 12½ per cent. I don't think that is the case on most Galway estates or other estates.

The Right Hon. VISCOUNT GOUGH examined.

The Right Hon. Viscount Gough.

56892. CHAIRMAN.—Kindly state any points that you wish to bring before the Commission?—I should like to call the attention of the Commission to the question not of the migration of tenants, which was spoken of two or three days ago, but to that of reintegration, which is commonly called striping. The Coburg Government has been taken up very much with this lately. Finding that the old law of 1863 had become out of date, they, on the 1st of June passed a new law. This has been put in force, or is about to be put in force in Coburg. The disadvantages of disintegration are as follows:—Loss of space along each boundary; the opportunity for law suits, the waste of time; the labour for men and animals journeying from one field to another, especially in bad weather or during harvest; the carts cannot be filled properly going from one field to another, and cannot be utilised properly; the paths are bad; manure cannot be freely conveyed to inner places, or produce drawn out; and water cannot be drained out. An interesting example of the advantages of reintegration is furnished by a place called Ralberingotten, in Nassau, where they have divided and reintegrated a parish so that each owner has exactly the same land that he had before, and the whole parish gained no less than 200 acres formerly wasted in paths. That 200 acres was £240 per annum, which capitalised at 4 per cent. made a capital of about £6,000 for this one parish. The cost of doing it is £1 per acre. Another advantage is the clearer boundaries and the lessening of the opportunity for bickering with consequent improvement to general industry and public morals; and after this is done the small holders are usually placed nearest the village, alongside one another as far as possible. It has been found that after reintegration there arises a new spirit of industry; there is more pleasure in labour, and the good results of increased industry promote prosperity. This is all in Coburg, but it would no doubt be the case at home also when you remove that cause of friction from the soil, and each owner tries to improve his position and becomes more industrious and economical. As he becomes more prosperous the rates and taxes are relatively less, and there is less outlay on public administration. With the affection of each one for his own plot comes love of country, and with heightened prosperity comes improved morality. A third advantage is the saving of manure, seed, and horse work in travelling the subdivided holdings. That is to say, when a man is travelling the different small parcels from one to another the manure falls from the cart and is lost. By reintegration seed is saved, and horse labour economised. The saving of time in going direct to a plot instead of having to go around by paths comes to a great deal in the year. A man complained to me a few days ago that he lost a great deal of time in going from one holding to another. A fifth advantage is that the shape of the farm gives advantages in cultivation. By reintegration each farm is made as far as possible four-cornered and is accessible from the road. Before the reintegration the old three-course system was forced upon the cultivators, and after it they had to employ more modern systems. The sixth advantage is bettermen of cultivation.

56893. Sir JOHN COLOMB.—You mean that the result was improved cultivation?—Yes; that they started with backward cultivation and the result was an improvement.

56894. They were not really backward when they started, but the result was that they improved it very much, relatively?—Yes.

56895. Most Rev. Dr. O'DONNELL.—Are they peasant proprietors?—Yes, speaking generally; but the law is applicable in either case. It is impossible to use farming machinery properly where you have these subdivided holdings. Ploughing is difficult with the constant turning of corners. The last news that I received a few days ago since the new law has been made is rather interesting. By the treaty between Coburg and Prussia of the 22nd April, 1907, the payment by Coburg to Prussia for the work done is £2 10*s.* for each hectare. A hectare is 2·471 acres, or we may say 2½ acres, which means £1 an acre to be paid in advance by Coburg into the Prussian treasury. Coburg has invited Prussia, as we might invite Prussia, to come over here and settle this for us, Prussia has had a technical administration in Berlin for a great many years. The smaller countries of Germany have one after the other made treaties borrowing the Prussian officials for the purpose because these small countries had no officials of their own. Under this new Act which has been passed, by which lands can be dealt with compulsorily three things come together: if one-third of the whole

parish be owned by the applicants, also in addition to that, if the applicants pay more than one third of the land tax, and if the local government approve of it; because a certain supervision has to be exercised by the Government in compulsory cases. It would not do for a minority to do it without Government supervision.

56896. Do I understand that if one-third of the holders in valuation with Government sanction combine compulsion applies to the whole parish?—Exactly so. In order to be dealt with you must have one-third of the value of the land, and in addition one-third of the number of the people concerned.

56897. Sir JOHN COLOMB.—That is the precedent for putting compulsion in operation by the Government?—Exactly; but the Government have to consider whether in each particular case it is advantageous to the place and to the country in general. They could not do it without that. It might interest the Commission to know how the ground is valued for this purpose. They choose a moment when the harvest is finished, somewhere about September or October, when the harvest of one year has been removed and that of another has not yet been planted. Then the whole parish is placed in the hands of the extremely expert officials, and they mark the ground all over with little stakes, in each of which is fixed a paper containing the value of the ground. The way they arrive at the value of the ground is they state what that ground—it may be only a few yards in some cases—has actually produced. The amount is multiplied by 25 to arrive at the capital value.

56898. CHAIRMAN.—Why is it 25?—I don't know. That is the figure taken. Twenty-five times the actual value represents the capital value. It must be done in that way, with little stakes and labels stating the actual value of the produce of the land, whether it be a rood or an acre, or whatever it is, and they are not allowed to take 25 years' purchase of the letting value, or anything of that sort.

56899. It is 25 years' purchase of the capacity of the soil?—Yes. They are not allowed to take the other thing unless it cannot be done in any other way. If such a case arose, they must take 25 years' purchase of the letting value. While the valuation is proceeding trees can only be cut with the permission of the officials, and work is suspended.

56900. How does the calculation of 25 times the produce of a year compare with the produce which the landlord receives?—It practically does not signify at all. It may be 50 per cent. or it may be 100 per cent. Twenty-five times the produce of the whole parish is put together as it were in one block, and it is only needed in order to insure that each single individual should get back the same amount as he gives up.

56901. Why do they take the arbitrary figure 25 times the value?—Suppose you had two farms in the parish, one this size and one that (*indicates with papers*), and you estimate that this farm produces £1 a year and this other farm produces £2 a year. Both are the same size. What they are valued for is put down in the book, and the re-division gives back to each man exactly what his share was already.

56902. Most Rev. Dr. O'DONNELL.—It may not be the same spot?—Yes, it may be in a different spot.

56903. CHAIRMAN.—It is a sort of way of arriving at the calculation which Mr. Stewart and others have to make in re-striping holdings?—It is much the same thing.

56904. It leaves out the question of price to the landlords?—Entirely. I am not speaking of present conditions so much in Ireland, except so far as it may be useful to have attention called to the admirable work in Coburg.

56905. One must endeavour to see how far that is adaptable to the conditions in this country?—As this law has been recently passed in Coburg and is in operation, I think it would be well worth the while of the Royal Commission to send out a competent expert to see it being done on some farm. It would not fail to be very useful if he went there and saw a parish being valued and re-divided by the Government.

56906. Most Rev. Dr. O'DONNELL.—Does that procedure suppose that all the land about is striped?—It is provided that the Government shall have the right of bringing in a little bit belonging to an adjoining parish, where the geographical features render it advisable.

56907. Sir JOHN COLOMB.—What about approximately is the area of the parish?—I am obliged to say parish. The word is untranslatable. It is "flur." It means the section of cultivated land coming together. It is something between a townland and a parish. As far as Ireland is concerned, I had my attention called particularly to the Act of 1885. It is the only Act in which the matter is alluded to. Section 11 says: Where land to be sold under this Act is sold by tenants in common, or rundale or intermixed plots, it shall be lawful for the Land Commission, upon the application of either landlord or tenant, or if it shall seem necessary to the said Land Commission to make orders for the partition, exchange, or division of such land, and the provisions of the 79th and 92nd Sections inclusive of the Land Estates Court Act shall apply. That is the Act of 1885. The Estates Commissioners and the Congested Districts Board no doubt do attempt it, but the present moment seems to me to be a particularly advantageous one to bring this matter up. The law is in operation in Coburg, and can be seen actually in operation within the next few months. There are, no doubt, a great many cases in Ireland where the matter can be particularly conveniently done at this moment by giving each of the people a little advantage from an adjoining piece of land which he had not got.

56908. Have you any knowledge of either the Estates Commissioners or the Congested Districts Board applying that rule?—I ask the Royal Commission to excuse me venturing anything on my own place, because things are in progress to some extent.

56909. You are negociating; then I certainly shall not ask you any more?—I thank the Royal Commission for hearing me, but I hope it will do some little good to raise this matter which has been found to do such an enormous amount of good in Coburg, Saxony, and Prussia, and practically in all the divisions of Germany.

56910. We have evidence as to the German system in some places, and it appears from that that the standard, roughly speaking, of what the Government consider the minimum of planting at the present moment is an area that can keep a horse. Is there any such limit as that in the arrangement which you have described?—No. This system goes very strictly on the principle that every single man must have exactly the same value at the end of it that he had in the beginning. I believe that about 4s. 6d. or 5s. worth is allowed as a great exception to that rule.

56911. Take a man with a wholly uneconomic holding. Under this arrangement does he get more than he had before?—No, strictly not. It is for re-arranging the holdings of the people, and in that way greatly improving their position.

56912. CHAIRMAN.—It is exactly the same thing as is done here in re-striping holdings from rundale, only it is done more in detail?—Yes. Some days ago, Sir John Colomb asked a witness whether a judicial holding could be re-striped in cases where there was a landlord. It can be done certainly after consultation with, and getting the approval of, two or three small farmers; but it is necessary then to go to the Land Commission and get their approval. By the time that approval has been obtained one or other of the farmers has drawn back, or something else has happened, so that it is practically impossible for a landowner, however anxious, to re-divide the holdings in a townland.

56913. Mr. O'KELLY.—Suppose that one of those farmers in Coburg wished to dispose of his interest, is he free to do so?—Entirely.

56914. Does the Government exercise any right of pre-emption?—No; not in connection with the law for the reintegration of holdings. There are other laws in existence, which affect these holdings. They are very old and very complicated.

56915. There is no special land tax of any kind? The Government has no authority over small holders? Take the case of Prussia. In Prussia pre-emption is exercised by the Government when an individual wishes to dispose of his holding?—Speaking generally, it is not so.

56916. Is that so in any part of the German Empire?—I imagine it would be found to be the case in some places, especially under some very old laws. The whole of what is now taking place in Ireland took

Sept. 27, 1907.

The Right Hon. The Viscount Gough.

place in the different States of Germany, from the beginning of the last century, through such men as Stein and Hardenberg. In 1850 it was all arranged in Saxony with very much the laws that we are making now.

56917. I suppose you can attribute the general contentment of the people in those States to what you have made reference to in the fact that they own their holdings absolutely?—I would not like to lay too much weight on that, because the people are very happy even when that is not so.

56918. Then it is a consideration?—I dare say it is. I should think so.

56919. You would like to see the same condition of things prevail in Ireland in so far as it might be reasonable?—Yes.

56920. There is game in these German States?—Yes.

56921. The people, I presume, have the absolute right to shoot or sell the game?—There are rather old laws that were in force for most of Europe. In order to have the right of shooting game a certain tenure was required, or a certain amount.

56922. Take the freeholds?—A certain amount of the freehold tenure. These old laws were all over Europe. Up to about 1750 a man was obliged to have £100 a year in order to be able to shoot.

56923. Take the ordinary freeholder with, I don't care how many, hectares, has he absolute control over game on his property?—Not unless he has got a sufficiently large holding.

56924. Then he is not master of his own holding?—Yes; he is. It would be a very long and difficult matter to explain the numerous side circumstances which have to be taken into consideration, but in order to be able to shoot game you must possess a certain amount of land as far as the particular parish concerned.

56925. Take a man who does not answer that description, who has got a small holding; has he the right of shooting game on his property?—That is managed, in a way that is talked of in Ireland, very successfully. The local government is very much developed.

56926. Has the local government control of it?—It has control over it, in so far as a certain area is incorporated together, and a great deal of money is obtained for it by letting the whole area to various persons.

56927. Who benefits by the money that accrues?—I believe it goes almost entirely to the poor law. The poor law is very nicely arranged. There are all sorts of things like shooting licences and other local licences, even the licence to keep nightingales in a cage go to the benefit of the local poor rate.

56928. In any case you rather admit the principle of unfettered ownership which places one upon his holding as absolute master of everything upon it?—It is not a question that can be answered at once. Up to the Act of 1870 my family may have been said to have been unfettered owners. They are so no longer. Here is a copy of a book published by the Government last year describing this system to which I have referred (*produces book*). I have distributed copies to the members of the Gort District Council. I don't know that much profit has arisen from that yet.

Mr. Archibald Moeran examined.

Mr. Archibald Moeran.

56929. Chairman.—You represent the Irish Forestry Society?—Yes. I was asked by the Irish Forestry Society to state what I knew of the conditions of forestry in the areas which the Congested Districts Board had to deal with, not purely locally, but as far as my knowledge went of the West of Ireland. Perhaps I ought to give my qualifications for speaking on the subject of forestry, I am a member of the Irish Forestry Society and provincial honorary secretary for Connaught, I am a member of the Scottish Arboricultural Society, and honorary editor of the quarterly journal of Forestry. I have studied forestry abroad, in France, Germany, and in United States, and Canada, and I have practised as a forestry expert in Ireland for about 12 years, having given advice to owners of a great many estates as to the treatment of their woods, the value of timber for sale, and such purposes. I have a very large knowledge of the whole centre and West of Ireland, and for about a year I was employed by the Department of Agriculture in making a forestry survey of the South and West of Ireland with reference to the statistics that they wished to gather preliminary to taking some action in the matter. I think I ought also say something about the question of the importance of reafforesting. For the past fifty years views have frequently been expressed as to the urgency of the question being taken up by the Government, and pointing out the extreme desirability of safeguarding our supplies of timber, and also the relation of forestry to the rural problems among the agricultural classes. Within the last few years these views have become so strong as to impress the Irish Government. I think the advances in the interest in forestry have been very marked within the last few years. I think it is admitted now to be a matter of urgent importance to the United Kingdom. In Ireland the conditions afford a wider scope, and make it more urgent for the State to come in to advance forestry; and I think that the area with which the Congested Districts Board have to deal affords the widest scope and the most urgent need for the operations of forestry. I think that brings it home to the Congested Districts Board as a matter which they ought to consider.

56930. I suppose you will tell us presently in your view how the Congested Districts Board would set about dealing with the question?—Quite so. I think forestry has been advocated by several witnesses here before you, and it would have been by a great many more but that the subject is understood thoroughly by very few, and a great many men would be afraid to speak on the subject lest they should be asked technical questions. A great many of the areas with which the Congested Districts Board have to deal are peopled by a migratory class of inhabitants who have to go abroad to other countries or to England and Scotland in summer time to earn wages sufficient to pay the rent or shop debts. They live practically a life of idleness in the winter months; and if forestry operations were carried on during these months it would afford very useful employment for these people. This is a matter that might engage the serious consideration of the Board. All the work could be done in the winter, and by providing these people with employment during these months it would keep them physically and mentally fit during these months, instead of allowing them to live in idleness, and too often in drink and gambling.

56931. Do you know Achill Island?—I have just been on it, but I hardly know it as I know parts of Connemara.

56932. Do you know the shoulder of Erris?—I have never been on it.

56933. What part have you in your mind where planting would be advantageous to these migratory labourers?—Connemara, for instance.

56934. In Connemara they don't migrate?—They come down South.

56935. They don't go to England?—No, but they go to this part of the country.

56936. You think that Connemara would be advantageous for planting?—A great part of it. I don't suggest that the Congested Districts Board should go in extensively for afforesting. It is a very expensive thing, and a great deal cannot be spent on it, but considering the advantages that would accrue if planting could be achieved on an increased scale on a great many of the estates in the area with which the Board will have to deal, they ought, I think, do all they can to encourage it.

56937. These mountain slopes where forestry operations can be carried out are at present under grazing?—Some of them are. I suppose you could say that all of them are under grazing, but the actual value of them for grazing is almost nominal. Where there are grazing rights they must be compensated, but sufficient areas could be got quite easily without taking areas on which there were any grazing rights.

56938. Where are those areas to be found?—There was a deputation to Mr. Bryce by the Irish Forestry Society, and he asked that question. We sent round circulars and got returns of, I think, 45,000 acres in reply.

56939. Have you got that return with you?—No.

56940. Can you send it in?—Yes.

56941. We have here a return handed in by the Irish Forestry Society?—I think that is the return.

56942. This is a return of 45,000 acres suitable for planting, on which there is no grazing?—On which there are rights of grazing by the owner, which they are prepared to sell.

56943. Suppose there are small holdings close to that grazing tract and the Board bought that estate, surely it would create great dissatisfaction among the small holders if the Board were to withhold that land to plant it?—I think that would not be found to be so. The right of grazing is recognised by adjoining people to be a very small thing as appears from the rent of a penny or a shilling an acre. These other people never had any grazing rights, and it is very hard to take from a man what he never had, and the realisation of the fact that there would be an immense amount of money spent on employment in the neighbourhood would be a very strong inducement to get people to welcome anything of that sort in the neighbourhood.

56944. Mr. Bryce.—Is this 45,000 acres you speak of in Connemara?—No; all over Ireland.

56945. That amounts to very little?—Yes, but that was in reply to a circular sent out on a week's notice to a very few people from whom we thought we could get information.

56946. Take the case of Connemara. There are some very large estates, such as the Berridge estate, there. If those were in the hands of the Congested Districts Board or some public body it would become a question what would be the best thing to do with the mountain slopes. There would be an immediate demand for the relief of congestion by distributing that land among poor tenants along the sea coast to the south. The question for the Board would be, would it be more profitable to distribute that land as grazing land among the poor people or have it under forest so as to give work which would be more profitable?—I don't think that affects my argument, as admittedly the rent of that land under grazing is nominal. In many cases you cannot put more than threepence an acre on it.

56947. Do you know the strip of mountain to the south of Ballynahinch, from Recess to Clifden?—I do. I think there are some patches of grass land through it. I don't include that in the poor mountain slopes.

56948. You mean mountain of the character of the Twelve Bens?—Yes.

56949. Would the Twelve Bens grow timber to advantage?—I am sure they would, on the eastern and north sides.

56950. Chairman.—In a return which has been handed in by the Irish Forestry Society there is not a single acre in Connemara?—I did not mention Connemara. That is not a complete return. It represents only an infinitesimal amount of what could be got.

56951. There are 1,600 acres belonging to Lord Clanricarde in Galway. Where is that?—It lies between Woodford and the borders of Clare. It is largely under scrub and timber at present.

56952. What happens to that land now?—There are no tenants on it.

56953. Are there any people grazing upon it?—There is no division, or at least a very small division between it and the outside mountain, which is grazed, but it is poor heather mountain. Cattle stray across from about three miles.

56954. Do you mean to say that if the Board got possession of that mountain the people would be content to see the mountain planted?—I think they would be very glad to see it planted. I think I can speak with absolute conviction as to that, if it were explained to them that a considerable amount of money was to be earned by them and nobody else.

56955. What labour would be given in afforesting such land-draining, planting, and fencing?—The forestry operations should be carried out in rotation, and not done all at once. It should be done in sections by rotation. A certain amount should be planted each year.

56956. That would be so arranged that the planting on one part might come into operation before the last part would be planted at all?—Yes.

56957. Do you think you would be able to show the people that it would be better to have the land planted in that way than to have the pasturage distributed among them?—There is absolutely no question of the benefit to the people by having the labour in their midst. They have no means of earning wages in the winter at present. That is the great complaint. The rental value of the area to be planted would be say only £5 per annum, and the amount to be spent on it would be perhaps a couple of thousand pounds per annum.

56958. From the point of view of the State or the authority going to spend the money on these operations, are there any statistics available showing what the returns would be?—It is extremely difficult, as everybody who has tried to do so has found, to get accurate statistics of the returns. It is a perfectly fair argument to use continental returns where the conditions are similar. Continental returns show that under conditions similar to those existing here, very large returns are to be made. Land which produces a shilling a year here can be made to produce £3 and even £6. The climate in this country is admitted to be the best in Europe for the purpose.

56959. Mr. Bryce.—Take the case of the sandy lands in Pomerania?—I have never been there. I have read about them.

56960. Do you know what the return is on that land, which is poor sand. The Landes district in the South of France is a very sandy district, but I don't think we have much land of that particular character. We have thin gravelly land on the top of rocks, but I don't think it is worse than that land in Pomerania, which is poor sand?—Our climate is superior to anything in Europe.

56961. Not to the climate of the Landes?—Very much superior for the growth of timber. It is the envy of Europe—equable and humid—and an ideal place for the growth of most of the timber that is used in commerce.

56962. Sir John Colomb.—In your opinion what is the minimum block of land to lay out in timber with the view of reaping the full profit? Is it 1,000 acres?—It is very hard to say that exactly, but I think that there is a great deal of misconception about that. It is generally supposed that it is essential to have a large block. As a matter of fact I believe that the highest profits can be realised sometimes from small blocks in certain circumstances.

56963. If you go in for a series of small blocks does not that mean increased cost of planting by reason of the enormous extent of fencing?—No, because the small blocks that I would suggest would be planted on waste corners of existing farms, perhaps an acre or two or three acres, which are ideal sites, absolutely sheltered already, and fenced with steep banks or something of that sort already to keep cattle out. There would be absolutely no expense except to put in the trees.

56964. Do you not admit that in planting an upland area the cost of a large area of 1,000 acres is very much less than the cost of planting several areas to make up the 1,000 acres?—Quite so, but that has been used as a very strong argument against all individual planting, whereas, as a matter of fact, on an area such as I speak of, it is perfectly common on a hill farm that a river, glen, or something of that sort gives an opportunity of planting infinitely cheaper than when it is done on a larger area.

56965. We will say you can get land at a nominal price. The next expense is fencing?—Yes.

56966. You will admit that the fencing must be thoroughly done and that it costs a great deal of money?—It is the cheapest to do it well.

56967. Then there are probably surface drains to be made?—Yes.

56968. Then as to the purchase and putting in of the trees. That is the initial expenditure. How do you make out that for ten or twelve years there will be continuous expenditure on that plot which will give employment?—I am presuming that the whole planting of the area is not done in one year, and that there is more planting to be done in the next year.

56969. Then your expenditure is constant expenditure upon the beginning of the work, that is, upon setting up the forest?—Yes.

56970. How long would you give the Commission, as your estimate of the time from planting, before the work would be reproductive?—I suppose about 25 years.

56971. Then do I understand that you must take up sufficient land to plant 25 portions in order to keep the work continuous?—That would be so.

56972. The first 25 years the work would be done block by block?—Of course, there would be a certain

Sept. 27, 1907.

Mr. Archibald Moeran.

amount of work in thinning before 25 years, but not profitable work.

56973. Surely on that basis there is involved a very large block of planting all close together?—That is so. It depends on the size of the plot the amount of labour that will go to discount.

56974. For the first five or six years there would be a considerable outgoing in keeping grass from the young trees?—Yes.

56975. You must also expend money on fencing and protect it?—There should be a resident forester.

56976. You admit you must take up enough to occupy the neighbourhood for 25 years. To begin with then you must face a greatly increased outlay on maintenance during the 25 or 26 years?—Yes.

56977. That is what the Commission is to contemplate when you talk about forests?—Yes.

56978. Have you ever seen Knockboy?—Yes.

56979. What is your opinion of the cause of the failure there?—I won't say. It is a most unfortunate failure.

56980. Mr. KAVANAGH.—The land was not suitable?—Very unsuitable; one of the most unsuitable sites in Ireland, but still trees can be made to grow with care and skill.

56981. As a matter of fact, they are alive, but only stunted?—A few of them may be. You might walk over hundreds of acres and not know that they had been planted.

56982. Where can they grow?—In little patches here and there, but you can walk over hundreds of acres and could not find the trees that have been planted among the heather fifteen years ago.

56983. CHAIRMAN.—It is quite impossible for a Commission like this to recommend particular areas for planting. We have not got time nor opportunity to inquire into those matters; but would it meet your view, suppose we suggest that where the Congested Districts Board buy an estate of the character you have been describing, and before any distribution of land was made, there should be a careful inquiry made by the forestry expert, and if it is found that certain lands would be more likely to be profitable under trees than under grazing, then the land should be handed over by the Board to some central Department or Agricultural Department; would that meet your view?—The view the Congested Districts Board should take up would be to treat the matter as the American Forestry Service did. The first thing they set themselves to do was to study the facts, and ascertain what would be the probable profits. They made a series of experiments to do away with existing prejudices, and so on. By gradually training their staff they taught the whole country to realise the profits of forestry. That, on a smaller scale, is what the Congested Districts Board ought to do.

56984. That assumes that the Congested Districts Board would have a Forestry Department?—Yes, or one man if you like, as long as that man knows the work, and can spend a certain amount of money.

56985. Would you suggest that afforesting of the congested areas should be done by the Board, and that of Ireland generally by the Department? Would it not be more convenient to have the whole thing in one Department?—Of course, that would be so; but then the Congested Districts Board have to deal with congestion, and the problems in the congested areas; and this seems to me to be one of the first of them.

56986. Would not that suggest that we had better form a Forestry Department that would be concerned with forestry all over Ireland?—I certainly think so.

56987. And then when the Congested Districts Board got an estate, it could transfer the area most suitable for planting to that Department?—There is no such Department.

56988. Have not the Agricultural Department someone responsible for forestry?—They have a forestry school, but only a few acres, and nothing like what you refer to.

56989. Would you imagine it would be worth while to set up a forestry department before you have got the land?—Holding the land is the first necessity. So far as the land passes into the hands of occupiers it would be hard to acquire afterwards. They should acquire land wherever possible now, and hold it over until they are ready.

56990. That is always difficult in Ireland?—Certainly; but I do not advocate plunging into extensive forestry operations, because questions would have to be settled beforehand, as to which we are now labouring in uncertainty. The first question that arises in the work is what tree is to be planted. Heretofore larch has been the most profitable, but in England larch fails because of the larch canker, and it would be flying in the face of Providence to go in for it on a large scale, simply because we do not suffer yet. Scotch firs are indigenous to the country.

56991. What you recommend is that the Board, when they get an estate, should have experiments made, under the direction of an expert, to learn what trees should be planted in certain areas?—The Board should take an active interest in forestry, and study to increase the area of planting put down by private individuals in the district. It has been frequently said that most of these private individuals, being persons of leisure and intelligence, ought to know their business, but if the Board find that teaching these men planting will largely increase planting and conduce to the benefit of the community at large, it is their business to teach these gentlemen, even though they are men of education and means. It is a very big question to go into, but I have thought it out in great detail, and there are many means, small in themselves, by which people could be encouraged to plant.

56992. We cannot go into these things now, but if you care to embody those views in any memorandum sent in, we shall be glad to include it in your evidence?—I shall be quite satisfied with calling the attention of the Commission to the importance of forestry.

56993. I think everybody admits the importance of the question. The difficulty is how to make it pay?—I don't see any insuperable difficulty at all in that.

56994. If you embody your suggestions in the form of a memorandum and send them in we shall be very happy to consider them and embody them in your evidence?—Very well, I will send in something of that sort.

Mr. WILLIAM NEILAN examined.

Mr. William Neilan.

56995. CHAIRMAN.—Where do you reside?—At Rathglass, Woodlawn. I want to tell you about an area of 8,000 acres of grass lands, beside which are 50 congested families, among whom it would be most beneficial to have this grass land divided.

56996. To whom does it belong?—To Lord Ashtown, Mr. Trench, and Mr. Smith.

56997. Are you a tenant on any of these estates?—I was an evicted tenant. I got a holding at Rathglass. They are most anxious to get the land. There is a lot of waste lands there

56998. Sir JOHN COLOMB.—Is the holding you got near the other land?—Yes. The old holding is about a mile and a half away.

56999. CHAIRMAN.—When did you get the new holding?—In 1904, from the Estates Commissioners.

57000. Most Rev. Dr. O'DONNELL.—Are you pleased with it?—I am pretty well pleased with it, but there is a dispute. I have not the right of game on it. It should be mine.

57001. Sir JOHN COLOMB.—What is the size of your holding?—36 English acres.

57002. How much game is there on it?—I could not say, but all rights were reserved from me.

57003. CHAIRMAN.—What particular game is there on it that you want to shoot?—Rabbits.

57004. Are you aware that rabbits are not game?—Yes.

57005. What else is there besides rabbits?—The timber that is on my holding is claimed from me.

57006. What do you intend to do with the game?—Prevent trespass on my crops.

57007. Does anyone come to shoot them?—I saw no one come to shoot them.

57008. Most Rev. Dr. O'Donnell.—What have you here?—Pheasants.

57009. The new holding is better than the one you had before?—Yes, but I have not as much land.

57010. Are you a tenant or a tenant purchaser on the new holding?—A tenant purchaser.

57011. What is the annuity?—£17 17s.

57012. What was the rent of the old holding?—£9.

57013. This is a more considerable holding?—Yes.

57014. Have you turbary?—I have.

57015. You think you ought to have the game rights also?—Yes.

57016. What about your neighbours? Have they the game rights?—No. All the game is kept from them on that estate.

57017. It is very likely that the Estates Commissioners could not acquire the property except on those terms?—I could not tell you that. We understood we were to get the game rights, timber and everything, but after we got in, in 1905, the vendor sold it to another man, a grazier, who is claiming it on us.

57018. Sir John Colomb.—What would be the value of what you would shoot in a year on your farm if you had the game rights?—If I reared pheasants I would shoot £5 or £6 worth.

57019. If you reared pheasants they would go on other people's land. You could not teach them not to go on other people's lands?—I only want to prevent trespass on my plots.

57020. Chairman.—Did this other man purchase the house and lands under the Act of 1903?—Yes, I think so. The grazier is claiming those from us. The vendor is claiming nothing.

The Commission adjourned.

ONE HUNDRED AND NINTH PUBLIC SITTING.

MONDAY, SEPTEMBER 30TH, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Courthouse, Ballinasloe.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon Sir ANTONY MACDONNELL, G.C.S.I.; The Right Hon. Sir JOHN COLOMB, K.C.M.G.; JOHN ANNAN BRYCE, Esq., M.P.; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Sept. 30, 1907.

Rev. JOSEPH ALFRED PELLY examined.

Rev. Joseph Alfred Pelly.

57021. CHAIRMAN.—You are nominated by the Bishop of Clonfert, I think?—Yes, my lord.

57022. You are parish priest of what parish?—I am curate at Ballinasloe.

57023. In what parish in Ballinasloe?—It is called the parish of Kilclooney.

57024. Tell us what you wish to say?—I am taking it for granted that the Commissioners have already been supplied, or are getting supplied, with statistics showing the value of the untenanted lands in the unions comprised in the diocese, that is to say in the unions of Portumna, Loughrea and Ballinasloe. From these statistics it is apparent that nearly all the grass land in this district, and all the best land, is held by graziers, and that the portions held by the tenants are cramped in quantity and poor in quality. To show the condition of things I thought it best to particularise, and I take one particular parish, Kilquaine, as typical of the rest of the diocese of Clonfert.

57025. Where is Kilquaine?—It is situated about eleven miles from Ballinasloe and a little more than half way to Portumna, near the town of Eyrecourt in the union of Portumna.

57026. That is south-west from here?—Yes. In the parish of Kilquaine—it is a half parish—there are only 80 families. It contains 6,859 acres, of which 2,773 acres are let to graziers under the eleven months' system. Resident large farmers, ten or eleven in number, hold an additional 1,000 acres. Those 3,700 acres embrace every acre of even fair quality in the parish, the seventy small agricultural holdings being of the worst description of land. The landlords are Mr. Allan Pollock, Mr. Algernon Persse, the representatives of C. W. Ruthven, Colonel J. P. Nolan, and the representatives of Capt. P. Cowan. No sales, except with the last-mentioned, have been effected in this parish. The Pollock Estate consists of about 13,000 acres. It was purchased after the Famine year by the late Mr. Allan Pollock, a Glasgow shipbuilder. It was part of the best lands in East Galway, and, notwithstanding the ravages of the Famine, the tenants managed to hold their own in this place and were in comparatively comfortable circumstances at the time of the sale of this estate in 1854. No sooner did Mr. Pollock acquire the ownership of the land than he inaugurated the most sweeping and heartless campaign of eviction that ever swept a countryside bare. With the exception of one small village in the parish of Clontuckert, where leases existed, and which defied his power, on all these thirteen thousand acres not one solitary tenant was allowed to remain, and they were all turned out without one penny compensation.

57027. Against their will?—Against their will. In this village of Ballymana that held under leases Mr. Pollock made an effort to get possession, and even offered them eighteen years' purchase for their tenant interest in the holdings, but they refused. What became of all these people? Well, about two years ago I was passing by and I saw an old man standing in the midst of one of these ranches, and he told me that he was a returned American, and that he came to see the place where he was born. There was not a stone to show it. His people were evicted fifty years before by Pollock. He escaped to America with the money, he told me, he earned by the knocking down of his father's home and his neighbour's homes, and helping to build with the materials the wall that surrounds the ranches now.

57028. I don't quite follow that?—He escaped to America from the starvation that surrounded them after the family were turned out, with the money that he earned from Pollock in knocking down his father's house and a neighbour's house, and helping to build the wall that surrounds the big farm now.

57029. Sir ANTONY MACDONNELL.—Did they not get free passage to America?—Not a solitary farthing did they ever get. And that was fifty years ago. Now, I have here, my lord, the rental and maps and names of tenants and valuation on two of Pollock's farms in Kilquaine at the time it was sold in the Incumbered Estates Court; that is in 1854.

57030. Sir JOHN COLOMB.—The Incumbered Estates Court?—The Incumbered Estates Court in 1854. This shows, my lord, that there existed on those two farms fifty-three families in comfort where there is not a single one now but two herds, and the farms are rented to two graziers.

57031. CHAIRMAN.—What is the general size of those holdings?—The quantity of land in one is 15 acres, in another 20 acres; then 9 acres, 33 acres, 28 acres, 10 acres, 15 acres 3 roods, 7 acres, and so on. The result of that wholesale eviction was that the town of Eyrecourt, which at one time was one of the most prosperous towns in East Galway, is now in a ruinous state. It had its markets and its professional men—its lawyers and doctors, a mill and a brewery, and a few thousands of a population. It is now a mass of ruins, with a few hundreds of people who are on the brink of beggary. There was a large village at Laurencetown that has been completely wiped out. The town of Banagher, which is in the immediate neighbourhood of the property, has gone down very much. Ballinasloe, too, has felt to the full the effect of the blight that fell upon a whole side of this country when Pollock cleared it out. The owners, at the time, of this part of Kilquaine that I am speaking of here were the Eyres, of Eyrecourt, and part of the St. Georges, of Tyrone. The Union with England ruined them as it ruined their tenants. After the fall of the Irish Parliament society changed over to London. The Irish families that went over, with their extravagance or their pride, went the pace with the rich English people, so that they mortgaged their estates and squeezed their tenants to pay the mortgages; and when the famine came, and nothing more could be squeezed out of the tenants they themselves were ruined. Out of their ruin arose the Incumbered Estates Court, and out of the Incumbered Estates Court arose these speculators, such as Pollock, who did so much to ruin the country; and speculators worse than Pollock; speculators who bought with borrowed capital, and only used the tenants on the lands they bought as an asset for bringing a bigger dividend, by putting on increased rents. And these

speculators, too, were the means of introducing us to the grazier.

57032. Sir ANTONY MACDONNELL.—This means that before the Incumbered Estates Court, and before the introduction of cattle ranches there was no grazing in Ireland?—I am only speaking of this particular district in Galway. My father was an agent, who collected £30,000 a year in this place, and was agent over part of these lands.

57033. In the lands to which you refer, on the Pollock Estate, you say that before those general evictions there were no graziers?—I see by this map that there was a small grass farm held there, but it could not be considered a grazing farm. What I mean by grazing farms are those eleven months' takes, where immense tracts of land have been taken for that purpose.

57034. CHAIRMAN.—What is the extent of the land on which you told us that in 1854 there were 53 families?—Well, there are 1,600 acres in the Pollock property in the parish of Kilquaine, but the 1,600 acres—it is rather more than 1,600 acres—would embrace more than those two farms. Those two farms, I would say, contained together about 800 acres.

57035. And upon these two farms containing 800 acres there were 53 families?—I could not make out the exact rental or acreage of them, but I fancy they were about 800 acres.

57036. And upon these 800 acres there were 53 families?—There were 53 families. I could make out the number of them, but I could not make out the acreage from the note that is given in this, but I will hand it in to the Commission. (*Document handed in.*) Mr. Pollock, when he took up all this place, commenced what we hear much about at the present time (Lord Ashtown is talking a lot about it), high scientific farming under Scotch management. The result was that the managers were prosperous themselves, and the estate went into the courts and has a receiver on it. Even with their appliances the Scotch managers failed to make it pay. Of course, my lord, extravagance would run away with the best property, and I have it from one particular manager that only for what they keep in tillage grazing would not pay.

57037. You say a manager said this?—I will mention the name if you like. When they were there for a time with the Pollocks they went elsewhere and took up big farms for themselves.

57038. Your point is this: that after the clearances these farms were amalgamated into a large grazing tract and managers were put in by the owners?—Yes.

57039. And that it was not successful?—And it was not successful.

57040. And that those managers became rich men and left their employers and set up for themselves?—Yes, that is so.

57041. Did they set up for themselves in this country?—Not in this neighbourhood. One of them, named Algie, did, and he failed afterwards. And there were several others, Mr. Shaw and others of them, that in my own memory became rich men; but the estate went down.

57042. Sir ANTONY MACDONNELL.—Did they set up in grazing farms or in mixed farms?—Some of them did in the County Meath. Those farms at Kilquaine are held by four graziers in four divisions. In my own memory there has been a succession of graziers in each of those farms. They have, one after another, disappeared, to make room for others.

57043. Do you suggest that they disappeared because of anything?—Because they got smashed with the competitive rents. I say that, and I intend to prove it by-and-bye.

57044. Sir JOHN COLOMB.—You say that Pollock was a Scotchman, was not he?—He was a Scotch shipbuilder.

57045. You say that he cleared the estate and set up advanced farming on the two farms?—Yes.

57046. Was that mixed farming?—Yes; he intended it at the time to be mixed farming, but he dropped it, and confined the mixed farming to what was immediately about Lismany.

57047. Are we to understand your opinion to be that the thing failed by reason of a wrong system of farming, or by reason of this, that although it may have succeeded and been profitable the managers left the employer?—Well, that would be a very strong statement to make.

57048. At all events, are we to understand that in your view it was an advanced system of farming, and that the smash was due to the effect of a diversion of the profits from mixed farming to other pockets than the landlord's?—I am giving you two facts: that this farm was inaugurated and that the managers left wealthy, and the additional fact that the estate failed.

57049. Then, we are not to understand that the failure was attributable to the mixed farming?—No; on the contrary, I advocate mixed farming.

57050. It is a very important point?—It is a fact.

57051. I understood that you were going to develop that, and that you had something more to say on that point. Is that so?—On the breaking up of the farms I have more to say. There was no application for sale made to Mr. Pollock in that case that I know of, because there were no tenants whatever to make application to sell; but recently the Estates Commissioners have been on the land. That was a fortnight ago. The Evicted Tenants Bill gave them some little power, and they came here to take up, I understand, 1,600 acres for the purpose of restoring the evicted tenants of the Clanricarde Estate. And if you allow me to make a remark, I know it was canvassed very much and it caused a good deal of dissatisfaction. I was administrator at the time to the Most Rev. Dr. Healy, Archbishop of Tuam, then Coadjutor-Bishop in Portumna. I was during the whole of the Clanricarde business with Dr. Healy, and now in the case of the tenants that were put out, the Estates Commissioners have come here to take up this land. To my mind, I do not know who may be blamed for it, but I know that lots of the evicted tenants would prefer being restored to their old holdings. Three with what I consider good holdings, six made bankrupt, seven at a village in the Woodford direction, five or six in the other direction, are quite willing, and have expressed their willingness, to accept farms; and if that is so the tenants would prefer to go back to their old holdings in most cases.

57052. I do not think we have to do with that, and I should not dwell on that if I were you?—Then, I pass to the next property, the Ruthven property. This was a case of land acquired in the Incumbered Estates Court. It consists of 15 agricultural holdings, the highest valuation being £28 5*s.*, and ranging down to £6, and one large grass farm of 240 acres held by a grazier. The estate is mortgaged to the Life Association of Scotland, in whose agents, A. O'Connor and Son, 11, Hume-street, Dublin, is vested all management.

57053. Mr. BRYCE.—Have there been clearances on that estate?—As on the other estates in this parish, the good land was all cleared, the tenants occupying only what was not worth clearing, undrained, cold bottoms, or sandy hills, with little soil. None of the land is capable of growing meadow, and the cost of hay is another rent on their farms. The tenants some years ago applied to Mr. Golding, solicitor to the Insurance Company, to have the estate sold. The agent refused absolutely to entertain the question of sale. I have the letter here if you care for it. Here we have exemplified another of the many evil agencies that have brought about the impoverishment of the Irish tenants—corporations that advanced money to the full value of what the lands were worth in years of prosperity, that will make no allowance in bad years, and that every year, good and bad, take everything that comes from the soil and give nothing back to it. The gombeen man is bad enough and the gombeen-shopkeeper is worse, but the gombeen foreign corporation is the worst of all, because the other two give some little money to the country, but these give nothing at all. The grass land on this property has, like all others, seen a succession of graziers whom I can mention. It is now held by a grazier who has three or four thousands acres of land in this part of Galway.

57054. Sir ANTONY MACDONNELL.—You are still concerned with the Pollock property?—No, the Ruthven property.

57054A. Mr. BRYCE.—Where is that?—Eleven miles from Ballinasloe, in the direction of Portumna.

57055. Towards Woodford?—No, near Killimore.

57056. CHAIRMAN.—Does it belong to Mr. Ruthven?—No, the landlord died in London.

Sept. 30, 1907.

Rev. Joseph Alfred Pelly.

57057. Was his name Bermingham Ruthven?—Yes.

57058. He is dead?—I saw his death a few days ago in the paper.

57059. And the property is in the hands of some insurance company?—In the hands of an insurance company.

57060. Sir JOHN COLOMB.—Was that property bought in the Incumbered Estates Court?—Yes, that is what I understand.

57061. It is another instance of Incumbered Estates Court purchase?—Yes.

57062. Sir ANTONY MACDONNELL.—You say there was a succession of graziers?—Yes.

57063. What became of them?—They have disappeared.

57064. One failing after another?—Oh, yes.

57065. To what do you attribute their failing?—To competitive rents and the hunger for land.

57066. CHAIRMAN.—Can you tell us how many of them there were, in how many years, and so on, and what rent they paid—can you give us some details?—Yes, I can. In this place of Pollock's that we have been speaking of, we have had the Lestranges and we had Hardy.

57067. All on the same land?—Yes, the Lestranges, and the Hardys, and the Ryans; and now it is held by Cooke and by Mr. Mitchell; and by a grazier shopkeeper, Mrs. Connolly.

57068. Now, what period elapsed between the time when Mr. Lestrange went there and the time when Mr. Cooke came in?—As far as my memory goes, I think the Hardys were actually first, the Ryans second, the Lestranges after, and the Cookes next; and that would cover forty years of my memory. I was born in the immediate neighbourhood.

57069. Did these people vary very much in the size of their takes?—No; I think that they remained practically the same. These are all walled in on Pollock's land.

57070. Sir ANTONY MACDONNELL.—Can you say whether there was a rise of rent with each successive holder—whether the rents were raised?—Like all the grazing lands, it is only let from year to year, and if a man offered a bigger rent the landlord would very likely take him.

57071. How long would you say each of these men held the land?—Well, I could not say accurately as regards the years. There may have been some more graziers that I do not remember presently.

57072. Did each of these hold the land for, say, 7 or 8 years?—They held the lands till they were able to hold them no longer.

57073. Take Lestrange. Did he hold it for seven years?—He held it from year to year on the eleven months' system, but I do not know how long.

57074. Was the same rent fixed in each successive year?—No one knows what rent they paid.

57075. Mr. BRYCE.—Have the rents been keeping up, or are they going down?—The rents varied. For instance, about 1872, the very good years sent the graziers mad. All they wanted was the land, and they paid what price the landlord liked. I know one particular case. I know a man to give 52*s.* 6*d.* an acre for land that was bought for £5 an acre in the Incumbered Estates Court.

57076. Sir ANTONY MACDONNELL.—You talk about the eleven months system. At that time was there an eleven months system?—No, there was not.

57077. Not previous to 1870?—No.

57078. When you are dealing with the period anterior to 1870 you do not mean to imply that there was an eleven months system then?—No, I am talking of the yearly system. The eleven months system is much the same thing. The eleven months system was got up for the purpose, I suppose, of evading the Act of 1870 and subsequent Acts.

57079. Mr. BRYCE.—Since 1872 the rents of these grazing lands have fallen off, I suppose, very much?—I do not know by how much.

57080. Are the rents of these grazing lands keeping up?—Oh, not at all. In late times owing to the agitation they must have gone down, because a man gets very unpopular by keeping grazing land

57081. CHAIRMAN.—How long has the agitation been going on in this part of Ireland?—Since 1879.

57082. Against the graziers?—Oh, no; but, of course, the people were always against the grass land; but the real movement against the graziers was since the starting of the United Irish League. That would be about 1890.

57083. 1900?—Yes, 1900; about that period.

57084. When was the last year that it could be said that normal conditions were existing with regard to the letting of these lands—conditions which were not affected in any way by local agitation?—Well, I think it never came to an acute crisis till the Wyndham Act. There was no real interference with the graziers until it was recognised that the Act would be futile unless the grass lands were split up.

57085. Would it be fair to take ten years before 1903 as the time when only economic considerations governed the letting of these lands?—That would be fair.

57086. Now with regard to those ten years, say, from 1893 to 1903, would you say the tendency of grazing rents was to go up or down?—I fancy they were going down. I don't know the variations of the rents. The Persse Estate is the next. There are nine agricultural holdings on this estate, and I may mention to your lordship's Commission that the Wyndham Act is ineffective in all this district.

57087. Sir JOHN COLOMB.—Do you mean ineffective as regards the transfer of land?—Yes.

57088. CHAIRMAN.—Where is that estate?—At Spring Grove, about 15 miles from Ballinasloe. There are nine agricultural holdings on this estate, with valuations ranging from £51 7*s.* to £7 15*s.*, and in addition a grass farm of 250 acres, grazed by the owner, Mr. Algernon Persse, who resides at Ardrahan, a distance of over thirty miles from Spring Grove. I found out that this farm also was cleared in the bad times. The tenants on this property are not quite so badly off as their neighbours in the other parts of the parish, but as on all other properties the landlord was asked through the parish priest by the tenants to sell, and his answer was that he was willing to sell the tenants' holdings, but the grass lands he would never part with because he required them for himself. I have that letter here. And the last property, and the worst in the parish to which I have referred, is the Nolan property, the estate of Colonel J. P. Nolan. That was bought, I believe, in the Incumbered Estates Court. The Brownes of Mount Hazel were the owners, I think, previously. At the time of the passing of the Wyndham Act it was owned by Colonel Walter Nolan. It consists of 27 tenancies, the highest valuation being £10, and the majority only a few pounds; and in addition there is a large grass farm adjoining the small holdings, containing about 450 statute acres, off which the tenants were cleared 50 or 60 years ago. Some of the evicted were allowed to settle in the bog, and there they have remained ever since in poverty, at times bordering on starvation. They are 12 and 15 miles from Ballinasloe and Loughrea, and their only resource besides the pittance they wring from a worn-out bog is the sale of turf. I have seen them since I was a child, and I know no more pitiable sight than that which was constantly before me, men and boys and girls starting from Loughrea in the early hours of the morning with half-starved donkeys carrying little loads of turf for which they received a few shillings, and returning late at night from their weary journey in all weathers in order that they might be able to live. That is no exaggeration, my lord.

57089. Mr. BRYCE.—Is it on the mountain north of Woodford?—No; this property that I am speaking of now is almost directly between this and Killimore.

57090. Near Kiltormer?—It is a mile from Kiltormer—a mile and a half.

57091. To the south of Kiltormer?—To the south of Kiltormer. On the passing of the Land Act, the owner, Colonel Walter Nolan, and the agent, the late Sebastian Nolan, consented to sell, and as an earnest of their intention took up the grass lands from the grazier then in occupation. A price was offered for the property by the Estates Commissioners, which the agent did not see his way to accept. At this stage of the proceedings both the owner, Colonel Walter Nolan, and the agent, Mr. Sebastian Nolan, died, and the property fell into the possession of

Col. John Philip Nolan. Col. John Philip Nolan was approached by both the parish priests, and reminded of his brother's promise to divide the grass land. He denied that his late brother ever had any design of breaking up the grass land, although we have the letter of Mr. Sebastian Nolan, saying it was his brother's design to break them up and divide them. He denounced the offer that was made by the Estates Commissioners as confiscation, worse than that of Cromwell. Those were his words. He, however, offered to sell the tenanted land to the tenants, but would not sell, and refused to sell, the untenanted land unless he got a price that would bring him the net income he had from the land under competitive rents in the best of years.

57092. Sir JOHN COLOMB.—Did he state that in his letter in those terms; is that your construction of his meaning, or did he state that in specific terms?—He stated that he would not sell unless he got his net income.

57093. Have you got that letter?—I have not it here.

57094. But you can get it?—I have not either of Colonel Nolan's letters.

57095. But you can get them?—I can get them.

57096. CHAIRMAN.—When you say that he wanted his net income based on the competitive rent of the best year, was that one year or several years?—The best of years.

57097. One year only?—I give you the statement I have taken from the parish priest. I give you the wording, and I think the wording, as I have stated it, is correct.

57098. Do you mean to say that he would take 1872 or 1873, the year when the graziers went mad, as the basis of his calculation?—That is the reading that his letter would imply.

57099. You do not think he meant over a series of years?—Well, it is possible. I noticed a succession of graziers in that farm, and they are all gone—Ryan, Cowen, Mitchell, Hardy, and, lately, Mr. Byrne. They have all ceased, except Mr. Byrne, to be seen at our fairs or markets, and they have ceased to be graziers.

57100. This disappearance of the graziers do you attribute to the fact of high rents?—They ruined themselves by competitive rents. In the good years the grazier could afford to pay his rent if he got a few shillings profit on each acre, because his acres were numbered by the hundred. In the good years he paid that rent, but when the fall in the price of stock came, and the profits were turned into losses, he then went bankrupt; and that is what I have seen. Colonel Nolan offered to sell the holdings to the tenants at a price that would bring him his net income. His net income from the tenants, I suppose, he would have the Commissioners estimate on the rental he would produce. It would be a false basis on which to estimate the price. His net income he would represent as synonymous with his rental.

57101. Sir JOHN COLOMB.—You mean that, after deducting the necessary outgoings for the estate, the balance would be net income?—Yes.

57102. Mr. BRYCE.—I do not think that is quite what you mean. You mean that he wanted his gross income?—No; so many years' purchase of the rental.

57103. That would be the gross income?—On the rental.

57104. That would be the gross income?—Well, the net rental and the net income as shown by actual receipts are two different things. I have stated that he tried to sell at so many years' purchase on the rental. It would be a false basis to estimate the price. He does not receive and did not receive anything like what his rental would show; and he does not receive it, and I have the proof of it here.

57105. CHAIRMAN.—Now you are arguing the difference between that and gross income?—What I mean is this: that if a man sells at so many years' purchase of his rental, the presumption is that his rental represents what he gets from the land. For instance, he says, "The rental shows that a man pays me £3. I want twenty years' purchase of that £3." It would appear to the Commissioners if it went before them that he was receiving that £3.

57106. Sir ANTONY MACDONNELL.—Not necessarily. It is a mere matter of nomenclature. Twenty years' purchase of the gross rental might be equivalent to twenty-two years' purchase of the net rental; so that you could express the thing in terms of the gross rental and at the same time have a basis of net rental?—The landlords want their net income. They want a price that would bring them their net income if invested at 3½ per cent. Well, now, if Colonel Nolan wants his net rental out of this property I suppose that means his rental, barring deductions for outgoings. Now, here is a schedule of the arrears of rent due by these poor tenants on this property, stretching over a number of years—some of them an immense number of years—which had to be absolutely blotted out, because the people could not pay them.

57106A. Were those rents fixed by the Court?—They may have been originally.

57107. Have they been fixed by the Court?—I do not think these people have ever gone into the Court. They were too poor.

57108. CHAIRMAN.—But surely no man could advance the theory that nominal rental was net rental?—I am afraid they might. In this case, at least, rental does not represent rent received or possible.

57109. Do you suggest that it is put forward that upon an estate where it can be shown by the books that a number of years' arrears of rent were due, the nominal rental is to include nominal debts, that, as a matter of fact, cannot be collected—that it is claimed that the net income should be based on that and not on what has actually been collected?—I would not say "should be," but it is likely what the landlord would do.

57110. Do you mean to say that that claim has been put forward?

57111. Sir ANTONY MACDONNELL.—In cases where the landlord is his own receiver, where there are no receipts, there the gross rent and the net income are approximate, for he is his own agent?—The point I wanted to draw from it is that when the landlords talk about receiving their net income, that they ought to get a price that would bring them in their net income, their net income should not be estimated upon their rental but upon the receipts that they get actually.

57112. CHAIRMAN.—That is your theory?—Yes.

57113. That is merely for tenanted land?—Yes. I am finished with that property. Now I say that the parish of Kilquaine represents, and is typical of, an immense triangle of land, with Loughrea, Ballinasloe, and Portumna at the apexes of the triangle, and each side of the triangle fifteen miles. You have within that triangle all the best land in the three unions I have mentioned. In parts of this district the population was larger than in others, and public opinion made itself felt, and they were able to obtain some amelioration in their position, and to buy in many cases from the landlords; but throughout the part of the county that I am speaking of, the three unions, there is a constant quantity of grazing ranches beside congestion, and by this congestion I mean that the bulk of the people are living on farms which, in the good years, can scarcely give them a decent living; in ordinary years mean poverty, and in bad years mean extreme want. That state of things was brought about by means of famines and by eviction. The landlords were able to corner all the best land in this country. They created a land trust, which was more hostile to progress than the trusts in beef and steel in America, because those trusts in America are in some industries, but the trust here in land is in all the produce of industry, and the effect of this trust was—the only resource of the people being the land—to limit their access to it, and the demand being universal, the price not only goes up on the large holdings but also on the small holdings. And another evil effect of it was that rents were fixed not according to economical considerations, but according to the necessity of the people.

57114. Sir JOHN COLOMB.—You are speaking of the Famine of 1846?—I am speaking of the present state of things—of the condition of things that exists at present.

57115. CHAIRMAN.—That you applied to tenanted land as well as grazing land?—Yes. The curse of

Sept. 30, 1907.

Rev. Joseph Alfred Pelly

the grazing land was that it created a trust, and it regulated the supply, just like the other trusts. That is exactly what happened here. They cornered the land and regulated the supply to keep up the price. And another effect of it also was that the spade labourers, not finding an outlet at home for their labour, had to go to enrich other countries, whereas at their own doors there were thousands of acres of land on which they might be profitably employed; and the best and strongest of them went away to America, leaving only the debilitated and the weak, with the result that the people are becoming deteriorated in physique, because the bone and sinew is going away from them. And I say this trust in land gave rise to the grazier. The speculators in land in the Incumbered Estates Court had not the inclination or energy or capital to work those ranches that were cleared. They put them up to competition, and out of this competition arose the grazier. Now, as I said before, I saw three generations of graziers in this place rise up and fall. The first of them were mostly some of the creatures of the rent office, and many, too, were shopkeepers, who, in the bad times, made a corner in food.

57116. What do you mean by creatures of the rent office?—Anyone who served the landlord very well in helping the clearances deserved a little reward, and came in for it that way; and I know, too, many of them grew very fat on the bribes they received from the unfortunate people who were turned out. Though they received the bribes, they did nothing for them, and the people were turned out.

57117. Mr. Bryce.—What time are you speaking of?—I am speaking of the time I was born—about 1855. In the bad times shopkeepers made money by making a corner in food. Food at the time was very scarce, and they could charge what price they liked, and I am sorry to say many of them did make money, and in the first rise of the graziers they came mostly from tradesmen and those who made money in business. And now these are gone, and I could mention scores of them, and everyone connected with this county feels that what I am saying is absolutely true. These went down, and a new set of men arose in Ireland. A good many of them were shopkeepers, and a great deal of them were those who had a little money, and borrowed more from the banks, to work on. About 1879 or so they ceased, and later on we had another set, and amongst them there was a good deal of the shopkeeper, too, in evidence, and men that were the tools of the Property Defence Association; we have men that were poor twenty years ago, that we know had not a blessed bit in the world, and now they are ready to grasp the whole side of a country.

57118. Sir Antony MacDonnell.—Are those men in the United Irish League now?—Oh, indeed, they are not.

57119. Mr. Bryce.—But tell me about the shopkeepers?—These all got ruined by competitive rents and by the change of times of course; because the grazier would be satisfied, as I said, with a few shillings profit on each acre, when his acres extended to a thousand, but let bad years come and he goes smash. They all go down in this country. The landlord did not help them, and there was no sympathy on the part of the people. They are looked upon as rash speculators, ruined. And although they saw them ruined, others were not deterred from following in their footsteps, because, like the fall of a gambler, to others having the same mania, it is not likely to prove an obstacle in their path. Irishmen always rush into land speculation, and it always appeals to the prosperous shopkeeper. He has made money, and he sees in the land a nice way and an alluring way of investing his money, because then he would have the manipulation of his own capital himself, and because, with a vanity begotten of success in one branch, he thinks he could be successful in others; and he believes, as many believe, that it requires only to have money in order to be a successful farmer. As these shopkeepers are ignorant of the value of land, they give an inflated price for it, often paid out of the profit of the counter, and this went on till in bad years pressure came down on the men, and ruined a lot of them. Of course, all the graziers were not shopkeeper-graziers, but I should say nine or ten years ago nine-tenths of the grazing ranches in this part of the country were occupied by the shopkeeper-graziers. I think they were a great curse. They made their money out of the poor, and with the money they made out of the poor they barred the access of the poor to the land.

57120. I suppose when the man does not see very much to invest in except the land it is natural for him to put his money into the land, because it is a convenient way of realising his debts. When the farmers are indebted to him he gets for his money their cattle, and then he puts the cattle on a grazing farm?—Now, sir, I have heard this statement, and I have read in the papers this statement, that has been made about the shopkeepers—that they use their position as shopkeepers and creditors of the farmer in order to get cattle cheap and to stock the land. I know all the grazier-shopkeepers in this country, and I do not believe that in the case of a single one of them they ever did that. But I told you how the grazier-shopkeepers arose, and that in their anxiety to invest their money they stopped the access of the people to the grass land; and I believe it would have been better for them to have minded their shop business; for I know very few of the shopkeepers going from their business to mind farms that did not lose by the transaction.

57121. Sir John Colomb.—You speak of the shopkeepers barring the access of the people to the land. Surely the shopkeepers are part of the people?—Yes; but they get their money out of the pockets of the poor people; and I think money thus got ought not to be used for the purpose of barring the people from what is necessary for them in order to get a decent living.

57122. You mean that they barred that section of the people that are agricultural?—Yes, and badly off. Now, these graziers I believe to be the real obstacle between the people and the realisation of the intentions of the legislature as expressed in the Wyndham Act. I believe if the graziers were done away with that the landlords would sell, and that the good land would return back to those that originally held it; that emigration would cease, that the greatness of the country, which is in its population, would grow, and that the wealth of the country, which is in the land, would receive its full development. I read the evidence of gentlemen examined in Tuam and elsewhere on the grazing system. The question at issue seems to be this:—Is the grazier such an asset to the country that he ought to be retained even at the cost of keeping the people as they are? I suppose no one would accept that, as it is universally acknowledged as a sound maxim of all good Government that the good of the many should be put before the selfish aggrandisement of the few. Is he such an asset that he ought to be retained for the good and welfare of the country? I say he is not, in comparison with the farmers, who use mixed agriculture. I say that untenanted land as it is used at present does not approach, and could not approach, even the possibility of doing the good that it could in mixed agriculture by ordinary husbandry. I say that the grazier does not help to develop the resources of the country in the same proportion as a farmer on a fair-sized holding of a mixed character would do. And everyone acknowledges that the poor man with, say, seven acres gets more money out of that land, and does more for the country than a grazier for the same proportion of the land.

57123. Chairman.—I do not think you need labour that very much?—And of course the grazing does deteriorate the land, and upon that question there was some evidence put forward by Mr. Armstrong in Tuam, and by Mr. Shaw Taylor in Loughrea. Their argument for grazing is that to remove the grazier would stop the supply of store cattle, and that it is Connaught that supplies the rest of Ireland. I say that is not true. You do not stop the supply.

57124. Sir John Colomb.—Is not it the demand you mean?—I suppose the supply and demand go with one another. I say first, the graziers do not produce. They are not producers. They do not breed stock. The real caterers for the supply are the small farmers, even as they are at present, and all the stock that is upon the grazing ranches, and the cattle particularly that are on the grazing ranches, are bought from the small farmer who has to sell them on account of

the smallness of his farm. I say, then, increase the size of the poor man's farm, and he will keep on that stock, and the profit that goes to the grazier will go to the producer, and the supply will be kept up, even in increased quantity, and what is sold by the grazier now will be sold in smaller lots by the small farmer; and I say, too, in better condition, because the stock will get more care and attention in the small farmer's hands than in the hands of the graziers, and they presumably will come out in very much better condition. I say, too, as regards sheep, the graziers may say that they are producers to a certain extent. And so are the small farmers. Give the small farmers access to the good land which is kept for the rearing of sheep, and of course they will utilise its possibilities just as well as the graziers did, and will be able to supply, in smaller lots, what the graziers supply in large lots now.

57125. Sir ANTONY MACDONNELL.—What do you say to the argument that it requires a larger run?—I see one gentleman said that four classes of land are required. We here in this part of the country are slightly stock-mad. There is very little fattening land; and they sell at a year and a half or two years' old to the Meath men. There is no such thing here as four classes of land in this part of the country. I am speaking now of the district as a whole, and I say that as a whole this country is able to produce young stock, and leaving on one side the limestone that one sees, that gives the bone, and it has been always remarkable that the graziers have used the land only for that, they first keep them up to a year and a half, and then sell them to the grazier. Give the same land to the farmer and why can't he keep them?

57126. CHAIRMAN.—I do not think you quite followed Sir Antony's question. I do not think his argument was based on the allegation that there were different classes of land in the district, but that on a holding of 200 or 300 acres, which is at present in the hands of one grazier, there may be different kinds of herbage existing on different portions of the land, and it is necessary for the proper prosecution of the grazing trade that the cattle should have a large run in order that they might be able to move during different times of the year from one herbage to the other?—I have a good deal of experience of the graziers in Galway, and I don't know of cattle being confined to a little particular spot in a farm. They have the run of the whole farm, and I say if the farmers get the land they will use it with the object of feeding their beasts and making them fat.

57127. Suppose one man has got herbage which is required at one time of the year, and another which is required at another time of the year, what is to happen then?—You mean like what is called in this part of the country, winterage? Well, winterage is a special area of land that is capable of resisting the cold and holding the grass during the winter months, and people instead of buying hay and paying for labour take winterage. Of course, there are small meadows fit enough for the requirements of the small farmer, but if you give them larger farms assuredly the earth will give a better return, with the result that the breeding will be greatly benefited. So that I think the grazier as an asset to the country could very well make place for the farmer with mixed tillage, and that the intentions of the Act to increase their holdings should be carried out, and carried out by compulsion, I mean where negotiations have failed as regards sale, and where the landlords refuse to sell, the grass lands ought to be compulsorily acquired.

57128. What I want to know is this. You say that you think this grass land should be acquired compulsorily?—Yes.

57129. Well, I take it from what you said before that in your opinion it would not be a fair basis to take the grazing land as a standard of value?—No.

57130. Now, I ask you how you would fix the price?—In asking compulsory powers for the Government I would have Commissioners for the purpose of the Act, solely selected on account of their knowledge of land, and on account of their probity, and I would make them independent of party by making their appointment permanent. I would have the Commissioners keep constantly before their minds that the State is security for the money advanced, and the ratepayers finally responsible for the payment of the annuities; I would have the price estimated on the quality of the land, at what it would reasonably be expected to pay with ordinary husbandry after the maintenance, in suitable circumstances, of a family. Knowledge of land and experience would determine the annuity. I would have the Commissioners deal with the money of the State the same as a stockbroker would deal with the money of his client. If a stockbroker in using the money of his client would look at the seller and the interest of the seller instead of the quality of the stock that he was buying, that man would be a rogue, and if he gives the price of a gilt-edged security for what ordinary experience tells him is subject to risk, he is equally a rogue. And, then, if Commissioners, in dealing with the money of the State look to the income of the seller instead of to what they are buying, they are not much better. Of course, if the land is capable of bringing a price that will give him his net income, by all means give him his net income, but then the price is based not upon net income, but upon the quality of the land.

57131. When you say "based on the quality of the land" I do not quite see how you are to set about doing that unless you proceed by estimating what the fair rent would be if it was tenanted?—Yes.

57132. That is what you propose?—Guarded by the other two things, the security of the State and the responsibility of the ratepayers. I would give the landlord the full price.

57133. Sir ANTONY MACDONNELL.—How would you proceed to estimate it?—By the value of the land estimated by experts.

57134. Take a grass farm which you are proceeding to acquire with the object of dividing it into, say, ten-acre holdings. Would you commence by basing your estimate of the price of the farm on its capacity and usefulness as agricultural land—would you fix a fair rent for the grass farm in consideration that it was to be used as a tillage farm?—I do not quite follow the question.

57135. Here is a grass farm, say, of 1,000 acres?—I would give the price according to the quality of the land.

57136. Quality of the land suited for what purpose—for the purpose of tillage or for the purpose of grazing?—For the purpose of mixed agriculture.

57137. That is to say, having regard primarily to tillage?—What it was best fitted for.

57138. You say that you want to fix a fair rent. There are two ways of doing it, I understand. One way is to take the landlord's net income over a series of years from the grazing land and then to capitalise it at so many years' purchase. Another way of doing it is to determine in your own mind what would be a second term rent for that particular block of land and then to consider whether anything should be added to the second term rent on account of the double interest of the landlord. Which of those two methods would you take?—I would, by no means, give him a price that would bring him in his net income unless judging by the quality of the land it was worth the price.

57139. But would you apply the method of procedure which requires rent as a basis?—No; it smashed all the graziers and surely it is not right.

57140. I understand you to say that graziers have been broken in the past, and that as a consequence of that net income from grazing land is an unsuitable basis on which to calculate. Now, eliminating that for a moment, would you say that with the other system, namely the fixation of what the land is worth for tillage and mixed farming, something should be added for the other interest?—I say that from experience and knowledge of land the Commissioners would be able to fix a just price on that grass land that they would say that that land could fairly pay after allowing for ordinary husbandry.

57141. CHAIRMAN.—That does not satisfy me, because you admit that in grass land which is in the landlord's possession there is what they call a double interest. You admit that?—Yes, I do, but you see if the landlord says, "I have a double interest in that land," I will ask him where did he get it. First and foremost the State gave him that without anything at all. The State wants back this tenant interest to restore it to those to whom it originally be-

Sept. 30, 1907.

Rev. Joseph Alfred Pelly.

longed, and it would not be fair for the State to go and pay an immense price for an interest that they gave for nothing a while ago to the landlord.

57142. It is not a question of a big or a small price but how you are to get at any price at all?—I would let the Commissioners use their expert knowledge.

57143. Sir ANTONY MACDONNELL.—Take this case. A landlord has fifty tenants and buys out the interest of twenty-five of them in their agricultural holdings. Before that he had a right to receive rent from those agricultural holdings, and he bought out those tenants, giving them fifteen, or ten, or twelve years' purchase—that is, he has paid something?—Oh, of course, but that is a different question altogether.

57144. But we are dealing with existing facts. He had already a right to receive rent from those holdings, and he paid a thousand pounds or something for the tenants' intearest, so he paid it for some substantial benefit?—Yes.

57145. And where he has come to acquire that, and now it is in his hands, ought not you to recoup him?—I never intended to cut him out on that.

57146. You admit the principle that he has a right to be recouped?—Well, compensation for disturbance I would call it in most cases.

57147. Call it what you like, but it is a double interest that has to be compensated for?—Yes.

57148. Give us your idea of what should be the measure of the value of the second right?—I consider that this tenant-right, which the landlord got for nothing, ought not to be estimated as if he bought it.

57149. What would you say it should be?—I am not an expert in land.

57150. If the tenants' interest is valued at 18 to 25 years' purchase—and 22 years' purchase is a common thing on second term rents—what should the landlord's interest be valued at?—What I say is that in estimating for compulsion the tenant should have the land at a fair price that would give security, and that he could not pay a competitive rent, but what would I do to bridge over the difference? In order to bridge over the difference between what the tenant should pay and what the landlord demands I would think it right to ask that Mr. Morley's idea should be carried out, and that 20 per cent. instead of 12 per cent. bonus should be given.

57151 You are anticipating. I want first to get at your idea or estimate of what should be the number of years' purchase to cover the landlord's interest?—I could not attempt to say that.

57152. CHAIRMAN.—We do not want to put you in a difficulty, but only to get your idea of how this price is to be arrived at. You tell us that, in your opinion, one system would not work, for the reasons given, and now we go further and say, admitting that for the sake of argument, what is the principle you propose in order to arrive at the price?—My principle in the buying out is centred in the probity and knowledge of the Commissioners, that they should give full value to the tenant to live, and fair value to the landlord for what he is selling.

57153. Mr. BRYCE.—Are you not aware that the judges, over and over again, have said that no principle whatever applies in the fixation of fair rents in Ireland?—Yes, and many queer things have been said.

57154. The Judges of the Supreme Court do not amuse themselves by saying fanciful things?—They know very little about it, some of them.

57155. It appears, from the dissatisfaction that exists in a number of places, that the sub-Commissioners do not know very much about it?—Of course you will find ignorant, as well as very clever, sub-Commissioners.

57156. But if neither the sub-Commissioner who goes on the land, nor the Judges of the High Court in Dublin know anything about the land, who does?—I would be sorry to say that the Land Court as a rule did not know it. Some of them may not, but I should at present take a sample of the valuation of the sub-Commissioners. We think they know the land and that they are honourable men; and from what I know of those men, with whom I have had intercourse, I say that they are intent on doing justice.

57157. Are you aware that Mr. Shaw Taylor the other day at Loughrea complained that when he went to the Court to have a second term fixed it was raised 10 per cent. on his own improvements?—I happened to be present in the Court in Galway when Shaw Taylor's case was tried. He brought up two valuers there and there was over £107 difference, I think, between the valuations of the two valuers; and a whole lot of things that I saw put in by Mr. Shaw Taylor as improvements for which he claimed were only the ordinary good use of the land.

57158. Sir JOHN COLOMB.—That makes it worse, that a price was put on things he did not do. Therefore the 10 per cent. that he complained of, according to you, was put on something that was not there at all?—It does not necessarily follow. It might be put on for something else. I say that from what I heard in Court the judge did not believe that there ought to be anything given for improvements.

57159. CHAIRMAN.—I do not think there is much use in pursuing this. I understand that you are not really prepared to say more than that you would like to leave it to the Commissioners to fix the fair value?—Yes.

57160. Now, having acquired this grass land, I want to ask you this further question, who are you going to give it to?—First, I would be for giving it to the evicted tenants, and I make no distinction there between Plan of Campaign tenants and other tenants because I was through the whole of the business in Ballintubber district and I was about their holdings, and I know the circumstances pretty well, and I was adverse to the Plan of Campaign, and got into a little trouble over it at the time with the people; but no matter what may be said about the principle I know how the tenants on the Clanricarde Estate suffered at that time, and Mr. Arthur Balfour, when it was brought before him, acknowledged it.

57161. You take the evicted tenants. Then, what next?—Those having uneconomic holdings, and as regards those that belonged to an estate which has been purchased and on which there is untenanted land. I presume at least that those who originally held the land on that would have the first claim on it.

57162. In the district?—In the district and occupying that estate first. And then, after these, I certainly would put the congests, migrants, before the sons of farmers. I know that is not popular, but I do not think philanthropy should be confined to parish boundaries, and I would relieve the misery that exists before I would give prosperity to others.

57163. You thus would relieve the congestion and poverty of an estate?—Yes.

57164. And, I suppose, of a neighbouring estate?—Yes, but not by bringing migratory tenants from a distance to places where congestion already existed.

57165. You would relieve the local poverty first?—Yes.

57166. And, having done that, if there remained a balance of land would you consent to relieve the poverty and congestion of the West before you would consent to any further distribution among the sons of tenants?—Yes, I would. I know that is very unpopular, but I say that it is a big National question, and that family interests ought not to be considered before the National question of driving the poverty away.

57167. You say that is an unpopular view. I may say that I agree entirely with your view, but do you imagine that men of influence like yourself in the locality would have power enough to get your neighbours to accept that view?—I think so. Of course the people's personal interests are always uppermost in them and warp them immensely, but I think if the matter was put before them they might growl at it, but they would agree.

57168. Would you not agree to this, that the present demand for the breaking up of the grass lands is fully justified on account of the congestion which exist?—Oh, yes.

57169. You admit that?—Yes.

57170. If, therefore, from the parochial point of view the congests are debarred and the land given to sons of tenants is it not unfair, and dishonest even, that that argument that the grass should be broken up for the relief of congestion should be any longer relied upon?—It would be wrong. There is another thing, and that is the machinery for working it out.

We have two departments, the Congested Districts Board and the Estates Commissioners. I see that was brought before you in Loughrea, and all I have to say is that in this part of the country the people have no confidence in the Congested Districts Board. Of course, I am not going to criticise the Congested Districts Board. I know nothing of it in its big operations, and therefore it would be impertinent in me, but to judge from the activities which it has extended to this part of the country the Congested Districts Board has been a failure, and it has impeded the work of the Estates Commissioners. It has bought four estates in the district. One of them near Woodford, the Slatefield Estate, was bought several years ago. The houses have been built for two or three years, perhaps more, and the land divided, and although it is in the very centre of the poorest scheduled district they have not been able, in all these years, to get a solitary tenant to take a house and land on account of the high annuity payable.

57171. Sir ANTONY MACDONNELL.—You say the Congested Districts Board impose a higher annuity?—In the instance that I am giving. I am speaking only of Slatefield.

57172. Is there anything in the fear that migrants have that if they came there they would be ill-treated?—We asked migrants from 500 yards away, in the midst of the scheduled district called Derryclare, and not one of them would come.

57173. With relation to the Oatfield Farm, that has been in the hands of the Board for some time?—It has, for some years.

57174. Does your information bear out the following account, that when the proceedings were in progress, before the Oatfield Farm could be occupied some dissatisfaction was expressed at the probability that it would become vested in the Congested Districts Board, and when the proceedings were carried out the people from the neighbouring farms entered on the farm under the guidance of the clergyman, and they parcelled out the farm into convenient takes, suitable for applicants for land, and having done that they reported to the Congested Districts Board, and asked for confirmation of their action. The Congested Districts Board had bought the farm for the purpose of migration, and before they could deal with the farm it had been portioned out. Does your local knowledge confirm that account?—I heard something.

57175. What can the Congested Districts Board do if it buys land for the purpose of relieving congestion, and if a local clergyman parcels it out without leave from the Congested Districts Board?—Oh, I did not hear that. I never heard that before.

57176. I ask you this, do you think that land acquired for the purpose of relieving congestion should be distributed and given to the first-comers, or should not there be much care and deliberation exercised in choosing the migrants that were to be brought from sixty or eighty miles distant to be placed in new surroundings?—I know Oatfield, and there are congests about it, and I think the Congested Districts Board might find poorer men round this place for relief.

57177. I am quite with you; but do you not know that at the present time the law does not allow that to be done. The law at the present time, as stated in Section 75 of the Act of 1903, restricts their power in that respect?—I understand that.

57178. For the present, the Congested Districts Board cannot relieve local congestion, and I entirely agree with you that the law ought to be amended on that point. But such as the law at present is, do you not think it rather hard that the Congested Districts Board's hands should have been forced in the case of the Oatfield Farm before they were prepared to make a distribution?—Well, they had two years, and I don't think there was any great agitation against it; and what brought about the agitation was the example of the Estates Commissioners settling down things so well around them, and the contrast between their action and that of the Board.

57179. It is explainable, but the objects of the two Boards are entirely different. You see, the Estates Commissioners, when they have become purchasers of an estate, proceed to distribute it, but it would not be open to the Congested Districts Board to do so; and that difficulty will continue as long as the two Boards are acting. Consequently, what would you say ought to be done?—I would not have two buyers in the same market, each anxious to show their superior activity in acquiring land. But when the Congested Districts Board have done good work, and where others have not done it, I would increase, if possible, the facilities for doing more good work, but let them deal with nothing outside the congested districts. I would make the Estates Commissioners supreme for the purpose of buying land outside the congested districts.

57180. And what would you do with the Congested Districts Board?—I would give them full powers to carry out their functions.

57181. What would you say to a proposal that all land, whether within or without the congested districts, should be purchased by one body—the Estates Commissioners?—I would leave the Congested Districts Board to work their own corner, but I would not allow them in on the preserves of the other body, running up the price of land by becoming buyers in the same market. And we have experience that the landlords would rather have the Congested Districts Board on account of the price.

57182. I think you may take it from me that in the Province of Connaught there is not sufficient untenanted land to relieve the congestion of the Province of Connaught. That being so, would you exclude the Commissioners altogether from any power of operating in Connaught?—Oh, no; I think that where individual care is required, as in other parts of the country, they have quite enough to do.

57183. In the Province of Connaught, outside the congested districts, but still within the Province of Connaught, do you mean that all land bought by the Estates Commissioners should be ear-marked for the purposes of the Congested Districts Board?—I would settle, not all the parties, but the evicted tenants and the uneconomic holdings of other tenants. I would say that.

57184. CHAIRMAN.—Do you suggest that local congestion should be relieved by the Estates Commissioners or by the Congested Districts Board?—By the Estates Commissioners.

57185. And after that the balance of the land should be handed over to the Congested Districts Board for distribution among congests?—Yes.

57186. And then you would have in the same area, and on the same estate, two different bodies carrying out redistribution work. First of all, the Estates Commissioners buy the land?—Certainly.

57187. And, then, having done that, the Estates Commissioners would relieve local congestion?—Yes.

57188. And, then, having done that, the balance of land on the same estate would be handed over to the Congested Districts Board?—I see the difficulty you are putting me into; but, at the same time, they might relieve local congestion, except in cases like Pollock's big ranches.

57189. As a matter of fact, would not your point be perfectly well met if you separate the areas over which the two bodies could act?—Yes.

57190. If you eliminate competition between the two purchasers, does it matter to you whether the Estates Commissioners or the Congested Districts Board buy the land?—I have seen the work of both, my lord, and I am giving my opinion that the Estates Commissioners ought to have the buying of the land; and where they settle uneconomic holdings they certainly, from my experience, save the ratepayers here.

57191. Would not you agree that absolutely the improving and distributing authority ought to be the purchasing authority?—Yes, if you have separate areas.

57192. Sir JOHN COLOMB.—You have given us the history of a certain estate, the origin and commencement of the history being in the Incumbered Estates

Sept. 30, 1907.

Rev. Joseph Alfred Pelly.

Court. Now I see you have got many documents, going back very far. Can you give the Commission, or do you happen to have, any of the advertisements issued by the Incumbered Estates Court to induce people to come in to buy property with a statement that the lands were let too low, and rents could be raised, so as to bring in the shopkeepers and others with capital?—I have no document that would show that. The only document in connection with it is this—the rental and particulars of sale of the Eyrecourt Castle Estate, sold by auction in the Incumbered Estates Court on the 27th of June, 1854.

57193. May I put it to you generally in this way, as you know so much about that time? Was it not the common practice of the Incumbered Estates Court in giving notice of sale to give a schedule or rental, and then to put a notice such as this: "These rents are very low, and they can be largely increased," and that sort of thing? Do you remember?—I have heard it. I have no document that would prove it.

57194. You have spoken of the mania for land. That still exists?—It does.

57195. And for the reason that you gave, namely, that there is no other outlet for investment, I presume that you look to the probability of the mania for land continuing?—Yes. Well, of course, when the people are supplied with a sufficiency of land the mania will cease.

57196. But you gave instances, very interesting and important ones, of people such as shopkeepers and others who were not connected with land, who had a mania for land and bought it?—Yes.

57197. Now, I want to know, assuming that the policy is carried out to the full of all the land in Ireland being resettled in economic holdings, do you apprehend any danger in this mania for land still continuing, for we know very well that such is human nature, that some annuitants will get up earlier and work later than others, some will be thrifty, and some will not; and now the mania continuing, do you think there is any danger of shopkeepers and others with capital going in and purchasing out the annuitants?—Yes; I consider that possible unless it is guarded by some legislation that would prevent a man being given that land.

57198. Now, my object was to lead you up to ask you for your opinion, what form legislation should take to prevent such men, this mania for land still continuing, from being able to purchase out the tenants and thus get back to the old state of things. Can you give the Commission any indication of your view as to what form legislation should take to prevent that from happening?—It is only an opinion, and I have not thought very much on it, but I fancy that legislation might make the present occupier merely a life tenant with remainder to his children, or in some form of that kind, so that he could not borrow on it or mortgage it for his life interest. I think that would help the present man and the family, and it would prevent money being advanced which might afterwards swamp the tenants.

57199. You dwelt so strongly upon what happened in the past. But would you go so far as to prohibit the shopkeeper or solicitor or anyone else from buying the holding of an annuitant who has failed—would you prohibit the shopkeeper?—I do not think it would be possible to restrain liberty in that way.

57200. Then you admit the possibility?—There is a possibility, but I am afraid I could not offer an expert opinion as to the remedy for it. Of course, I see the possibility of the danger, but I am not able to apply a remedy.

57201. Do you attach very great importance to the question of preventing such a thing in the future?—Oh, certainly.

57202. There is only one other general question I wish to ask you on the subject. Where the State is carrying out a policy for the general benefit of the nation—we will take the landlords and the tenants as the two classes composing it—do you think that the State is justified in inflicting personal loss upon either class in carrying out that State policy—do you think any class or any individual should bear that loss, or do you not think it is right and proper and only just that if any loss is to be incurred it should be borne by the general community?—I think the State, as having the ultimate ownership and *altum dominium* of all that land, did in the past give to the landlord the tenants' interest without any compensation to the tenant, and I do not see where the injustice would come in. And, suppose the State came in and said, "You have enjoyed that tenancy, which I gave you for nothing, for so many years, and I must have it back by right of my *altum dominium*."

57203. You can give a better answer to my general question. If the carrying out of a general policy for the benefit of the State involves a loss do you think the State ought to bear it or do you think that an individual or a class ought to bear it?—I think in the case which is in your mind, that of the tenants and landlords, my opinion, in order to bridge over what would give a sufficient annuity to the State out of the land in possession of the tenant, and what the landlord might claim as his right, it would be right of the State to act on the principle expressed by Mr. Morley I think at the time of the passing of the Act. In the case of an untenanted farm itself, the landlord might not suffer such a great loss, but the State might give 20 per cent. bonus instead of 12 per cent. But I should hold that the tenant in all cases should never be burdened except indirectly for the holding; that the tenant's annuity should not be touched by any compensation that is given to the landlords in that way.

57204. But if there is a difference, on an equitable review of the whole circumstances between what is fair to the landlord and what would be fair to the tenant, do I understand you to express an opinion that it is just that the State should bridge over the difference?—As far as it is just and equitable. There is another question—from whom should I take the land? I would take up the eleven months and yearly takes where there was no resident tenant. I would take up the outside farms that are used merely for grazing purposes, that would not be necessary for the carrying on of the demesne that was in possession of the owner.

57205. CHAIRMAN.—Grass farms?—Grass farms. And I would take up certainly from the landlord the grass land that he took into his possession for the avowed purpose of defeating the intentions of the Wyndham Act.

57206. Now, reverse the position. Supposing that the grass farm is in the demesne and that the tillage farm is outside the demesne?—Oh, by all means, what is necessary. I would leave him what is necessary for the accommodation of the demesne or what would be worked in conjunction with it.

57207. Then you would not say that you would limit the landlord's possession to the demesne wall. If he could prove that there is a farm outside which is used in connection with a farm inside, would you leave him that?—"Used in connection" means used in mixed farming, I suppose.

57208. I understand that in many cases there are two farms worked in this way, one outside and one inside the demesne. Your illustration assumes that the grass land was outside and the tillage inside?—Yes.

57209. I have known localities in which the reverse was more often the case, the grass land inside and the tillage outside?—But I would allow what could reasonably be expected for the accommodation of the demesne. Mr. Tener, yesterday in Loughrea, spoke of home farms, but there were no lands which could be utilised for evicted tenants except home farms. A home farm, if I understand it rightly, is a farm that can reasonably be expected to be used in connection with the demesne. Now, in the case of the Clanricarde estate the demesne consists of 1,398 acres, and there is a strip of farm outside the demesne that is held. These were used as home farms, but besides this there are, two miles away from it, Deerpark, 110 acres, with three farmers; Drumscar, 352 acres; and there is in Moorfield a farm of Tom King's, and near Lockstown a farm occupied by E. Ferry; and another farm of nearly 300 acres also. And when Mr. Tener says there is nothing but home farms available, he considers these all home farms, though they have not

been used in my memory for at least forty years, I mean in connection with the demesne. And I think that was not quite correct.

57219. Mr. BRYCE.—You said that you would not give the landlord anything for his occupation interest?—I say that the State should make it up for him.

57220. Would it not be fair or would it be fair, in your opinion, to ask the incoming tenant anything for that occupation interest?—No, sir; but I would put an annuity on the land that the land could fairly pay, and the capitalised sum representing that annuity would, I expect, go very near paying for the two interests in the land.

57221. But the moment you give the land to the tenant, he can sell that land away and he can get something for nothing?—He had it before. It is only restitution he gets.

57222. Some one may have had it sixty years ago, but it does not follow that it is the same man exactly now?—I say that the landlord should have the value of the land. I say that a fair price should be given to the landlord for the use of the land, which is all he has to sell. You have to sell to the tenant, and you must sell to the tenant at a price that will make the State safe.

57223. If you put the tenant in he immediately acquires an interest that he can sell for a considerable number of years' purchase,—He does, but he has bought it on giving the value of the land.

57224. Is it not fair that the State in readjusting the land should consider that and charge something for it?—I say let them charge what they like provided they put a fair rent on the tenant.

Sept. 30, 1907.

Rev. Joseph Alfred Pelly.

57225. Sir ANTONY MACDONNELL.—And the fair rent would be what was fair in the opinion of the Estates Commissioners?—Yes, expert knowledge guided by high principle.

57226. The Estates Commissioners are to be the arbiters in the matter?—I think you can never find anything better.

57227. We start with the annuity as being the guiding principle in everything?—Yes.

57228. You would fix the annuity, and having fixed that, anything above that which should be given to the landlord ought to be provided by the State?—Certainly. I was asked to draw attention to the drainage as a great hardship on property transferred to tenants and to draw attention to the Report of the Drainage Commission of Ireland in which they say that the non-productive part of the works that were carried out under the Act of 1863 represents £133,333. Before 1863 the State bore all the extra expense, and after 1863 they did not.

57229. CHAIRMAN.—Are not you now rather speaking on behalf of someone else?—Yes.

57230. Mr. Talbot Crosbie, I think?—Yes.

57231. I think we can hear Mr. Talbot Crosbie himself?—That would be very much better.

Miss ROSE ANNE GRIFFITH examined.

57232. CHAIRMAN.—You are instructress at the Lace Classes in Carraroe?—Yes, my lord, I was until August last, and now my sister is in it.

Miss Rose Anne Griffith.

57233. I think you have read, have you not, some of the evidence that was given at Oughterard by Mr. Patrick Naughton?—Yes, my lord.

57234. Evidence with regard to your lace classes?—Yes, my lord, I have.

57235. I understand that you would like to contradict some of the evidence then given?—Yes.

57236. Let me take you through. Mr. Naughton first said that in his opinion girls were brought down from Donegal to Carraroe, were trained in your lace class, and were then employed as teachers in the Carraroe district. What have you to say to that?—Yes, my lord; I was brought from Donegal to Carraroe by the Congested Districts Board, and was instructed by the French girls who introduced that work to Carraroe.

57237. But then Mr. Naughton assumed that others besides you were brought down and employed as instructresses. Is that so?—My sister was brought from Donegal, too, and she was in another school, in Lettermore.

57238. Anybody else?—That is all from Donegal, from that district.

57239. Were you both qualified lace workers—were you both instructed lace workers before you were brought to Carraroe district?—We were qualified to teach in other industries, but not in this specimen of lace we are now teaching.

57240. Did you both learn your business in Carraroe?—We learned to make this special curtain lace there.

57241. Under whom?—Under the French teachers brought there by the Congested Districts Board at first.

57242. Is there any proposal to continue migrating girls from Donegal to Carraroe to train them at Carraroe to make them instructresses?—No, my lord; I did not hear anything about it.

57243. Mr. BRYCE.—But you did know a certain class of lace manufacture before you went to Carraroe?—Yes, I did.

57244. Sir ANTONY MACDONNELL.—And this particular kind of lace instruction given in Carraroe was not given largely?—Well, it was introduced by the French. Carraroe was the first school in Ireland in which there was this specimen of lace.

57245. Sir JOHN COLOMB.—Do I understand this to be the position, that you came as a qualified teacher in certain kinds of lace-making to Carraroe from Donegal?—Yes.

57246. And then there was going to be an improvement or change or development when French teachers came to teach?—Yes. We came as pupil teachers.

57247. And you then and your sister learned from those French teachers or qualified in their branch of the lace-making?—Yes. We were qualified in other industries first, but it was this industry that was introduced by the French ladies to Carraroe.

57248. That was superadded to the lace-making that you came there to teach?—I came as a pupil teacher to learn this work and then to teach it.

57249. Mr. KAVANAGH.—Were there any Galway pupils at the same time?—There were two Mayo pupil teachers at the same time.

57250. No Galway girls?—No, sir.

57251. Did the two Mayo girls get positions elsewhere?—At Lettermullen, Co. Galway, and at Kilkerrin, Co. Galway.

57252. There were no Galway girls at the same time who could take your position?—They might be able to do it, but having no previous training they were not appointed.

Sept. 30, 1907.

Miss Rose Anne Griffith,

57253. Were they qualified?—No.

57254. Sir ANTONY MACDONNELL.—Were there any Galway girls in Carraroe school as advanced as you were when you went to Carraroe?—No; I do not think that the Galway girls knew about industries at all until this one was started. When we went there we went as pupil teachers.

57255. CHAIRMAN.—They would be unlikely to bring a girl from another county to your place. Girls have often been sent from other counties to Donegal to teach industries there. Then you started as teachers. Mr. Naughton, in his evidence, said—"These girls were imported into our district, trained in our school, and placed as mistresses over pupils better than they," and I asked him for the names, and he said there would be a difficulty about giving the names because some of those girls were married. Have you known any cases of that kind, where girls were brought down from Donegal and trained in the school, and then become mistresses and then were married?—Yes, my lord; my sister has got married. It is since she has got married that she and I exchanged classes. I was teaching in Carraroe till she got married, and she was teaching in Lettermore. Now she is teaching in Carraroe and I am in Lettermore.

57256. And then, really, it only affects you two. Then Mr. Naughton said there was a question of audit. What is the system of your accounts—are they audited, do you know?—Yes; we keep an account of everything that is done in the school. All the money received for the work is paid to the workers weekly, and the account is kept in the school, which my books can show.

57257. Who looks over those books?—Mr. Walker, the Inspector, when he calls round.

57258. Has there ever been to your knowledge any suggestion made by the girls of your class that the money obtained for their lace is not distributed amongst them, but is appropriated by yourself or other teachers?—No, my lord; they never said anything of the sort to me. I asked them if they had any suspicion about it, and each of them said "No."

57259. Has there been any dissatisfaction in the class at all with regard to payment?—They raised the same suspicion about it when Mr. Wissmer was there; he had the same difficulties to contend with, and Mr. Walker then told them they could at any time see that the amount paid them for their work was the full amount received for the work.

57260. Then you tell us that they are not suspicious?—They told me that they were not suspicious.

57261. But you think they might be all the same?—They might say it to outsiders. I do not know. Each girl has a pass-book, so that she can see what she receives for her work, and the same amount is marked in the cash book and the same marked in the weekly return that is sent to the Congested Districts Board, and the sum total corresponds to the total amount of money orders received, as shown by invoice book kept in school.

57262. Sir JOHN COLOMB.—You send a weekly copy of your accounts?—Yes.

57263. And Mr. Walker inspects them on the spot as well?—Yes, if he is at the office of the Congested Districts Board, or here when he calls.

57264. And all the accounts are sent up weekly to the Congested Districts Board to be examined?—Yes, all accounts of money paid out. And a monthly statement is sent to the Board of all money received for work during each month.

57265. CHAIRMAN.—Mr. Walker visits the school pretty often?—He does.

57266. Have those girls ever laid any complaint before Mr. Walker, or told you to bring it before Mr. Walker, about their claim of payment?—No.

57267. Mr. KAVANAGH.—Has there been any falling off in the earnings lately, or do they earn about the average?—Last year we did not get enough of orders to keep the girls in constant employment. We could not help that.

57268. But that reduced their earnings, of course?—Yes.

57269. CHAIRMAN.—Do you purchase any material or that kind of thing, from some one in France, probably?—No; we had nothing to do with the purchase of the materials. Mr. Morton sends us the order and the materials wherewith to do it, and he takes the goods again and supplies us with the money to pay the workers for them.

57270. Is that Mr. Naughton the gentleman who gave evidence—he has a shop, has not he?—It is Mr. Naughton, shopkeeper, Carraroe, who gave evidence, and Mr. Morton, of Darvel, in Scotland, who sends us the orders and materials.

57271. Do you buy any materials at all, or is there an account between your school and that shop?—No, none whatever.

57272. Any account between your school and the other shop?—None whatever. All the material we get into the school is sent by Messrs. Morton, and I think it is manufactured in Germany.

57273. Has there been any jealousy on the part of local shopkeepers that you are not getting any materials or anything from them?—No. All the material we get into the school is sent by Mr. Morton, and I think it is manufactured in Germany.

57274. Is there anything that you would like to say more than that?—No, my lord; I have got nothing to say to anyone further.

The Right Hon. The Lord ASHTOWN examined.

The Right Hon. The Lord Ashtown.

57275. CHAIRMAN.—You are nominated by the Landlords' Convention?—Yes.

57275A. Will you tell us what you have to say?—I am a resident landlord in County Galway, a farmer on a large scale, and a large employer of labour. I wish to give some evidence as to the probable effect of general breaking up of the grass lands in the West of Ireland. Roughly speaking, the present system of cattle-raising in Connaught is as follows:—(1) The small farmer breeds the stock; (2) the store grazier of Connaught buys the young stock from the small farmer; (3) the store grazier, after a year or a year and a half, passes them on to the Leinster graziers who finish them. The breaking up of the grass farms on a large scale would mean that the market for the young stock of the small farmer would disappear, as the Leinster graziers would not buy stock which were not at least two years old.

57276. Sir ANTONY MACDONNELL.—Do you follow this procedure yourself, Lord Ashtown?—I breed all my stock.

57277. There is a tendency then, is there not, to bring the stock to maturity at as early a stage as possible?—Yes, quite right.

57278. You follow that yourself?—Yes.

57279. You get rid of yours about two years old?—Under a year mostly.

57280. Then, if that be so, and if it be true that small farmers keep stock up to two years old, as we have been told they do, would there be any difficulty for small farmers, if their farms were sufficiently large, to do what your lordship does?—I think

so, for this reason, that they do not understand the care of the stock. They absolutely neglect their stock. They would not keep them in sheds and houses like I do.

57281. If all those things were procured, and if they had sufficient knowledge, they might do all that you do?—There is no reason at all that they should not if they had the knowledge; but you have to get the knowledge first.

57282. But there is nothing in the nature of things to prevent a small farmer with, say, thirty to forty acres and having sufficient knowledge doing what you do?—But you have to get the man with knowledge first, and it is very hard to get him, and with capital, too. You would want a far larger amount of land than the small farmer has now. You would want a lot of land.

57283. Sir JOHN COLOMB.—Would the thirty or forty acre farm referred to by Sir Antony provide that—you must have good land, arable land?—I do not think he would want all arable land for it, but he could not do it on forty acres or anything like that. The whole system of farming would have to be changed. It would take years to educate these small farmers into adopting such a change, even if they could afford to do so. This a serious question. It is hard to believe that the Act of 1903 contemplated such a sweeping change. You should not seriously disorganise the staple industry of the country until you have something as good or better to take its place. In going fully into this question it must be borne in mind that there are four large and distinct classes of grazing land in the County Galway:—(1) Deep, heavy grass lands, which never could be profitably tilled; (2) light land on limestone rock, with the rock generally near the surface, and often jutting out from the soil. Tillage on such land is impossible, but it is most valuable for the classes of stock suited to it. On this I speak from experience, as I farm about 1,200 statute acres of land of this character; (3) land, chiefly in the East Riding of Galway, which could be tilled, but is far more profitable in pasture; (4) land, chiefly in the West Riding (excluding Connemara), which would be improved by tillage; but this and the preceding class of land would be most profitable if used for mixed farming, of which the chief object would be the raising of stock, as the western climate is too uncertain to enable farmers to depend on raising corn crops profitably. To carry on mixed farming profitably the farm should be large, the farmer a man of capital and experienced in stock-breeding. The system would mean the employment of many labourers, giving work both to men housed on the land and to small men living elsewhere in the neighbourhood. But it must be remembered that by doing away with so-called uneconomic holdings you decrease the supply of labour in the district, as a man with what you call an economic holding would have no time for other employment. The general breaking up of grass lands in the West would seriously injure stock-breeders in both the South and the West, as there is a large import of calves from the South into the West, and Western graziers often go to the South to make up their lots. It would also seriously interfere with the horse-breeding industry in Connaught, as all the good horses are reared on the grass lands. It is well known to breeders that horses cannot be properly reared on small runs. The same principle applies to sheep farming. Small farmers have neither the money nor the enterprise to use good sires, and all classes of stock would steadily deteriorate. If the Government decide on a widespread system of breaking up grass lands, and enlarging small holdings, they ought to take steps to be supplied from year to year with accurate information as to how these purchasing tenants are using their farms. I believe such information used to be furnished by the Royal Irish Constabulary, but that the practice has been discontinued for some years past. I have endeavoured to obtain this information in respect of several large grazing farms in my neighbourhood, which have been acquired by the Estates Commissioners or the Congested Districts Board, and have been divided mostly for enlarging existing holdings, and in a few cases for creating new holdings I find there is very little tillage. Most of the new land has been sub-let for grazing, or meadowed, and the meadows sold by public auction. In some cases where the tenant works the new land himself he tills only a very small portion, and in some of these cases he has turned the formerly tilled land of his old holding into grass. I am not surprised at these small tenants using their enlarged holdings in this way. It makes their lives easier and less laborious, and they find also that the land pays better in grass than in tillage. But the result, of course, is that, instead of creating a hard-working and a more industrious peasantry, this system is steadily creating a class of small proprietors who sub-let their land for meadow or grazing, and do little or no work themselves. In fact they are perpetuating the grazing system which it is desired to abolish, but in its new form they charge rents which are at least double what the landlord used to charge. Most of the land in these sub-divided areas is deep, heavy land which I have described as Class (1) (portions of it wet), not suitable for tillage, and this land could not be used to full advantage for stock-breeding without being worked in conjunction with land of the lighter description, which I have described as Class (2). But it is clear that small men cannot do this. Passing next to land of the Classes which I have described as (3) and (4), if this land is to be divided, care should be taken that it is only given to men who understand farming, and farm their land well, and it should not be given indiscriminately to men who are hopelessly bad farmers and are much in arrear with their judicial rents. In cases where farmers are considered deserving of additional land, but have no capital to work it, the necessary capital should be found for them by State loans or free grants, as no man can do justice to land without sufficient capital to work it. I don't approve of giving holdings to tenants' sons. It only tends to multiply very small holdings, and to prevent young men doing better for themselves. If it is attempted to migrate small tenants, say from the sea coasts or other districts, to be placed on grass lands elsewhere, care should be taken (if they agree to migrate) that they understand agriculture suitable to their new holdings, and that they are provided with sufficient capital, stock, and farming implements. The consequences of adopting on a large scale a new system that would not work would be so serious that the Government should proceed slowly, and not break up a great existing system until they are sure that their new proposals will prove successful and beneficial. If the whole system of farming is to be changed Parliament must realise and face the necessity of educating the people to carry out the proposed new system. They must be taught how to fatten their stock; they must be provided with suitable farm buildings; and steps must be taken to insure their stock being well-bred. It seems a mistake to try and increase the population without first making sure that the proposed system will work, and will enable them to live and thrive. It would be far better to encourage capital to come into the country by every possible channel, instead of legislating to try and give effect to mere popular theories. If capital could be attracted it would soon increase employment, and thereby result in the population increasing also. If many of the proposals now advocated are carried out, the bulk of the landlords will have to leave the country and take their capital with them; the bulk of the graziers, who are the backbone of agriculture and are also the men of capital among the farming classes in the West, will be driven out also; the last state of the country will be worse than the first, and the country will become bankrupt. Resident landlords should be encouraged to remain in the country. They give employment, and where they farm their own land their example is an education to the smaller farmers round them. Thanks to Acts of Parliament, a landlord has now only two inducements to remain in Ireland—(1) farming his own land, and (2) sport. The working of the Act of 1903 is rapidly taking these inducements from him. For these reasons grass lands are specially valuable to landlords who desire to continue resident in the country. It seems to me the system of the Estates Commissioners in buying grass lands to endeavour to obtain them at prices much below their value to the vendor. They say these low prices are necessary to enable them to re-sell the land to small tenants without prospect of loss. This admits that either these tenants are not competent to work the lands profitably, or that the land is more profitable when kept in grass and in large divisions than in small holdings. If the State wishes to carry out what

Sept. 30, 1907.

The Right Hon. Lord Ashtown.

I regard as a backward policy it should in equity pay the landlord a price based on the rent which a solvent and thrifty tenant would pay for the land if the law were enforced and the rights and property of the individual protected. It appears to be also more or less the practice of the Estates Commissioners to purchase grass lands where there has been gross intimidation, by which the letting value of those lands has, of course, been reduced. This practice is most unfair to the landlord and the grazing tenant, and it does not redound to the credit of any Government. It is simply utilising an Act of Parliament to plunder the loyal and thrifty classes of the population in the vain hope of keeping the country quiet, quite forgetting that the large sums of money already spent under various Land Acts have done little or nothing to allay agitation in many districts. I feel confident that, if grass lands were paid for at fair rates, taking into consideration the landlord's dual interest as owner and occupier, sufficient land could be obtained for enlargement of small holdings or migration of tenants in all cases where either of these processes was desirable. If a landlord is selling tenanted land he sells little more than his income from judicial rents. If he sells untenanted land he sells a property, which includes not only the income or annual profit which he may be deriving from it, but also his proprietorial rights, which are often of great value. Moreover, compulsion cannot be logically advocated as long as land is being voluntarily sold quicker than the State can pay for it. Some of the witnesses have said that most landlords in the West of Ireland have spent little or nothing in improving or developing their estates, and that the tenants' rents are not well paid. I know that the contrary is very largely the fact. As regards my own estate in Galway I hand in tables,* showing both the expenditure on improvements and the payments of the rents. But while I know that many Irish landlords have spent large sums in trying to improve estates consisting of very small holdings, I know also that landlords in England and Scotland are not expected to make, and, as a matter of fact, do not and would not make such improvements as these witnesses refer to on estates of this character in Great Britain. I don't know about the North of Scotland. The reasons for this fact are the same in both Ireland and Great Britain. Practically they are two—(1) it would cost nearly, and perhaps more than, the value of the fee simple of such small holdings to erect substantial houses and offices on them, and (2) the tenants would not, and could not, pay such rents as would recoup the landlord for such expenditure. The highest authorities, both in Ireland and England, including leading Liberal statesmen, have recognised these facts again and again. So long ago as 1845 the Devon Commission, in their Report drew attention to this matter, and stated that "the smallness of the farms," together with other circumstances, rendered "the introduction of the English system extremely difficult, and in many cases impracticable." Again, in the debates on the Irish Land Bill of 1881, the Attorney-General for Ireland (Mr. Law, afterwards Lord Chancellor) said—"There were about 500,000 small tenancies spread over Ireland, and it was plain that the necessities of the case forbade the landlords making the desired improvements." (*Hansard*, vol. 261, pages 1701-2.) In the same debates Mr. Shaw Lefevre (now Lord Eversley) said—"Where the system of cultivation of a country was that of small occupiers it was wholly impossible for the landlord to effect the improvements, to build the houses and the homesteads, or to reclaim the land and to maintain the general equipments of the farm. To attempt to do so in the English system would be to ruin the landlord, and would involve him in expenditure of more than the value of the fee." (*Hansard*, vol. 260, page 1597.) Later on, in the House of Lords, Lord Spencer showed the position created by this state of things, and the differences which it necessarily caused between the land system generally followed in England and the Irish land system, in these words—"In England we have a system of large farms where the owner finds almost all the capital necessary to work the farm. In Ireland we have a system of small farms where it would be perfectly impossible for the landlord to do this work." He then quoted examples, and proceeded in these terms—"The landlord would be ruined if he attempted such a thing without charging interest on his outlay, and the tenant would be totally unable to pay such a large addition to his rental. The fact is that rent represents different things in the two countries. Speaking roughly, in England it represents the value of the land and the interest of the landlord's capital spent on the land. In Ireland it represents only the letting value of the land." (*Hansard*, vol. 264, page 349.) I have submitted these expressions of opinion to show that no Irish landlord could be fairly blamed if if he did not make expensive improvements on these small holdings. Any improvements should be made by the tenant, and for nearly forty years past (ever since the Act of 1870) Parliament has been passing various Acts to protect or compensate him if he makes them. As to so-called economic or uneconomic holdings, I consider that it is not necessary that every farm should be valued at £10 or £12, or any other fixed valuation, to make it an economic holding. A very small holding would be quite economic if the tenant and his family have other sufficient means of living, derived from such sources as local employment, migratory labour, jobbing in small stock, etc., etc., In fact a very small holding, with such additions, would be far more desirable and profitable for the tenant than a much larger holding without them. It would, in my opinion, be a mistake to enlarge any small holdings, where the tenants or their sons can obtain employment in the neighbourhood. it would abolish the local market for labour, and cause land to be badly farmed, and compel many owners and tenants who have land suitable for tillage to lay it down to grass. That I know to be a fact. A lot of so-called uneconomic holdings could be made economic if the tenants would only work, and take an intelligent interest in their land. The outcry about uneconomic holdings in the West is largely due to the fact that the land is held by tenants who will work no more than they can help, and appear to have no ambition to improve their circumstances by any efforts of their own. In conclusion, I think (1) that the division of grass land, the enlargement of holdings and migration should be worked cautiously and gradually, and that all agitation intended to force the pace should be discountenanced, and where it assumes illegal forms should be summarily suppressed; (2) that every possible encouragement should be given to residents, both owners and tenants, to employ labour, thereby giving employment to small tenants and their families, and teaching them how to work land profitably; (3) that, where possible, local industries should be encouraged or started, to give employment to the occupants of uneconomic holdings. It is hopeless to expect that either of these last two points could be generally carried out unless the state of the country is such as would tempt people to invest capital in local enterprises, and unless theoretical legislation is discountenanced.

57284. Sir ANTONY MACDONNELL.—You say that in order to carry on mixed farming profitably the farm should be large and the farmer a man of capital and experience in stock-breeding?—Yes.

57285. Are you acquainted with the circumstances of the County Wexford?—It is different land altogether in Wexford from what you have here.

57286. You are aware that the majority of the farms in the County Wexford are of moderate size, and it is about the best farmed county in Ireland?—I know; but it is all different land, and different people, too.

57287. But at all events you will admit that you have good farming and efficient farming on moderately sized farms?—If the land is suitable for tillage, yes.

57288. You have as good land in Galway as in Wexford?—Not for tillage.

57289. You have not any land for tillage in Galway?—No; it is good for stock-breeding, but really I do not think it would be profitable in tillage. I am talking about mixed farming.

57290. You say the general breaking up of grass lands in the West would seriously injure stock-breeders in both the South and West, as there is a large import of calves from the South into the West, and western graziers often go to the South to make up their lots?—Yes.

57291. But there are very few small farmers in Connaught who buy calves from dealers who bring them from the South?—Yes, a good many of them.

57292. The grazier never buys?—The grazier buys from the small farmers.

57293. You say it would also seriously interfere

* See page 287.

with the horse-breeding industry in Connaught, as all the good horses are raised on the grass lands, and that it is well known to breeders that horses cannot properly be reared on small runs, and the same thing applies to sheep farming. At present, in other words, the farms are so small that the tenant cannot afford to keep a quality horse, as there would be no market for it?—Yes.

57294. Is not the remedy for that to enlarge the holding?—But it would not be big enough.

57295. Do you not think that if you enlarged the holdings to twenty or thirty or forty acres it would enable the tenants to breed a better class of horses?—I do not think so.

57296. You gave as your reason for the present failure of the tenants to breed quality horses the small size of the farms?—Yes, it makes all the difference; but I do not think that thirty or forty acres would be enough.

57297. And that it can only be effectively carried on in this way by the large graziers?—Yes, that is my opinion.

57298. And in regard to your statement about all classes of stock steadily deteriorating, is it not the fact that the Department provide good sires?—Yes, but I am afraid they do not use them.

57299. Is not that a matter of arrangement?—At all events they seem to like an under-bred animal better because they say it is easier to keep in the winter.

57300. You mentioned that you endeavoured to obtain this information with respect to large grazing farms. Is it not the case that this system of conacre and meadowing is less manifest in the farms that have been split up in the second and third years than it is in the first?—I will tell you why. They let the land—I can only speak for two years—for conacre meadowing the first year and they could not get sale for it. I noticed afterwards that they had too much hay.

57301. But at all events when a man is put into a new farm, at the commencement he has not got the capital to go on regularly farming, and he looks about and tries how he will get a little money, and he will let some of the land in conacre and some in meadow, but not with the intention of permanently following that procedure?—But it would take a long time.

57302. But at all events you will admit that there is some indication that, as the years progress, that system, which in your opinion and every one's is very objectionable, grows less?—I can only speak for two years.

57303. My information is that the thing is done in the first instance in order to get a little capital, and that with the capital that he accumulates a more effective method of farming is adopted?—I think the man will not get capital at any time. I do not think he will accumulate capital by that system He may have capital at the start, but he will not make it like that.

57304. You say it seems to be the system of the Estates Commissioners in buying grass lands to endeavour to obtain them at prices that are much below their value to the vendor. I do not wish to be personal, but you must excuse me if I refer to the case of Clooncah. You made an offer for that property and the Estates Commissioners offered a better price?—Yes. I only offered at the time because I thought the thing ought not to be bought by the Estates Commissioners, as there was intimidation.

57305. As far as the case is in any way an illustration, it seems to show that the Estates Commissioners are ready to give a better price than even you?—The reason I went into that case was not to try to get the land, but because there was intimidation. I do not say that the Estates Commissioners paid as much as the place was worth, but I was buying it on the principle of stopping intimidation. That was all.

57306. CHAIRMAN.—How does it stop intimidation? It did not, and unfortunately the Court of Appeal allowed them to make title to the land.

57307. Because it was reduced in value by the intimidation?—Undoubtedly. The rent was reduced to a mere song.

57308. Sir ANTONY MACDONNELL.—So far as you have had personal relations with the Estates Commissioners, is your opinion regarding them favourable or unfavourable?—I have not had dealings with them at all.

57309. Am I right in representing you as likely to have taken this view of the matter if you had succeeded in the purchase, "I have bought grass land very cheap, but that is the owner's fault," or would you have asked the Estates Commissioners to give more than the owner was willing to accept—or am I justified in assuming, from what you say you have read and heard of the Estates Commissioners in your neighbourhood, that they have done fair and honest business, and that they have given the landlord a price which he considered it right and proper for him to accept?—I do not think that they would have got it at that price if there had not been intimidation.

57310. Then as to the intimidation or quarrelling between the landlord and tenant, there was certain intimidation no doubt, and so on. However, they come to an agreement, one side and the other, and then the landlord comes to the Estates Commissioners and says: "I want to sell my land; myself and my tenants have been quarrelling, but we have come to an agreement, and I am anxious to sell my land." Do you not think that that landlord ought to be allowed to sell that land?—He ought to be allowed to sell the land, but I do not think that the tenants should get enlargements of holdings.

57311. Do you not think it would have been unfair to that landlord for the Government to say: "We will not allow you to sell your land, because you have been badly treated by your tenants"?—That is not the idea. What I say is that they should not give grass land to enlarge the holdings of the tenants after the agitation on the estate.

57312. Do you not think it would be extremely hard on the landlord if, having passed through storm and stress and difficulty, and having at last surmounted it so far that he gets from the tenants a price which he thinks would be a fair price to give, and he is anxious to sell, an attempt were made to stop him?—Very, but I only say it is fair that the Government should take care not to countenance intimidation.

57313. You are a landlord's representative. I ask you would it not be unfair to a landlord to prevent him selling at a price that he considers fair, or for the State to say to him that it is a matter for the State, and that they should deal with it afterwards?—My theory of the matter is this that if you allow that intimidation to go on landlords will be compelled to sell at a reduced price.

57314. Now that is another business?—It is the same point.

57315. Take the case of a resolute landlord who says "I won't sell this unless I get a price which I am satisfied with," and that resolution has its effect, and he gets a price from his tenants that he is satisfied with, and that landlord comes to the Estates Commissioners and says to them: "Pass this through," would it not be extremely hard on him if the Estates Commissioners said: "We will not pass it through"?—That is not the case I wished to put.

57316. It is the case I wish to bring before you and put to you. You are the witness of the Landowners' Convention, and I want to obtain it from you, that it would be an extremely unfair thing that that landlord should not be allowed. Is it the position of the Landowners' Convention, that it would be a fair thing to that landlord to prevent him?—I do not say it would be.

57317. I want to bring before you the policy of the Government in contradistinction to the policy of the Landowners' Convention?—I say he should not be forced to sell. I say you should not allow a landlord to be forced to sell. However, we differ.

57318. No, we do not differ. I agree that where you do come to an agreement it would be very unfair upon you not to allow you to sell?—Well, yes, if the agreement was a genuine one.

57319. With regard to the rents of grazing lands, is not it the fact that the rents of grazing lands have been decreasing over a series of years?—Mine have not. My rents are about the same as they were in 1880, except when occasionally a tenant died.

57320. Mr. BRYCE.—That is on the eleven months' system?—The eleven months and the year.

57321. So that you have them let practically from year to year, and the rents can be raised every time?—Every six months.

57322. Sir ANTONY MACDONNELL.—Take the case of land which the landlord farms himself?—Yes.

Sept. 30, 1907.

The Right Hon. Lord Ashtown.

57323. In the case of land that the landlord farms himself, the Estates Commissioners offer, generally speaking, a fair price, judging by the number of transactions that have passed through?—Yes. If the landlord is satisfied, they should not keep the estate from sale.

57324. But a difficulty exists, or objections are raised, in regard to land which the landlord does not farm himself, but which he lets on the eleven months system, say to a shopkeeper—we have been told it goes largely to shopkeepers, and so on?—Yes.

57325. And from it he gets a certain income which the Estates Commissioners hitherto have shown themselves in some instances unwilling to give?—Yes.

57326. We have been told that a great many farmers, over a series of years, have been ruined owing to want of profits and want of success?—Yes.

57327. And we have been also told that a number of these are shopkeepers, who, failing to make a profit on grazing, still hold on in the hope of better times to come, and pay the rent from the profits of the shop. Do you agree with that?—No; that is not my experience at all. In fact, shopkeepers are fond of other investments. And it may be that there are extreme hopes among grazier men, as among others; but for failure to make profits you must go back to 1879. Then, undoubtedly, there were a lot of graziers who failed. Then there was pleuro-pneumonia and there was foot and mouth disease, that took a lot of the profits away. I don't think that since 1879 there is a decrease in rents. I should say, in fact, that they have improved.

57328. It is a matter which is susceptible of statistical verification whether or not the rents of grazing lands have been decreasing. We have evidence that they have been decreasing; but if rents of grazing lands have been decreasing, and if it be also the fact that many people have been ruined owing to these high competitive rents, would it be a fair thing to have a purchase price upon grazing rents?—I think it would be perfectly fair for the Commissioners to look back and see how long the land has been let, and see whether the price asked by the landlord was exorbitant or not.

57329. Where you have grazing lands in the landlord's hands, or grazing lands in the hands of present tenants, in regard to which rent has been fixed, the rent of the grass land has decreased *pari passu* when the land is tenanted land?—Certainly that is not my experience. I can only speak from personal experience, and it is not the fact.

57330. But rents have fallen?—First term rents have fallen, but grass land rents have not fallen.

57331. I am drawing a distinction between grass lands which are included in farms held by present tenants and grass lands held under a different tenure?—Yes.

57332. Does your Convention enable you to give me information on this point, whether the rents of grazing lands held on the eleven months system have kept up better than the rents of grazing lands let to future tenants?—Oh, certainly.

57333. They have kept up better?—Yes, they have kept up better.

57334. Is not that an argument why they should not be made the basis of a calculation for the future?—I do not think so, but an argument that judicial rents are too low.

37335. There are three sorts of grazing lands—lands which are held in present tenancy, lands which are held in future tenancy, and lands which are held on the eleven months system?—Yes.

57336. There has been, you say, a reduction in the rents of the two former, but not in the latter, and then I suggest to you that the maintenance of the higher rent in regard to the eleven months system is a reason why the eleven months system rent is an unsuitable and unfair basis, for it is not the eleven months rents, or the year to year rents, but it is all the rents, that give a fair basis?—But I do not think it is, because the only way you can get a fair price for land is by open competition. You cannot get it from improvident tenantry, but open competition is the basis of value.

57337. Sir John Colomb.—You stated in starting that you were going to hand in some particulars of expenditure and the nature of your farming operations?—Yes; I should like to give it in my evidence. I should like to show the improvements on the estate.

57338. My question was limited to asking you to hand it in. I leave it to your discretion?—I should like to give the expenditure on labour. The expenditure on labour in respect of lands in hand in 1900 was £2,563 9*s.* 11*d.*; in 1901, £2,664 7*s.* 11*d.*; in 1902, £2,272 6*s.* 8*d.*; in 1903, £2,890 0*s.* 8*d.*; in 1904, £3,034 1*s.* 0*d.*; in 1905, £3,130 17*s.* 0*d.*; in 1906, £3,002 15*s.* 10*d.*

57339. Chairman.—What is this for?—I want to show it, my lord, as evidence of economic holdings. I want to show that with the labour all these uneconomic holdings on my property would be truly called economic.

57340. In order to do that you should give us the history of each of those holdings?—I can do that here if you like.

57341. I understand that your point is that you employ a good deal of labour?—Yes.

57342. I do not know that anybody has controverted that?—But I do not consider a small holding uneconomic when it has labour.

57343. Mr. Sutherland.—Tell us the rent you get from the estate?—The rent I get is £2,130 15*s.* 0*d.*

57344. And the average of this other expenditure?—Counting the amount I spent on the place last year, it came to £3,732 10*s.* 0*d.*

57345. So you are carrying it on at a dead loss?—No, certainly not, because that is labour; only receipts must be put against it.

57346. You say the rent is £2,130, and the expenditure £3,732?—That is the labour.

57347. Sir John Colomb.—You laid down as a general proposition that any charge in the nature of transfer and striping and dividing up of land should be gradual?—Very gradual.

57348. Then you go on to classify, under four heads, different classes of grazing land?—Yes.

57349. Am I right in putting this interpretation on your evidence, that the authority charged with the acquirement of grass land, for the purpose of settling farmers on it for mixed farming, must eliminate practically two out of the four?—Yes.

57350. First, the heavy land; secondly, the light land, with limestone rock, and that it is the fourth, which is chiefly land in the West Riding, that would be improved by tillage; and that that should be the first land to be used in carrying out a policy of the nature I have described, and the first land to be taken for beginning the experiment?—Yes.

57351. And if that were successful you would only have remaining, in your view, No. 3, which could be tilled, but which is more profitable in pasture?—By that I mean that parts of those grass farms in No. 3 could be tilled.

57352. There are two things: first, that the work should be done gradually, and, secondly, that the lands should be acquired in the order specified for small holdings and mixed farming?—Yes.

57353. And you look at the uneconomic holdings as likely to furnish labour?—An uneconomic holding gives labour. I know that at the present time, and Mr. Daly told me that since uneconomic holdings were done away with, he found it very hard to get labour, and he had to lay down all his land in grass.

57354. But where you have uneconomic holdings and no demand for labour, you are met with a difficulty and migration is the only remedy?—Yes.

57355. Mr. O'Kelly.—The tenants have to do for themselves in that state?—They have too much to do for themselves to want labour.

57356. Sir John Colomb.—You were asked about the land in Wexford by Sir Antony MacDonnell. Is not it the case that the Wexford land is land which requires constant cultivation in order to get anything from it?—It is absolutely necessary. It is certainly different land from this.

57357. And do you give it as a general proposition that any places in Ireland which require constant cultivation in order to get a living off them are generally in districts where the land is poor?—The land is what you call light tillage land. It is not grass.

57358. It can be kept in grass?—It is not grass land.

57359. Now, you spoke of the grazier buying from the farmer?—Yes.

57360. When you use the word "small farmer" you are speaking of this district?—Yes.

57361. And I have in my mind other parts of Ireland, for instance, Kerry and Cork, and therefore I would ask you to intimate what you would call a small farmer in this country—about ten acres, or

twelve or fifteen?—It is whether he keeps two cows or one.

57362. Am I right in putting this construction on the process you describe, that the small farmer here buys from the small farmer elsewhere?—The small farmer here buys from the small farmers that come up from the south.

57363. And the process is this: The very small farmer produces something?—Yes.

57364. And the bigger farmer buys that?—Not quite. The bigger class of small farmer buys from the smaller to fill up with; but he also buys calves brought from the South, and he passes them on to the grazier.

57365. What you mean is that what the bigger farmer buys from the smaller farmer is used to fill up his stock?—Yes.

57366. Do I understand that the smaller farmers here that you describe are the original buyers as it were of the stock from the districts where the holdings are very small, such as Kerry?—Sometimes the graziers buy.

57367. You have referred to the desirability of obtaining information as to the actual facts of the working of farms?—Yes.

57368. And you say that that information used to be furnished, but that the practice is discouraged now?—The police used to furnish that return every six months. They do not do it now.

57369. You mean special returns concerning the holdings of tenant purchasers?—Yes.

57370. Were they published?—No; I do not think they were ever published, but they were sent in.

57371. You also referred to effects on the price of hay?—I said they stopped meadowing because the price of hay was low.

57372. But do you not consider that the hay should not be sold off the farm?—Yes, but I am afraid it is always done round here.

57373. It is wrong by all the canons of successful agriculture?—Absolutely wrong.

57374. We have had it in evidence that graziers are being ruined by the rents they are willing to give in competition for grazing land, and I see you have stated, and we have had it elsewhere in evidence, that an annuitant lets his land for grazing at a higher rent than the graziers paid?—He lets to graziers who I know for a fact where it has been done are renting some of the land back at a very much higher price, I may say nearly double.

57375. Then I should like you to develop that, because it appears to me strange. If the graziers are being ruined by paying too much to the landlords, I cannot understand how a grazier takes land from an annuitant and pays a great deal more. Would you kindly develop it?—I can only say this, that I think one reason of it may be that the grazier does not know what to do with his capital. He has to sell his stock, and he must put his money somewhere, and that undoubtedly may have something to do with it.

57376. Do you mean this, that the man with stock is eliminated, as it were, by the process. He has to find grazing somewhere, and he takes it in small patches from small holders instead of in big land?—Yes, he has to do it.

57377. Unless he gives up business entirely and starts a new line of life?—Yes.

57378. Then you point out how important it is that a man entering into a new holding should have an amount of capital to put into that new holding?—Absolutely necessary.

57379. And therefore your view is that in carrying out a State policy of this sort, it is not merely a question of providing the houses and the fences and the outhouses, but it is a question of giving the man the plant necessary to start him in farming?—They certainly have not got it.

57380. And therefore you advocate that wherever this is being done some means should be devised by the State to give that man the necessary capital in order to give him simply a fair start?—Yes, that is it. He could not start otherwise. I should like to add that they ought to be particular as to the man they choose.

57381. You say it would be far better to encourage capital to come into the country by every possible channel?—Yes.

57382. Well, of course, you are aware that that was the foundation principle of the Incumbered Estates Act?—Yes

57383. Now, as that Act has produced the consequence largely of involving the whole country in the present state of difficulty, in what way can you suggest to the Commissioners that capital should be encouraged to come in for the purpose you consider so desirable, and that we all admit to be desirable?—I think the land could be made much more profitable if there was no fear, like there is now, of intimidation and putting people out, and future compulsory legislation. In view of all these things, no one is secure in anything he has got here or will put any money in it. They do not know what is coming next.

57384. You are looking at it from the point of view of the large occupier of land?—Not only of the large occupier of land, but in every sense, industry and every sort of thing. I venture to say that the landlords who will sell their properties will not invest their money in the country at all.

57385. I thought you rather meant giving facilities to tenants and occupiers to put capital into the land?—I do not think the big tenants are at all happy under present circumstances. They do not know how much land they are going to be left.

57386. I am asking you on this basis, that it is too late in the day now to reverse the Land Laws, and you have got to face things as they are?—Yes.

57387. You have got to face and accept the condition that the policy now most favoured is the breaking up the grass lands, that this is now the State policy?—Yes.

57388. And it was in regard to that that I wanted to ask you have you got any suggestion to make as to how capital is to be attracted through the tenants to be put into the land?—I do not think there would be any way of doing it.

57389. You spoke about inducements for landlords to remain in the country after they had sold?—Yes.

57390. And you point out that the only two things really in this country to carry out and effect that purpose are the interest of farming land and the interest in sport?—Yes.

57391. And the two things go together more or less. And then I may take it from you that looking generally at the whole question, you see the importance of the question of game and fishing from the point of view not particularly of any individual class interest but as an element of the national wealth?—Certainly.

57392. And therefore in carrying out a big policy like this, do you not think that, not from the point of view of any individual or body, but as an element of the wealth of the country, that is a matter that has to be borne in mind and taken care of?—It must be.

57393. Now, I understood you to say, in reply to Sir Antony MacDonnell, with regard to cases where the question of intimidation was introduced, that the main danger you felt was as to the value of the land being whittled down by the fact of transactions not being free?—That is it exactly.

57394. You will correct me if I am wrong. What you meant was not that the Estates Commissioners should reduce or increase their price, but that if a landlord was willing to sell his property at its fair value the Estates Commissioners should pay it, and it was a question then as to the determination of the prices the tenants should pay. That is your attitude?—Yes.

57395. From the answer you gave to Sir Antony MacDonnell, the inference I drew was this, that abnormal circumstances, due to agitation, could not alter the inherent value of the land?—No; that is right; it could not.

57396. And therefore what you meant to convey to Sir Antony MacDonnell and the Commissioners was this, that that particular circumstance should not prevent the landlord getting the fair value, and that what you meant was that the Estates Commissioners should still give the fair value of the land if the landlord wished to sell it, and then it would become a question of State policy as far as redistribution?—I say that if a landlord wants to sell, the Estates Commissioners should give the fair price and not a price produced by agitation.

57397. Sir ANTONY MACDONNELL.—But have you ever yet known the Estates Commissioners to take advantage of a reduction caused by intimidation?—In all those estates they have given a very low price.

57398. I do not want to press you, but I put my question again. Have you ever known a single instance in which the Estates Commissioners have offered a price which reasonably created a suspicion that that price was fixed having regard to intimidation?—I do not want to go into that, but where there

Sept. 30, 1907.

The Right Hon. Lord Ashtown.

has been agitation the Estates Commissioners are apparently under the impression that the landlord has to sell, and they do not give, and have not given, as good a price as anywhere else. I do not think that they would have got certain lands at the price they have, if there had not been intimidation.

57399. They have not given the price?—No; I do not think that they have.

57400. Sir JOHN COLOMB.—If you are going to buy untenanted land on the basis of net income ascertained over an average of previous years, then obviously if the letting value of the land had been adversely affected by agitation, that would effect receipts in some of the years?—Certainly, and they ought not to be taken into consideration at all. If there has been intimidation those years ought not to be considered.

57401. I want to ask you this about the feasibility of fixing the price to be paid for untenanted land. Where there have been regular transactions in a series of yearly grazing lettings there is not much difficulty about net income; but now let me take untenanted land outside the demesne?—Yes.

57402. Worked as an integral part of the holding of the landlord, the landlord's operations embracing the demesne; in that case do you or do you not see a very great difficulty in anybody arriving at really what was the relative value of that particular portion of untenanted land?—You could not possibly do it, because there is a lot of work that the landlord has done which may take several years to give a return—a lot of buildings, etc.

57403. You would agree that it is a matter of impossibility where there are two or three farms worked together in one scheme to apportion to each the profits made, for books could not possibly show it?—You cannot possibly do it.

57404. Another thing that cannot be possibly judged by an outsider is, if I take so much for meadowing how will it affect the rent?—Yes.

57405. And then you say you consider it is unnecessary that every farm should be valued at £10 or £12, or any other fixed valuation, to rank it as an economic holding. By fixed valuation you mean Griffith's valuation?—Yes.

57406. Do you think that a valuation made sixty years ago has relation to the inherent value of the land now?—None at all now. The valuation in the West Riding is very much higher than in portions of the East.

57407. And therefore may I interpret you as saying that a scheme for the relief of uneconomic holdings, based on the question of Griffith's valuation, is on a false basis?—I think it is all false.

57408. And therefore that in dealing with the question of economic holdings, it is not merely valuation, but a variety of other circumstances have to be taken into consideration?—Yes.

57409. Now, you say that every possible encouragement should be given to residents, both owners and tenants, to employ labour?—Yes.

57410. Now, can you give us any clue to what is in your mind in the case of tenants, because it is really annuitants you mean by that?—What I meant there was big tenants, not these annuitants, but the big tenants who have not already bought their holdings.

57411. Can you give the Commission a suggestion of how you would set about that?—The first thing is that you want to give the tenant the idea that he is a fixture there and will not be disturbed by legislation. There is a great feeling among big tenants that they may be cut out and find their land and house taken up again.

57412. I understand you to think that the big tenants you refer to are deterred from giving a considerable employment of labour or even making improvements by the fear of changes?—In legislation, certainly.

57413. Just as small tenants before the Act of 1881 were afraid of doing anything for fear of confiscation?—That is it; and I think there is no doubt about it that if the landlords could be sure that this was a final thing a great amount of money would be put into the land.

57414. Mr. BRYCE.—You divide the land in Galway into four classes. May I ask you what is the distinction of boundary between the East and West Riding of the county?—That is a police definition.

57415. But roughly speaking?—Well, if you went down by Athenry, west of Tuam, and round that way.

57416. And generally speaking the land to the east of a line through Tuam and Athenry, and so on, is good for tillage?—Part of it is. But there is a line of country which may be called bog country where the land is much too heavy.

57417. In passing yesterday I saw a great variety of magnificent crops of oats on land that had been reclaimed from bog?—I think there is not half enough value put on reclaimed bog. Where you have deep, retentive soil in the neighbourhood of bog you could never make good tillage land of it. It is too rich. I tilled a lot of it myself.

57418. The oats would grow up and then lie down, because they would be too strong?—Yes. I grow my oats on bogs for ensilage. The most valuable thing I know is cut-away bog.

57419. That being your view of the district, how much would you say exactly there is in three and four?—I could not tell you.

57420. In fact, according to you, there is very little land in the county available for mixed farming?—Oh, no; there is more land available for mixed farming in the West than in the East.

57421. You think there is more land fit for mixed farming, on the whole, in the West than in the East?—Especially in the West.

57422. You say it would be far better to encourage capital to come into the country by every possible channel instead of legislating to try and give effect to mere popular theories?—Yes.

57423. You say that the landlords at present are being frightened away from the country?—They are.

57424. And that if the land is distributed among the tenants no improvements or no industries will be started?—When the capital leaves the country that will be the end of it.

57425. Was there so very much capital in the landlord class, for we have always understood, and we have been told, that estates in Ireland have been very largely mortgaged?—I know that, but what I mean to say is this, that supposing they sell all their land, as matters are going on now, the money they invest will leave the country. It will not be invested here.

57426. But in former days when there was not this legislation of which you complain, in the days before the bad times, before 1880, say, up towards 1879, there was no obstacle to the landlords investing their capital in the land. Did they do so?—Certainly, but there is no object in investing capital in land now.

57427. You see you are foretelling a certain amount of disaster in case the capital leaves the country, but capital was in the country before there was any of this obnoxious legislation. What you regard as obnoxious legislation began with the Land Act of 1881. Was there any very large investment of capital by the landlord class in improvements either in agriculture or industry?—On some estates undoubtedly.

57428. But generally. Here is the simple case. Money was not being spent properly, and was not the capital that was invested in the land in reclaiming it and putting it into the shape in which it is here—was not all that put in by the tenants?—I don't know about Connemara.

57429. But has not the whole of the land of the West of Ireland been reclaimed by the tenants?—Oh, no, certainly not. What do you call the West of Ireland?

57430. Are not all the buildings put up by them?—No; I am building.

57431. You are talking of the whole country. I am talking of the congested districts of Ireland generally. We are inquiring into the wretched parts of Ireland?—I am talking about large parts of Ireland that you want to take in.

57432. You came to give evidence on behalf of the Landlords' Convention to the Commission, which is inquiring into the question of poverty and wretchedness?—I wish to appear for a great many of those landlords, and I say that when they sell, too, they will not invest in the country.

57433. Your point is that a large part of Ireland will be impoverished by the improvement in the position of the poor tenants in the West?—I do. I think so, undoubtedly. I think so.

57434. Then, in view of the maxim of the greater happiness of the greater number, do you not think it would be well to improve the condition of the poor tenants in the West even if a richer district in the centre suffers?—You should not improve the thriftless at the expense of the thrifty.

57435. That is introducing another question, that is introducing the question whether they are thriftless or not. It is claimed, and apparently with some show of justice, that it is not thriftlessness but want of opportunity that keeps them in their present position?—I do not know that there is any want of opportunity at all.

57436. With regard to that question of want of opportunity it may be a disputed point, but I think there has been a good deal of evidence that the people want opportunity?—Only if they stay where they are.

57437. If they stay where they are! Would you like them to go, too?—To go and get employment elsewhere.

57438. To go out of Ireland altogether?—Why stick down there?

57439. There is plenty of evidence to show that they do go away. They go to get labour. There are large numbers that go from this county and Mayo to Scotland and England to get work?—They do not stay there. They come back. If a man cannot live in a position in his own country he can get labour elsewhere, and there are lots of people that can get it.

57440. But the whole object of this Commission is to try to get a remedy for that state of affairs. Now, it appears to me that the drift of your evidence is to show that the present state of affairs is good in so far as it sends these people out of the country to get labour elsewhere. Would you look to see that state of affairs continue, with people on the verge of starvation, or would you like to see it stopped?—I do not say it is good at all, but I say you need not feel on the verge of starvation if you can go and get labour elsewhere.

57441. In the old country suppose they cannot get work?—But they could get work elsewhere. Hundreds of them go to the harvest and come back again.

57442. Do you think it is an economic condition of the country when it requires two millions of pounds sterling to come into the country to help to maintain the people?—Who puts it in—this Government.

57443. I do not mind, but somebody or other contributes over two millions per annum from outside to maintain the people?—How is it contributed?

57444. In the form of earnings of migratory labourers in England and Scotland?—But then it is their earnings.

57445. There is something like two millions that comes in gifts from relations in America to relieve the misery of the suffering people in this country?—I know, but those are men that had small holdings, and they have done like other small holders we know of; they have gone somewhere else to get labour. I think it is a pity that the labouring man who goes to get work does not stay where he gets work.

57446. I see. In fact, I may take it that you want to keep the whole country in grass?—I certainly say that with a mixed holding, I would sooner see it in the hands of a big tenant giving labour than in the hands of a small tenant proprietor. It would give more labour.

57447. Now, you say that the Estates Commissioners have given low prices, and that the low prices which the Estates Commissioners have given for grass land are owing to the fact that there has been intimidation?—I say that they would not have got the grass lands at the prices they have if there had not been intimidation.

57448. And it was not owing to the fact that the rents of grass lands had fallen?—But the rents have not fallen.

57449. Do you not think that the argument is rather inconsistent?—What?

57450. That your rents have not fallen, although I presume that you have been intimidated as much as anybody else?—Yes, but I have not sold. I would not take the price at their valuation of it.

57451. And if it is to be supposed that there is intimidation anywhere it is where you are?—That is right; but I can hold my own. Some landlords won't. Lots would clear out.

57452. But I am only pointing out that you are getting no lower price for your land?—I am not selling. I will not take any price.

57453. Your tenants have not been intimidated?—No.

57454. Suppose you said to them: "We want you to throw up the land," according to your experience, they would give the same price for their yearly takes?—They will not give the same price where a grazing tenant has been intimidated. There is a case in point where the rent was cut from £140 to £40 through intimidation.

57455. I cannot help thinking that the fact that your tenants have not been intimidated shows that intimidation has not been so really rampant?—Round me; not on my estate. You have only to go to the Athenry grass farms and the Dunsandle Estate, which has been sold.

57456. Now, the only other point I should like to mention to you is that you seem to say that every uneconomic holding should be called economic if the tenant and his family have other sufficient means of living, derived from such sources as local employment, migratory labour, or jobbing in small stock. That is an attempt to introduce, I take it, a different definition of "economic"?—I say I don't agree with the present definition of "economic."

57457. Would you say that a holding is economic if it consists of ten acres on a block of granite?—If the man could get labour besides from that block of granite I would say it was all right. You must take into consideration what he gets, besides what he gets off the holding.

57458. It is introducing a new definition of the term "economic"?—I don't agree with the present definition at all.

57459. Mr. KAVANAGH.—On the question of grass farms, you stated to Sir John Colomb that you would accept the net income. Supposing these grass lands have to be acquired, would you accept the net income as the basis of purchase?—Yes, plus the landlord's good will.

57460. That is not what I call the net income?—It should be based on net income; but at the same time there should be the landlord's good will. The landlord has as much good will in the land he has as the tenant has in his.

57461. Sir ANTONY MCDONNELL.—Does not grazing land cover all that?—No.

57462. Mr. KAVANAGH.—What does the grazing land cover?—The grass that grows on it.

57463. Does not the price include the good will?—No.

57464. Would not that cover it?—No; because if the landlord were to put the letting of the land up to auction he would probably get seven or eight years' purchase.

57465. Sir ANTONY MCDONNELL.—You would not estimate grazing land at competition value?—Of course I would.

57466. Mr. SUTHERLAND.—Supposing that competition were to cease?—How is it going to cease—there is plenty of competition for land.

57467. Mr. KAVANAGH.—Do I take it that you do not accept the net income as the basis of the price of grass land?—The net income of grazing land, not as the full price; no, certainly not.

57468. You are aware that your Convention has already accepted it?—I cannot help that. I do not think they have, as a matter of fact, with regard to grazing land.

57469. CHAIRMAN.—You are in a difficulty once you begin to talk about price on the basis of net income?—You are putting it to me on the basis of net income.

57470. Sir ANTONY MCDONNELL.—Would you not say that thirty-five years' purchase is an enormous price for land in that case?—I think grazing land is worth more than that.

57471. Grazing land is bought now by the Estates Commissioners at twenty-seven or twenty-eight years' purchase?—Yes.

57472. And you would add to that a number of years' purchase for your good will?—Yes.

57473. You get nine or ten years for a small holding?—It depends on the size of the ground. You get far more for small bits of land than you do for big ones.

57474. Then you get the normal price of land up to considerably over thirty years?—I would say that if the State choose to do it, they must give the landlord the price.

Sir ANTONY MACDONNELL.—That is an absurd doctrine.

57475. Mr. KAVANAGH.—Now, with reference to grazing lands where the landlord is the grazier?—Yes.

57476. Suppose he grazes these lands himself. In reply to Sir John Colomb you stated that it was difficult in that case to arrive at the net income?—Not if he grazes the lot of them.

57477. But if he uses one or the other, it would be difficult then to arrive at the net income?—Yes.

Sept. 30, 1907.

The Right Hon. Lord Ashtown.

57478. Have you any other suggestion to make about arriving at it from his books?—I don't see how you could. You must always take into consideration in grazing lands what effect the taking away of one would have on the other.

57479. Then you are driven from that, and you have to go to some other basis?—I could not give you any opinion unless I was selling land myself, and then I would.

57480. Would you take Mr. Boyd's definition?—No; I do not think the present valuation is right either.

57481. Mr. O'Kelly.—You would not wish to see anybody buy a property the income of which was, as Sir John Colomb has put it, whittled down by what you call rampant agitation?—No.

57482. It should not be touched?—I do not say it should not be touched; but I say the agitation should not reduce the price at which it ought to be sold.

57483. Was there any agitation on the Clooncah property?—Yes.

57484. And is it right to say that in consequence of that agitation the price was whittled down?—It was, most certainly.

57485. And for this property—the Clooncah property—you proceeded to offer a price?—I did.

57486. Do you complain that the Estates Commissioners have been giving lower prices for certain estates on account of agitation?—Yes.

57487. As a matter of fact, would you not have got this property at a considerably lower price than the Estates Commissioners paid for it afterwards if the landlord accepted your offer?—Certainly, I should.

57488. So, therefore, if your price had been accepted, you yourself would have reaped a benefit from the agitation that was proceeding?—That is not the way I looked at it.

57489. Is not that the way to look at it?—The way I look at it is this. I went in to buy the land, to see if the land could be bought; and if I had bought the tenants would not have gained their ends by intimidation.

57490. If you had bought?—Yes.

57491. But you would have bought it at a lower price?—Exactly; but I could have put a spoke in the wheel of agitation.

57492. At the same time the fact remains that you would not have extinguished the agitation on the property, because you would have got that property at a price which would not represent its fair value?—Undoubtedly. I don't deny that; but that is not the point. The object I tried to buy that property for was to prevent tenants getting the land where there was intimidation.

57493. And incidentally to secure the property for yourself at a price lower than its value?—That was a minor thing.

57494. Mr. Sutherland.—So that you would have made a profit on the effect of intimidation on the price of land?—Yes.

57495. Sir Antony MacDonnell.—From what you say of the manner at which you would arrive at the selling price, there is not much likelihood that the Commissioners would be able to abolish large farms?—There is not.

57496. Is not that merely strengthening the case for the necessity of compulsion?—They are lands for which there should be a great deal more paid, even at present.

57497. Mr. Sutherland.—You made a statement in reply to Sir Antony MacDonnell that the price of land is too low at the present time for the seller?—I say it is.

57498. And has the selling price of the land been going down lately?—Well, it is being sold too quickly.

57499. Is the price downward just now or upward?—Well, I cannot tell you that just now.

57500. Would you say it is going down?—I do not think it is.

57501. It is going up?—I think it remains steady.

57502. You know the price at which land was sold under the Ashbourne Act in Ireland?—It was sold by heavily mortgaged landlords.

57503. And the price paid now is considerably higher than that price?—I dare say it is.

57504. And it is still going up since the passing of the Act of 1903, is not it?—Oh, yes; it is going up since the Ashbourne Act.

57505. So that you cannot complain that the price of land is affected by intimidation when it comes to be sold?—I did not say it was depreciated.

57506. I see that you made a complaint to the Commission that the landlords were not getting enough, and that the price of land was being depreciated by the agitation?—I say the land is sold at a price it would not be sold at if the country was right and in order and peaceful.

57507. And then it would be sold at a still higher price?—Yes.

57508. So that concurrently with intimidation the price of land has gone up, and intimidation does not affect the price?—It does, certainly. You are comparing the 1903 Act with the Ashbourne Act.

57508A. What becomes of the general proposition that intimidation puts down the price of land?—It has put it down.

57509. And then you say that with the existing intimidation the price of land is going up. How do you reconcile these things?—The price of land would be higher if there had not been intimidation. I say the landlords would never have taken the prices they have if there had not been intimidation.

57510. So that the more intimidation the higher the price will go?—No; I say if there had not been intimidation the price would have gone higher.

57511. Chairman.—Now, with reference to your point about labour, I take it that in your view the change from uneconomic to an economic holding would diminish the labour supply?—I am certain of it. I know it has done so.

57512. Now, take your own case. On what work do you employ the labourers?—Farm labour, improvements, fencing draining.

57513. Then can you divide that into two heads—labour which you employ in connection with your home farms, and labour which you employ in connection with the grass land which you have in your possession?—Yes; it is all worked together. You know that with breeding stock there must be a lot of labour.

57514. But is not it fair to divide roughly into those two heads the labour which you employ about your place?—I employ labour on the home farm. There is a lot of labour employed in connection with the demesne, a lot of labour employed outside.

57515. There is labour which is employed in connection with your farming operations?—Yes.

57516. And there is the labour which you employ in connection with your demesne inside?—Oh, no; that is not included.

57517. You omit that?—That comes to about £954 more.

57518. Is the labour which you have at all or entirely connected with your agricultural operations?—Fencing and draining of the land, and building and farm labour.

57519. If you break up the grass land for instance, which is in your possession, and give it to a number of men, though there may be less demand for outside labour, employment still will go on as there must be a certain number of people who are living by that land?—I do not think that a man with an economic holding will make so much a year as they would make.

57520. You do not think that a man getting a good holding will earn as much off that land as he would by occupying the small holding and labouring outside?—That depends on how big the holding was.

57521. An economic holding of thirty acres?—I do not think he would. He would not clear £2 an acre on it.

57522. Whether he did or not he would be more contented, for labour is a precarious kind of thing?—No; my wages are practically fortnightly. They are certain of their wages unless they are sick.

57523. Are you certain that circumstance will always remain the same—suppose you were to go out for example?—If I were to go out my farming operations would probably still remain.

57524. Supposing you did not take an interest in farming operations, the whole of the labourers might be discharged?—They would, but they might get economic holdings out of my land.

57525. If that could happen would not the man's future be more safe and more certain by having a holding on which he could prosper comparatively as a farmer than when he is perhaps depending on the whim or taste of the man who lives there?—That is

quite true, but if that came it would be time enough to think about it. At present I give plenty of labour.

57526. But you have a right to think of it because it is a matter which affects practically the prosperity of the district?—I do not believe that the dividing of grass land will make prosperity.

57527. Supposing for a moment that the creation of economic holdings does have an effect on the labour supply this man will have sons, and if there is a demand for labour in the district these will be available, while one of these sons will take to an economic holding that will perhaps be planted?—As a matter of fact I find that the sons of my tenants work for a certain time and then go to America.

57528. Because there is not sufficient to keep them at home?—I find that after three or four years those I employ go to America.

57529. Because the wages they get there are better than what you give them?—No; I do not think that, but because there is no opportunity to save money in this country.

57530. Does not it depend on what they can earn?—In this country, hardly.

57531. But is not the migration of agricultural labourers from Mayo and Western Galway due to the fact that in England they can earn better wages than they get at home?—They would not get any demand at home.

57532. And they go to America for the same reason?—I think they feel more independent.

Mr. JOHN CUNNINGHAM examined.

57533. CHAIRMAN.—You are Chairman of the Mount Bellew Board of Guardians?—Yes. I have here statistics of the Union, and from the statistics I find there are 2,759 landholders under £5 valuation in Mount Bellew Union. 300 of these are in the scheduled electoral division of Clonkeen. There is only one electoral division in the Union scheduled, although each electoral division has congested townlands. In the non-scheduled districts there are 2,479 holdings under £5 valuation, and there are 33,600 acres of land available for distribution, that is if the owners are inclined to give it. In a few of these cases there are sales arranged, but it is not divided. The population is very much reduced too. In 1871 it was 18,423, and in 1901 it was reduced by 3,400. The system of scheduling is very misleading, inasmuch as the most congested townlands in the Union are not scheduled as being congested owing to their being large grazing farms which overbalance them, and that is the reason they are not scheduled, and it is a very misleading thing; as an instance of this in Derrysessann electoral division one grazier with 893 acres and all the other holdings in the property are uneconomic. This gives an idea of this system and of the tenants on that estate. Nearly all of them have uneconomic holdings, thirteen of them have only four acres with an average valuation of £1 15*s.* 0*d.* It shows how hard it is for these poor people to live. Yet they were not scheduled owing to the large grazing tracts beside them. Again, in Mount Hazel electoral division one landowner, Mr. Joyce, owns 795 acres of land to himself, and he has about forty tenants whose holdings average about seven statute acres, and the average valuation of all his tenants is only about £2 9*s.* 0*d.*, yet he declines to sell. In Gunnade and Curraduff in Ballinakill Electoral Division there are thirty tenants with an average valuation of £3 10*s.* 0*d.*, and the estate was sold twelve years ago here in Ballinasloe. It was sold by order of the trustees of the estate, and the tenants holdings were so small and miserable that the agent considered that the Land Commission would not advance money on holdings so hopelessly scattered, and therefore he offered it for sale and it was bought by Mr. M'Donnell, of Tuam, at something about twelve years' purchase. Some years ago the tenants approached him with a view to sale, and he would sell at twenty years' purchase and no less. However, when the Land Act of 1903 was passed, which gave him a bonus, they asked him again, but instead of the bonus bridging over the difficulty between them, it seemed to make the land more valuable in the eyes of the landlord, as he asked twenty-two years, and refused to give them a grazing farm he holds near them, so they are still living in these miserable patches. Before 1903 the Congested Districts Board bought two estates in our Union, in fact in the parish in which I live, and they bought them at fourteen and a half years' purchase. Since the passing of the Act they purchased three estates at twenty-eight and one-third years' purchase on the average, taking the Poor Law Valuation, which shows, I think, the great increase there is in land since the passing of the Act.

57534. Sir ANTONY MACDONNELL.—What was the other estate bought for, before 1903?—One of the estates purchased by the Board was the French estate called St. Brendan's. That was purchased at fourteen and a half years' purchase in 1895.

57535. Were any rents fixed on that?—The Congested Districts Board divided it at that time. That was the first estate which they worked, and the most successful thing they did.

57536. But before the Congested Districts Board bought had the tenants had judicial rents fixed?—They had, but I am calculating it on the valuation, because I had no means of knowing the judicial rents that were fixed.

57537. On the valuation?—On the Poor Law Valuation I take it as the Government valuation and first term rents were nearly equal in my district.

57538. What was the other estate?—The other was the Netterville estate.

57539. You mentioned that they purchased some estates since the Act of 1903?—The Fallon estate. That estate itself cost 31½ years' purchase on the Poor Law Valuation, but, taking the estates on the average, the price was twenty-eight and one-third years' purchase.

57540. Give me the names of the others?—The M'Donnell estate, one large grazing farm. That was about twenty-eight, and the O'Kelly Estate.

57541. You know the Fallon estate well?—Yes; I live there. I am a tenant on that estate, and I could show you the justice of the basis of the Poor Law Valuation. The Poor Law Valuation was something higher than the first term rents that were fixed.

57542. Your holding has been re-sold to you by the Board and the price fixed?—Yes.

57543. And are you satisfied with the price?—Well, I am better satisfied than some more of them. I think some of them are not satisfied with the high annuity fixed on them, but the holding is fair. I think it is too bad that the tenants have to suffer through the high prices paid by the Board.

57544. But in your own case?—Well, I am paying more per acre than I was paying before, but I got a small increase.

57545. The land has been improved by the Board?—The tenants got more land which gave them a better chance of living. Their condition is better, but the rent is higher per acre than it was before.

57546. Mr. SUTHERLAND.—Has the estate been improved in any way?—Oh, yes, it has, very much. The Congested Districts Board have done a great deal in the way of improvement. They have drained it and have made a little in the way of roads, but the leading road through the estate is not made yet. This land was too dear. But I will not blame them for that. We petitioned them several times to buy, and they made the best bargain they could.

57547. Sir JOHN COLOMB.—The basis you take is the number of years' purchase of the Poor Law Valuation?—Yes.

57548. Do you consider the Poor Law Valuation really represents the present value of the land?—No; in fact I cannot say that, but I know it is about the same all over the Mountbellew district. We might calculate it on the first term rents. It is higher than the first term rents that were fixed on these people.

57549. In some places, but not always. You said that the Congested Districts Board were forced to give too much?—Yes.

57550. That is, too much in your judgment, based upon valuation?—No, not based on valuation, but based on the actual value of the land; and I will give you one reason why I think they did give too much. I do not know on what basis they went, but I know the landlord was getting more for that grazing land

Sept. 30, 1907.
Mr. John Cunningham.

than it was really worth. It was in the centre of a congested district, and these poor people had no means of living but to go to England to work and to leave their wives and children They kept a cow at any rate, and they had not the grass of a cow, and when they wished to put a cow on the landlord's farm he would charge his own price, and they should pay a great deal too much. The landlord sold meadow to the country around, and he was making more out of the land than it was really worth; now I consider that when land is bought in a congested area like that it is a very misleading thing to go on what the man makes of it, because he makes more of it than it is worth.

57551. Sir ANTONY MACDONNELL.—What is the size of your farm?—Eighteen statute acres.

57552. Have you a shop?—I have a shop.

57553. Sir JOHN COLOMB.—Have you a licence?—No; it is a small country shop.

57554. You give the population in 1871 as 18,423, and you say that, compared with 1901, it has decreased by 3,404. Now, can you tell me what the poor rate was for 1871?—No, I cannot.

57555. Has it fallen very much?—I know it is higher in the district now than it was ten years ago; and I believe the land will be taxed higher, and must be. But there is one thing with regard to the French estate, that was the first estate the Board bought. They are very comfortable, and the land question is surely settled there. Not that they got much land, but they got it on reasonable terms, and they are prosperous.

57556. Mr. SUTHERLAND.—That was bought at fourteen and a half years' purchase?—At fourteen and a half years' purchase.

57557. CHAIRMAN.—Have you finished?—Well, I think so. I have nothing to say except about the Board. The Estates Commissioners did very little in our place; it was done by the Congested Districts Board; and I think the Estates Commissioners are shy about buying in these quarters, because they have to pay more for land in congested areas than elsewhere; and as far as we are concerned in our district, I think the Congested Districts Board is much a better body to deal with congested areas. They have more experience and they go to a great deal of trouble in draining and doing things that the Estates Commissioners would not be likely to do; and then they lend money to some people who are poor to enable them to stock their land, on reasonable terms. And provided they get the land cheap enough, and without compulsory powers I do not think they can, we consider them the best body for congested areas.

57558. Mr. SUTHERLAND.—Do you mean for buying or distribution?—For distribution.

57559. And what about purchasing?—I think they should get it as cheap as the others.

Mr. JOHN F. WARD examined.

Mr. John F. Ward.

57560. CHAIRMAN.—You are a member of the County Council, are you not?—I am a member of another body, but I have been appointed here to give evidence before the Commission by the Galway County Council.

57561. Sir ANTONY MACDONNELL.—You are not a member of the County Council?—No, sir; I am a member of the Poor Law Board of Guardians and of the Urban District Council. I am not a member of the Galway County Council.

57562. CHAIRMAN.—Where do you live?—Ballinasloe.

57563. You have got a business here?—No.

57564. What are you?—I have been trustee over an estate belonging to my late father. The estate lies in the two counties. In the County of Roscommon there are about ten acres of land held by agricultural tenants, and I have been a trustee over that for the last eight years. I am an annuitant under the State also beneficially.

57565. Mr. SUTHERLAND.—So that you are practically representing the interest of the landlords?—No, sir; I severed my interest with the landlords long ago. I have been thinking for myself. I consider that this Union of Ballinasloe will be most important and interesting to your Commission on account of the extensive clearances that have been carried out by two Scotchmen who came over some forty or fifty years ago.

57565A. What are the names?—Pollock and Mathers. There are vast tracts of untenanted lands of prime quality on the Roscommon and Galway sides of this town, and I would venture to say that if they were sliced so as to satisfy all the needs of evicted and uneconomic tenants, there would still be a large surplus left for migration. This Union is situated in the two counties of Galway and Roscommon, and with each portion I shall deal separately. The total acreage of grass lands in the Roscommon division is 5,274 acres, valuation £2,060, which means an average of about eight shillings per acre. There are 243 holdings under £5 valuation and 285 under £10 valuation. The total acreage in the Galway division is 45,709 acres, valuation £23,304, which means an average of twelve shillings per acre. There are 798 holdings under £5 valuation and 521 under £10 valuation. The total for the whole Union is 50,983 acres, valuation £25,365. The total number of holdings under £5 is 1,041, and the total number of those over £5 and under £10 is 285.

57566. Mr. BRYCE.—That is, between £5 and £10?—Yes. The grass lands make up 32·4 per cent. of the whole area less the urban area. The population of the union was in 1841, 48,811; in 1891, 20,993; and in 1901, 19,279; which means a decline of 59 per cent. in sixty years. The inhabited houses numbered in 1841, 7,646; in 1901 they numbered 3,412, or 55 per cent. Now, in order to account for this deplorable state of things, I must, with your permission, take a brief retrospect of the events which led up to this extermination of the people. During eight years, from October, 1849, to September, 1857, the Incumbered Estates Court sold over twenty-five millions worth of land, of which twenty-four and a half millions worth passed to creditors, including £3,692,611 to purchasing incumbrancers. Its powers were in 1858 extended to the sale of non-incumbered estates and its jurisdiction perpetuated in the Landed Estates Court. Much advantage, no doubt, was derived from the convenience and cheapness of landed sales effected by these Courts; but to the unprotected cultivators their work has been fraught with almost as much evil as a new invasion. Many of the new purchasers were simply investors who, seeking the highest possible percentage for capital expended in the purchase, respected no rights nor customs, and regarded the old tenants as mere rent-producing machines to be worked to the utmost or superseded by other rent-producing machines, animal or mechanical, as it might suit their interests best. There were many of this class who, buying in anticipation of great profits, were disappointed, and sold out quickly. Some, finally, were speculators or land jobbers gifted with the most cunning commercial instinct, who scrupled not to deal with estates as they would have dealt with other articles of commerce. They bought when the market was low and sold when it was high, thus insuring frequent changes of lords. They raised the rent to a high multiple of its former amount when they became purchasers, in order that when they appeared as vendors they could point to a great rent-roll, leaving it to the purchaser to extort or evict as he pleased. They willingly agreed to stipulations to "clear the estate" on negotiating its sale, in order that a newer purchaser, a grazier or large farmer, should have no more trouble than that of razing the homesteads. Under that system, authorised by its devastating code, devastations were committed which exceeded the transplantations of Cromwell in magnitude, outvied them in the cruelty of the accompanying circumstances, and far surpassed them in the amount and persistence of the hostility they have evoked. Under the circumstances I have described, and by men of the type I have referred to, were those cruel and inhuman evictions carried out that brought desolation over a thriving and populous country. On the Galway side of Ballinasloe lies the Pollock Estate, a vast triangle of land, with its angles at Ballinasloe, Banagher, and Eyrecourt. When the grandfather of the present owner came from Scotland to purchase this estate, he found it a thickly-populated country covered over with happy homesteads. What is it now? A dreary wilderness in which, as far as the eye can reach, not a single human being, not the vestige of a human habitation, except a herd's

house, is discernible. All have gone to make room for "King Bos," who reigns supreme. There hundred families were driven from their homes and sent adrift upon the world to gratify the caprice of one who, before God and man, probably deserved less consideration than the last and least of them. It was not for nonpayment of rent that these people were evicted; in fact they were in some manner bribed by getting high prices for their little articles to give up their homes, which does not mitigate the crime one iota. On the Roscommon side still more heartless scenes were witnessed. I have listened to the tale from two of the victims, who settled on my father's property after being turned out. A man named Daniel Mathers, another of the Scotch speculators, came over here and purchased the estate of the St. George's. He proceeded at once to evict, although none of the tenants owed more than one year's rent. On Christmas Eve, that holy season when "peace on earth to men of good-will" is inculcated by every Christian creed, the absolute and resistless decree of this inhuman monster went forth. Neither the babe at the breast, the pregnant mother, nor the dying were spared; from the homes their fathers had erected they were thrust forth in the midst of a rigorous winter. Many of them died, some found shelter in the workhouse, the most of them went to America, and a few who got farms on other estates are still alive. The eviction I have described must not be considered an isolated exceptional event, nearly every parish in the union was familiar with such scenes. Now, a sentence of eviction from the land (in a state of society in which without the land it is impossible to support life) is tantamount to a sentence of slow but certain execution; and hence it is very difficult to distinguish in thought between the system of wholesale clearances that prevailed in these two counties and a system of wholesale murder. I now come on to some of my suggestions, and the first one is Re-afforestation. I shall only mention a few of its manifold advantages—shelter afforded to man and beast, avoidance of inundations, the moderation of violent winds and storms, the prevention of the silting up of our rivers by the binding action of the roots of trees on the soil, and last, but not least, the wood itself, which human labour could convert into articles of daily use. For manufacturing and other purposes we have to import wood, and there are our waste lands lying idle, derelict, useless. It is calculated that for an outlay of from £3 to £8, an acre of land could be prepared, planted, and fenced; that the return would pay the accumulated interest thereon in a few years, and that in fact in twenty years the acre would be worth about £20 or £30. There are in Germany entire districts wholly dependent for their living upon the forests and contingent wood industries. On the skirts of the Thuringian forest there are over 50,000 people engaged in the making of dolls and other toys, which realise over a million of money annually. Now, I do not want to say that we could compete with Germany and her forests in the matter of toys. I merely mention what can be done where wood is available. Ireland should, then, be replanted, and the cost should be undertaken by the Treasury, not by private enterprise. If due care had been taken of the forests of this country as they stood two hundred years ago they would be worth one hundred millions of money to-day. Before leaving this question of re-afforestation, I may mention the planting of osiers. The callow lands along the banks of the Suck and Shannon, which are liable to flooding, would be eminently suited for these semi-aquatic plants, which after two years begin to pay steadily, and run up to £25 an acre, less the rent of the land. The basket-making could be developed as an industry in the vicinity of such osiers. The next point is arterial drainage. The great problem of arterial drainage of Ireland has been under consideration by the ablest scientists for the past 150 years, and seems as far as ever from solution. This is to be regretted, for Professor Tyndall said it would raise our temperature about four degrees Fahrenheit all the year round, and be of immense advantage, not only to the land itself, but the human constitution and climatic influences. On arterial drainage depends largely the reclamation of from four to six million acres of land, half of which could be tilled and half planted upon a small scale. Something has been attempted by several landowners, but like afforestation it is a vast scheme, dependent on far more than mere individual, or even concerted private, enterprise. Other and poorer nations are great examples to us in this respect. The Dutch cultivated and drained the whole Haarlem Meer with a vote from their Parliament of £860,000, and they afterwards reclaimed a half million acres of the Zuyder Zee, which paid an immense profit to the State—something like about £12 an acre. Any benefit derived from the drainage of rivers in that district are greatly counteracted by the maintenance of a navigation level on the river Shannon. The profits and the convenience arising from the navigation of this river are inconsiderable—in fact, the subsidies of several County Councils have been withdrawn from the Shannon Development Co., as no trade was being done. If all impediments to the free flow of the river were removed, the lands in the catchment area would benefit incalculably—the callow-lands could be brought into cultivation, and the bogs would subside so considerably that they could be more easily utilized for any of those wonderful possibilities which, according to modern scientists, are in store for the peat mosses of this country. As to the milling industry, I would strongly advocate the subsidizing of mills by the Agricultural Department. The presence of mills would stimulate the growing of wheat and oats. And the next most important point is the establishment of agricultural banks or co-operative aided associations. This is a question of supreme importance to the farmers of this country, once they have purchased their holdings. As they become tenants to the State, there can be no abatement of rents in bad seasons, no permission of arrears of rent to stand over, but a hard and rigid system of merciless precision must prevail. The farmer must safeguard himself against the failure of crops. The only way he can do this is by having a ready means of procuring a loan to get him over the bad year. The one universal truth in regard to agriculturists the world over is that they must borrow, and agricultural credit under the present system is of the dearest and most unjust kind. The small farmer has either to go to the urban banks, with their high interest and excessive security, or he has to fall back upon the money-lending shopkeeper, who extorts usurious interest for loans and allows his victim to entangle himself so hopelessly that eventually the farm comes into his hands. All this can be avoided by the establishment of co-operative banks, the central principle of which is the co-operation or association of borrowers. Several of these banks have been established in the West, but I know of none of them in this district. Money could be borrowed in this bank at very low interest, say three or three and a-half per cent., and for periods varying between six months and several years. In connection with these banks, I would recommend the formation of co-operative agency associations, which would control the management of co-operative depots, and which would be connected with the railway stations by a motor service. This system would enable the farmer to sell his produce in the dearest market, to escape middlemen's profits, to have cost of transit considerably reduced, to procure the best manures, seeds and feeding stuffs, and every kind of agricultural implements at the lowest rates, and to obtain all the information he requires as to the state of the various markets. I might here make a suggestion relative to the railway systems of the country, which have done more to retard industrial development than the most pernicious legislation. I would strongly advocate State control, such as is found in Australia, where no profits, beyond working expenses, are aimed at; but if they chance to be realised they are given in bonuses to the officials, applied in relieving the rates on the travelling public, and expended on the extension of the railway lines. Although this system might not pay the State directly for its capital outlay, it must eventually pay by developing undeveloped districts and increasing the general commercial prosperity of the country, thereby increasing the national revenue and consequently easing taxation. I am glad to be able to quote from a speech recently delivered by Lord Brassey, on "State Railways," in the course of which he said: "We see what is taking place in continental Europe. In Germany, and in Russia, in Belgium, and more recently in Italy, the railways have become the property of the State. The requirements of the public are fully considered. The savings from the unity of management allow of considerable reductions in rates and tolls. We might begin," he said, "with State ownership in Ireland." I hope the day will come. The next question I have to consider is the advisa-

Sept. 30, 1907.
Mr. John F. Ward.

bility of the fundamental principles of agricultural science being taught in rural National Schools. This is a question of paramount importance to the rising generations of farmers in this country. We can never hope to be anything but a purely agricultural country, with industries dependent on agricultural produce, so that it behoves us, if we want to compete successfully with other countries, to teach the farmer's son the science of his profession. The beginning should be made in the rural National Schools, each of which should possess a small farm, say an acre, for giving a practical illustration of the various processes connected with tillage and market gardening. This could be done by itinerant instructors, or by having the teachers sent up for six weeks every year to Glasnevin, or some other agricultural college, for a practical course. On leaving the primary school, the boy could proceed to complete his education in a higher school, one of which should be established in each county. Being a Ballinasloe man, it is not without personal feeling that I allude to the commercial decay of this town. Ballinasloe about forty years ago was a prosperous town, having a great market for wool, wheat, oats and rape. It possessed four mills, one of which was a flour and the others corn mills; three tanneries, one brewery, several looms and two large buildings which were visited by a society of farmers for its meetings and agricultural shows. One of these, which you may see across the road, was built at a cost of £9,000, and is the finest building of its kind in Connaught. For thirty-seven years it has not been used for its original purpose, and often it has been put to the base use of stabling horses at the October fair; but, even in its degradation, it speaks eloquently of the vanished prosperity of Ballinasloe, and silently it tells its tale of the ruin caused by the exterminator's hand. The peasants that sustained its greatness were driven from their homes, and there is now a wilderness where once were happy homesteads and fields of golden corn. This decline of Ballinasloe is certainly due to the vast clearances which took place on the Galway and Roscommon side of the town. Those of the evicted who did not find their way to America came into the town, where, after battling with privation and pestilence, they at last graduated from the workhouse to the tomb. Another cause that contributed to impoverish towns situated like Ballinasloe was the influx of agricultural labourers and cottiers as an effect of the passing of the Relief Act of 1838. This Bill, as it passed the Commons, made the Union the area of chargeability for all expenditure, but the Lords, leaving the rule unaltered as to establishment charges, made the division the area of chargeability for the maintenance of the destitute who had resided within it before becoming inmates of the workhouse. The principal argument for divisional rating was that it would induce ratepayers to keep down rates in their neighbourhood by employment. It did reduce rates in rural divisions, but not by the agency of employment. When famine came, the system enabled the agricultural interest in many instances to evade its duty. To secure themselves against possible liabilities, many landlords and large farmers evicted the labourers and cottiers and drove them into the towns, where they became a burden on the division containing the towns. There the evicted labourers and their descendants remain, finding little employment in a community where trade has been made poorer by the burden of their relief. It would be impossible, observes a witness, to describe the odious acts of oppression that were then perpetrated consequent upon this electoral division rating. The poor were driven to the towns, estates were cleared, and notices to quit were served. As typical of the extent of the cruelty of the evictions, take this instance. J. Walsh, Esq., J.P., destroyed in 1845, near Belmullet, Mayo, an entire village, excepting six houses, according to the evidence of English writers, one of them Mr. Poulett Scrope, M.P. In two villages fifty houses were levelled. All this in mid-winter forty miles from the nearest workhouse. Similar scenes were witnessed all over the country. It is regrettable that the provisions of the recent Labourers Act were not extended to the towns where labourers are huddled together in filthy slums. Their lot has been infinitely more than that of the country labourer, even in his most wretched condition. The State is taking a motherly interest in the latter; for the former it has done nothing—it was the State in the past, by tolerating those cruel evictions, that produced those melancholy deposits of human wretchedness and vice in our towns, and it is the duty of the State to undo what it has done and try and better the miserable condition of the town labourers. I think a town like Ballinasloe, situated entirely on one estate, that of the Earl of Clancarty, should have been included in the 1903 Land Bill and scheduled as a congested area. What worse form of congestion can there be found than in the slums of a town like this, where the people live like rabbits in a warren. There are hundreds of acres of town parks held by a few men, which, if judiciously divided, would give a couple of acres to every large householder in the town, who find it very difficult to get milk or vegetables; every holder would till part at least of his two acres, and give employment to the poor, who are at present receiving outdoor relief to the extent of £500 a year. The town would be able to give employment to some of the labourers that are without employment at present. The people in towns are very badly off for milk and vegetables, and I think that if each householder got about two acres they would be able to provide all those things for themselves. The next point is the increasing insanity in the two counties of Roscommon and Galway. The increase of insanity in the counties of Galway and Roscommon within the last twenty-five years is alarming. Although the population has been dwindling, insanity has been increasing. In 1890 there were 731 patients in the Ballinasloe Asylum, and in 1905 there were 1,340, showing an increase of 83.3 per cent. In the decade between 1891 and 1901 the increase of the insane in all Ireland was 41.5 per cent. of the population, while the increase in Galway and Roscommon for the same period was 54.6 per cent., showing an increase in the two counties of 13.1 above the total for all Ireland. Now, it is a remarkable fact that the amount of insanity in proportion to the population is greatest in the most remote rural districts, while in the towns the ratio of the insane to the sane falls lowest. The primary cause of this is that the flower of the population have been emigrating, leaving behind the old and the weakly to propagate the race. Amongst other causes are the want of nutritious food, and what I consider a very potent factor, the loneliness and monotony of their lives. Take a man from the lonely hill-side of Connemara, or from a hovel near a bog. His mind from morning till night is occupied by one thought alone, and that is to provide a subsistence for himself and his family. This thought engrosses him so much that it becomes an obsession. One faculty of his brain is brought into use, and the others atrophy, and he eventually becomes a monomaniac or an imbecile. If isolated people like that were migrated into villages, where diversion and brightness would be brought into their lives, I believe a fruitful cause of insanity would be removed. Man is by nature a gregarious animal, and he cannot outrage nature's laws with impunity. There is only one remedy for this. Take the people from these barren desolate regions, give them farms of good land wherever it can be got, bring them into association with their fellow men; let them have their games, and, if possible, rural libraries, and I am confident that in the next twenty years insanity will show a marked decrease in this country.

57567. With reference to agricultural banks, you state that they could lend money at 3 per cent.—Yes.

57568. Where do the agricultural banks get their capital from?—I think from the joint stock banks.

57569. The joint stock banks finance them?—Yes.

57570. Do the joint stock banks charge them any interest?—Well, I think the joint stock banks would be able to lend them money at less than 3 per cent.

57571. And at what interest would the Provincial Bank or National Bank lend money to an agricultural bank—will it not be the same as to good clients. 4 or 5 per cent.?—Well, some of the joint stock banks, so far as I know them, charge 6 and some of them 10 per cent.

57572. Let us say 5 per cent. The agricultural bank gets capital at 5 per cent. and lends it out to its clients, and from those clients it must get a little more in order to pay the 5 per cent. and a little percentage more for costs and expenses, so that you get up to your 6 per cent. at once?—The class of people that patronise these agricultural banks would not be patrons of the joint stock banks.

57573. But the agricultural banks cannot make

noney, cannot coin money; they must get money from omewhere; they must raise capital from somewhere. You say that they are financed by the joint stock banks?—Not entirely, but there might be wealthy patrons that might put money into them.

57574. If they put money into them would they harge interest for the money or would they be philanthropists that would let them have the money without interest?—I do not think there is very much philanthropy amongst that class.

57575. I agree with you that I do not think you would get many people to lend money to the agricultural banks without getting any interest whatsoever; but if they charge any interest you must have that repaid by the agricultural banks plus something more? —Certainly, and therefore I would limit it to three and a half.

I should say six and a half or seven and a half would be nearer.

57576. Sir JOHN COLOMB.—I see that in your precis speaking of the Ballinasloe Division you mention an estate at present held on English tenure. What do you mean by that?—That is a property belonging to Mr. Hardy.

57577. You say it belongs to Colonel Mitchell?—Colonel Mitchell set it on the eleven months' system to a party, and it was set, I think on a ten months' tenancy afterwards to Mr. Hardy, the present occupier.

57578. My point is what are we to understand by the expression "English tenure"?—A yearly tenancy.

57579. You have indicated a prospect of a large scheme with an enormous expenditure. Who is to pay for it?—The State. We want nationalisation of the land and here the same as nationalisation of the railways.

57580. Is it to be repaid to the State in any form? —Eventually in the development of the country, the same as it is in Australia, where they have expended large sums in acquiring the railway system there. The two things are parallel, nationalisation of the land and nationalisation of the railways, and it pays the State eventually by developing the country.

57581. Is that part of your scheme—nationalisation of the land, so that individual tenancy would disappear—is that it?—I am a Socialist, if you put it that way, literally a sort of Socialist. I believe the State should manage everything. It manages the Post Office and the army. Well, we want it to manage the land as well.

57582. CHAIRMAN.—You have pointed out in the statement you have made to us the necessity which, in your opinion, exists for breaking up the land. May I ask you have you formed any opinion as to how that land should be acquired?—Yes. From the evidence of all the witnesses that have come before you to-day, I see no hope for this country at all in the higher agriculture. The remedy will come eventually.

57583. I think you do not see the point?—We have been told the land is required for Connaught cattle breeding, but we need not be afraid of that. My scheme would be this. Let the farmer get a new system when the land is sliced up into farms of twenty-five or thirty acres, let him fall back on the lesser agriculture, and that will pay this country better.

57584. This hardly was my point. I think you supposed that I was asking what sort the agriculture should be; but who are the men you are going to put upon those holdings?—First of all on that grass tract that is going to be sliced up I would put the contiguous evicted tenants, the uneconomic holders and their sons, and after satisfying their wants I would bring in migrants, then giving a slice to their sons also.

57585. The local congests and the congests on a neighbouring estate?—Yes; charity should begin at home.

57586. And then you would give some to the sons of these people?—Yes.

57587. And do you imagine that if you did that you would have any land over for migration?—I think the area of grass is so immense in the county that you should be able to accommodate them, that is, by giving them a slice in addition to their old holdings.

58588. Why should the sons of tenants of this generation be treated better than the sons of tenants in subsequent generations. Do you suggest that the State will be for ever able to distribute land among the sons of tenants. Take thirty years hence, the men who are sons of tenants now will have sons themselves asking for land. What is to happen then?—I would not go in for minute sub-division at all.

57589. You would not?—No; that would be dangerous.

57590. Those men when there is no land for them will have to get other forms of industry?—Yes, they will go to industries, to America or some other place.

57591. Therefore in giving allotments to the sons of tenants on these farms you are only meeting a very temporary evil?—If you give a twenty-five acre slice of a farm to a man, say, with two or three sons, that farm will be maintaining the father and the two or three sons that he has. It is better then to give another twenty-five acre slice to one or two of the sons if land is available in the vicinity.

57592. How then do you propose, if you are to do this to cure congestion—how would you help those people who are in uneconomic holdings in the western area?—I would compel the owners of the grass ranches to divide them. Compulsory purchase is the only solution.

57593. Please try to follow my point. You may take it from me that there is not enough land even if you compulsorily acquired the whole of it, for division amongst congests and sons of tenants. You cannot satisfy everybody. There is not enough of land. Statistics prove that there is not. Figures show it. What are you going to do. Are you going to give the land to the sons of tenants. Who is to have first claim?—I would say the evicted tenant first; the uneconomic holder after him; and then I would migrate in the congested area.

57594. But you said just now that the sons of tenants should come before the migrants. Would you migrate before giving any to the sons of tenants?—Yes.

57595. Then are we to take it as your opinion that the evil of congestion which, in other words, is the evil of poverty, should be dealt with before any new holdings are allotted to sons of tenants?—Certainly.

57596. And no matter where that poverty exists?—Yes.

57597. Mr. O'KELLY. Do you think that your view of the congestion problem is generally shared in the County Galway; ?—Yes; that is my opinion, and there is a consensus of opinion.

Mr. THOMAS FEENY examined.

57598. Are you nominated by a Roscommon District Council?—Yes.

57599. You are a representative of the Rural District of Athlone, which lies in Roscommon?—Yes.

57600. What do you want to tell us?—There is a list of the holdings under £5 valuation.

57601. You need not read it. We have got it all? —Very well. There are 838 holdings under £5 valuation, and there is about the same amount, as I will show you, from one parish here under £10.

57602. Are you in a congested district—is it scheduled?—No, it is not scheduled. There is about the same amount under £10 valuation, and some of the holdings under £10 valuation are down as low as £5 rent, so that the valuation in our Union of £8 or £9 might be on the £5. Then you have to take, for example, that that £8 or £9 valuation would be an uneconomic holding. An £8 or £10 holding I consider an uneconomic holding.

57603. And what do you consider economic?—Well, I would call a holding of about thirty acres of fairly good land economic.

57604. And that would give a valuation of what? —I suppose the best of it would be something like £15.

57605. Mr. O'KELLY.—How many acres would there be in an economic holding of £8 or £10 valuation?— About thirty acres. It might be all sand-hills and bog.

57606. CHAIRMAN.—It differs very much according to the land?—Yes, my lord.

57607. One may have thirty acres of land so poor that it is almost impossible to live on it?—Yes.

57608. Sir JOHN COLOMB.—Are you a farmer yourself?—Yes, sir.

Sept. 30, 1907.

Mr. Thomas Feeny.

57609. What is your acreage?—My acreage is about thirty, and the rent is less than £5.

57610. And what is your valuation?—£11.

57611. Poor Law valuation?—Yes.

57612. And therefore I suppose you would say that the poor law valuation is no test?—I consider it is no test. This is one parish, the parish of Kiltoom, and that would give you an idea of the whole. This is upon the east side, and I live upon the western side, and from the mearings of this Union of Ballinasloe to the mearings of Roscommon, thirteen miles alongside the River Suck, I suppose there is not a decent holding in the whole division. We have three electoral divisions alongside this river.

57613. Take two of these holdings you describe, and if you lumped them together would that make them all right in an economic sense, or what amount would it take to do it?—No less than three of the holdings put together would be economic.

57614. If you put three of the holdings together would that then be economic and would the occupiers be able to get on?—Well, they could, just; and it is by money earned in England and elsewhere they always live.

57615. Even then?—No; if you put three together.

57616. Do you think they would still be dependent on money from America—do you think they could live by the land without it?—I think they could.

57617. Would you have to move two out of every three?—You would in some cases. This is a parish now on the eastern side, the parish of Kiltoom. It consists of 230 small holdings of inferior land. There are ninety under £5 valuation; seventy-five over £5 and under £10, and the remaining sixty-five over £10 valuation. The majority of them consists of bog or peaty land, any upland in the possession of the tenants being of the worst description—poor, sandy hills. The tenants live mainly by the sowing of conacre, such as potatoes or oats, £6 to £8 per acre, and buying conacre hay on other lands a considerable distance away; by lime-burning and turf-selling; and principally by money sent from America by their children or friends there. That there is ample means of enlarging the holdings of the tenants and making them economic, as well as providing new farms for some of the young men of the parish, is beyond doubt, from the fact that there are 2,000 acres of grass lands within the parish boundary, and some of these farms will likely be sold in the near future.

57618. CHAIRMAN.—Speaking generally, from your experience in your district, do you think there is any other way of relieving the poverty in your district except by moving some of the people out of it?—I do, my lord, there is a greater facility for accommodation; for in Ballyforan there is a plot of land and mill which would suit for a factory, and in Derrycahill, which is another populous district, there is a plot, and the River Suck runs along it, and there would be great accommodation in it; and I know if there could be any factory in the locality that it would relieve them as well as changing them into other land.

57619. A factory?—Yes. That would be of great importance in Ballyforan. If there was one factory in that side of the district it would be of importance, as there is a big population on both sides of the river on the Galway and Roscommon sides, and it is twelve miles from the town of Athlone, and the rent of the land is also too high, and the landlords are not willing to sell. And even there is a property sold in part of the Union, in the lower part of it, and even after having bought it they cannot live on it.

57620. Mr. O'KELLY.—What kind of factory would you suggest?—Well, I would think a woollen factory. It is of the utmost importance that the district should be scheduled, and some definite action taken to prevent emigration and to improve the condition of occupiers of uneconomic holdings. Efforts were made by the tenants on some of these estates to purchase their holdings, but no sale was effected owing to the exorbitant prices demanded by the landlords, the prices asked under the present Land Act being from six to ten years more than those at which some estates in the neighbourhood were sold under the Ashbourne Act. For example, the Watson Estate was sold about twenty years ago at thirteen years' purchase; the Bailey Estate was sold about ten years ago at seventeen years' purchase, and the Hudson Estate about four years ago from eight to seventeen years' purchase under the 40th section in bankruptcy. The inspection of estates is of vital importance before the State advance is made, as it is the only safeguard against giving excessive prices for inferior land and the rushing of the tenants into improvident bargains. The Compulsory Bill is the only solution to the land question, as it is the only means by which the grazing farms can be acquired for distribution amongst the people, and provision made for new holdings for the young men of this district, thus providing them with a means of livelihood at home in their own country. A great many of the young girls of the district also emigrate every year, and for these an industry might be started. A crochet or lace-making industry would after a very short time become a most remunerative employment. The parish is composed of a number of small properties some of which are sold under the old Purchase Acts; the remaining landlords are willing to sell, the prices demanded being the only obstacle, from 21 to 24½ years purchase. Here is a list of the lands, with names of landlords, that are untenanted, and can be acquired for re-distribution:—Rockhill farm, Mr. Wilson (residential), 300 acres; Carroclohan, Mr. Connell (non-residential), 300 acres; Moyvannon, Mr. Smyth (non-residential), 200 acres; Ardmullen, Mr. Pim (non-residential), 400 acres; Kiltoom, Mr. H. Strevens (non-residential), 500 acres; and Newpark, Mr. Levinge (non-residential), 300 acres. With regard to bogs, the most important one in parish was taken over by the War Office authorities. Consequently the industries of turf selling and lime-burning are almost things of the past. There are upwards of 200 acres of bog greatly in need of drainage and requiring to be opened up for use, and roads made through it, as the bog is of little use in its present state. Here are the names of landlords with whom the tenants were endeavouring to negotiate, and the prices the lanlords demanded:—Mr. Waithman, 21 years' purchase; Mr. Mitchell (Curramore Estate), 22 years' purchase; Mr. Lloyd, 24 years; Mr. Levinge, 21 years; Mr. Goff, 24 years, and Mr. Hamilton, 24½ years' purchase. The holdings have very little industry. Turf, lime, and cabbage used to bring them in money, but now only a little. The reasons for the decline of turf and lime I have already given above. With regard to cabbage, the Agriculture Department has scattered information about cabbage-raising all over the county.

27621. Mr. O'KELLY.—That causes a decline in the cultivation of cabbage?—Yes.

57622. That the Department have given information as to the cultivation of cabbage?—Yes; and there is not so much of it used in Athlone and round Athlone. They used to have them all first in the market.

57623. And therefore the Department of Agriculture served no useful purpose by interfering?—Well, they did harm to one and a lot of good to others.

57624. CHAIRMAN.—Yes?—The people will leave their old homes provided it is made clear to them that they can live in comfort in their new ones. No care is taken to show this, so far as we know. Well, this is only one parish; but the land is inferior in all. And at the time of the valuation, some fifty years ago, there was part of it that used to grow wheat, and it was then the wheat was the principal industry, and it is on that account that the valuation was so high in that part of the Union.

Mr. JAMES RYAN examined.

Mr. James Ryan.

57625. CHAIRMAN.—You are a member of the Grazing Farmers' Association?—Yes.

57626. And would you like to offer some evidence to the Commission on behalf of that body?—Yes. I just wish to say that a great deal of the best land in Roscommon, at present used for grazing, is quite unsuitable to anything else.

57627. Why is that?—It is all deep, heavy, cold land, hard to till and hard work to till it, and it returns a very poor crop when it is tilled.

57628. Was it ever tilled. Are there marks of tillage on it?—Yes; part of it. There are on parts of it; a very long time ago. But you see some of it

tilled. Some of it is cropped at present by small farmers.

57629. At present occupied by small farmers. Do they not till it?—They till it.

57630. They till a small proportion?—They till a very small proportion. A man having a holding of say thirty acres may have an acre and a half under crops.

57631. Does that do?—No. The return is very poor and the labour is very great.

57632. Mr. Bryce.—What is the nature of the soil?—Deep, cold, heavy clay land. The small tenant in occupation of this land at present uses it principally for breeding young cattle or sheep, and the larger people might breed a horse or two; but they till very little of it.

57633. Sir Antony MacDonnell.—What parts of the county are you speaking of?—I speak of the centre of the county, viz.: Ballinasloe rather than Strokestown. Strokestown has more tillage land as well as peaty land.

57634. You speak about the land from Knockroghery to Ballinasloe?—Yes.

57635. There is a good deal of land there suitable for production?—There is, part of it. There is a good deal of it not suitable.

57636. Would it be possible to separate the land suitable from the land unsuitable?—Yes. That is what I think would be necessary.

57637. What part of it would be suitable for production. Take a farm in Knockcroghery of 100 acres?—You would not find any more than a third of it.

57638. Would thirty-three per cent. be the general percentage of the whole district from Roscommon to Boyle?—Till you get to Ballinasloe the proportion would be greater, but from that on it would be very much less.

57639. Would you say a third to a half. Take the land about Strokestown. You know that locality?—I do, very well.

57640. If you were travelling from Roscommon by Strokestown, Ballinasloe, Boyle, Castlerea, and all that tract of country, would you say that fifty per cent. of it might be cultivated and fifty per cent. left for grazing?—I do not think you would get as much as fifty per cent. on the whole of it.

57641. Forty?—Well, from thirty to forty, I should say; but you do not find all that land together there.

57642. Chairman.—You are a grazier yourself?—Yes; I am an occupier, and I graze about 600 acres.

57643. And therefore you have practical knowledge of the trade?—Yes.

57644. Tell me this. You have got a holding of 300 acres?—It is more than one holding.

57645. What is the biggest holding?—270 acres is the biggest holding.

57646. Supposing we have 300 acres. If you divided that holding of 300 acres into fifty-acre holdings, is there anything to prevent men occupying those holdings doing exactly the same thing that you are doing now?—No; not if you gave them fifty acres each. There is nothing to prevent them, if you gave them fifty acres each, but on the small farms of fifteen to twenty acres, which I understand they have been getting, I think there would be a good deal of difficulty.

57647. Now, take a twenty-five-acre holding. What would prevent a twenty-five acre man doing what you do on a smaller scale?—Well, he would be principally a breeder.

57648. Why should he be a breeder; you would buy at two years old?—Yes, I should.

57649. Why should not he?—Because breeding is much more profitable. It would pay. I would be a breeder if I could carry it out on a more extensive and larger scale. He could breed very much cheaper than I could.

57650. He could breed, it is true, but would the effect of this be to create a difficulty for him to sell his own stock?—I have been told that if all those small men were to start breeding on land now used for grazing, the result would be to create a difficulty in the disposition of young stock.

57651. Supposing he realises that, and does not breed the first year, but buys?—I do not think he could live on the profits of the small holding. I do not think that if I was confined to a fifty-acre, even with a greater profit than at present, I could live on it. I mean to say that if a man had a twenty-five acre holding the amount of stock he could graze on it would be very small, and with the small profit that he would get on it at present, I do not think he could live.

57652. Do you not think that he could live on it if he had an acre or two in tillage for the wants of his family and himself?—I suppose he could if the land was suitable for tillage.

57653. You see that in the case that we are speaking of, smallest farmers, they have a bit of tillage, but they do not count on it to any extent, for potatoes and things of that sort?—Well, yes; they have to get potatoes, but they do not count on it at all, I see.

57654. Sir Antony MacDonnell.—Have you seen any of those farms that have been split up?—Yes, and have not seen any people on them except very few. They seemed to be using them exactly as we are using them, except on a smaller scale. I have seen two or three farms split up, and they used them exactly in the same way as we use them.

57655. Then you think there would be nothing to prevent any man who had fifty acres from doing as you do?—Yes.

57656. Could a man with forty acres do it?—It all depends on the effect that the division will have on the country. Nobody can perceive what the effect will be. If things stand as they are, with the forty-acre or fifty-acre men going on in that way, and with the profits on stores going down, and that we have to depend on live stock for a living, I think they would have a very hard time of it; but nobody can say what will happen in the future.

57657. If the price of stock goes down to the grazier?—Yes. I think the fact of bringing down the grazier will have the effect of bringing down the stock.

57658. But if the price of stock goes down would not the grazier, as he is at present, disappear?—Well, I think if that went down the rents would go down in proportion. If the price of stock was cut down they would not be asked to pay the same rents.

57659. Is the rent a very important factor?—Yes, it is.

57660. Chairman.—Suppose four men got holdings of twenty-five acres each?—Yes.

57661. Is there anything to prevent those four men co-operating and knocking down their fences in the middle of their farms and renting that farm as a joint holding between them of 100 acres?—I am afraid it would give rise to a lot of friction and trouble. Of course there is nothing to prevent them if they cared to do it.

57662. There is nothing from the trade point of view to prevent them?—There is nothing from the trade point of view, that I see. I think it would be very unworkable.

57663. As a matter of fact, you think they would be likely to profit over it?—Oh, these things would spring up, about such things as the different ages of their stock, for instance.

57664. Suppose they bought all their stock at two years old, or at three?—If you go into a fair and one buys ten two-year-olds, and another buys ten two-year-olds, one set of ten might be a great deal heavier on the farm than the other.

57665. Do you mean that they would eat more grass?—Yes. Then you would have to have some standard of hunger, some standard of appetite. I think you would have a lot of trouble if they started that.

57668. But you think there is nothing in the trade to prevent it?—Nothing in the trade, that I see.

57669. Mr. Bryce.—You said just now that rents have gone. Would you say what period did you speak of?—For the past twenty years.

57670. But the past ten years?—No; not the past ten years.

57671. They keep pretty steady?—Yes.

57672. You have got the same for your farm now as five years ago?—Yes, five or ten years ago. The farm that I occupy is large. It was taken, I think, in 1883. It has gone down a pound an acre. It went down a pound an acre. That was ten years ago. It was taken at £2 5*s.*, and I have it at £1 6*s.* or £1 7*s.*, and that, of course, brings it down nearly a pound. The rent has not been lessened for the last ten years. Before, there were reductions given on it.

57673. Mr. Kavanagh.—How have you held that?—From year to year.

57674. As a yearly tenant?—A yearly tenant.

57675. Is there a judicial rent?—No judicial rent.

Sept. 30, 1907.

Mr. James Ryan.

57676. Sir JOHN COLOMB.—With reference to Lord Dudley's question about 300 acres broken into six, would not that mean that instead of one grazier you would have six?—Yes; that is what it means.

57677. And after the Government had striped the land and put up fences they agree then to graze it in common, and knock down the fences put up with State money?—I think the fences would end in a mess.

57678. Is not it an essential condition of success in carrying on grazing business, large or small, to have capital?—Certainly; you can do nothing without capital.

57679. And if a man is under an annuity for improvements made on his farm by the State he has to meet that annuity, and am I right in saying that he would therefore, unless he had capital, be very often forced to sell at a low price?—That is the fact.

57680. If he had not capital?—Yes, if he had not capital.

57681. His annuity perhaps is due, and his shop debts have to be paid, and unless he has capital he is forced to sell, is not he?—Certainly.

57682. Therefore, I take it that, looking at this grazing question from the point of view of the small holder and the big holder, the difference lies in the amount of capital, representing staying power, enabling him to hold on for months, instead of being forced to sell?—Yes; I think that is so. I do not wish to be taken as saying that there ought to be no division of grazing land. I think a large proportion of it could be divided profitably; but what I do say is that the large men are necessary to carry on the live stock trade in Galway.

57683. Quite so. But, assuming that the division is to be made, and an agreement come to among the six men to use it as a commonage between them, do you think, or do you not think, that that would lead to a sort of sub-division with regard to the land, and that it lends itself very much to that?—I do not think that that would work at all. If my opinion were asked, in my opinion, the last state would be very much worse than the first. For instance, the sons would get the right to graze so many cattle.

57684. Might not it end in one man with a considerable amount of capital getting all the land?—It would end in that. One man would have the whole and he would be farming in a great many places.

57685. Mr. SUTHERLAND.—Cannot that happen now?—It can happen now.

57686. With the present graziers?—With the present graziers.

57687. What is to prevent it?—It does not happen, as a matter of fact.

57688. Why?—They stock their own land.

57689. Why do you assume that it would not?—I am not assuming. I do not approve of it at all.

57690. Mr. KAVANAGH.—Do you see any objection to grazing in common?—Yes; I have a great objection to it.

57691. It is carried on very largely in Scotland?—I have no experience of any part but of this, in the West, but I think every man should work his own holding separately and have absolute control over it.

57692. And you never heard of grass land let in common?—In Roscommon that does at present exist. There is a large amount of grazing farms let for six months grazing every year, and any man who wants grass has no difficulty in getting it at a reasonable price.

57693. Does that succeed?—Small tenants who keep over their cattle graze them on these farms.

57694. Mr. SUTHERLAND.—When was the discovery made that grazing land was not fit for tillage?—Well, the discovery was made by the people there, which you could, if you got the opportunity, see for yourself.

57695. When was it made?—The men who work small farms seem to be fairly intelligent men, and I assume that they would till the grazing land if it would pay. On two of my own farms, for instance, I find that in one case a man with a holding of five acres does not till half-an-acre of it.

57696. Is not he the owner of the land?—I think so, and he does not till half an acre of it.

57697. Why?—Because the man would naturally till if it would pay.

57698. He does what he wishes?—And what there would be most profit in doing. They would till if tillage would pay. And on another farm a man has no tillage at all, and he lets it to me for grazing.

57699. Do you say it is an impossibility for tillage farming to pay when carried out on a large scale under present conditions?—Yes.

57700. Do you refer to Ireland alone?—To Ireland, to my own district.

57701. And what is there difficult in the condition of Ireland from that of other countries that do it?—I have already said that I have no experience of other countries.

57702. Then I ask you what causes the difference between this country and other countries where it is done?—I do not know anything of other countries. I suppose the land is lighter or sandier, or there is more sunshine. I could not tell you. I have no experience of other countries, but it cannot be done in our country.

57703. You cannot tell me what makes the difference, or suggest what it is?—I know nothing of other countries. I speak of my own country.

57704. Can you tell me why this land that was once cultivated has ceased to be cultivated?—I think it is because it was not suited for cultivation.

57705. You think it is best for grazing?—Quite so. I think the best tillage land and the best grazing land are two different matters altogether.

57706. Then you said that you graze 600 acres?—Yes.

57707. How much stock do you keep on an average on that? Have you a rule in your trade as to the number of animals an acre will maintain?—No; no more than I hold using the same farm.

57708. Have you no rule?—Well, the best part of the land would probably have a beast on the good land to every two acres.

57709. And what do you pay for that an acre now—£2 5*s.*?—I do not. I said for a time it was £2 5*s.* I pay less than 30*s.* now, but it is only for six months of the year that I am giving that. Then, of course, in the winter it would be much less than that—probably one-half.

57710. You pay less in the winter?—No, but it takes less stock in the winter.

57711. Have you an average for the year?—It would be very hard for me to make out an average. Changes of stock very often take place.

57712. Then, that is the best use for the best land in Ireland—feeding cattle?—No; I say there could be a great deal of the land divided profitably, but if you cut up the country into these small holdings I do not see what the people would do about the purchase of live stock.

57713. They would breed more stock, of course?—Well, of course.

57714. Yes, and till?—They will not till except they change their methods from what they are doing now.

57715. CHAIRMAN.—Do you say that grazing rents have fallen in the last 10 or 15 years?—Well, about 15, but not for the last 10.

57716. Do you think that on the whole, speaking generally, about here graziers have prospered for the last ten years?—I think they have held their own.

57717. Now they are quite content with paying the present rents?—Evidently they are. They are able to live and support their families.

57718. And there has been no demand for reduction of rent?—I daresay there have been applications for reductions of rent. You could not make any hard and fast rule. One rent may be higher than another.

57719. Speaking generally, the standard of rent for grazing land is not considered too high?—That depends on the length the land has been in occupation. New rents are, I consider, too high. On land that has been in the same occupation for 20 or 2[illegible] years the rent is fairly reasonable. But then, of course, I am only speaking from my own experience. People might be induced to give too much for land taken on the 11 months' system, and taken by the year.

57720. Do you think land dear?—Well, I should say so.

57721. Mr. BRYCE.—How do you pay your herdsmen?—In kind.

57722. That is to say, you give them so much land for feeding?—No; they rent their land. I give them so many sums. I give land for tillage also. A unit of cattle is a cow and a half. The usual thing in Roscommon is grazing and hay for a cow, an acre to every 50 acres of land that the man would mind.

57723. And then you give them so many cattle, too?—Yes.

57724. Then, you do not give them any cash at all —One man I do pay cash to; that is in lieu of grazing. He does not put in his grazing stock.

57725. Now, the general system being in that way, the result is that these herdsmen are practically the only inhabitants of Roscommon, except a few tenants, that never have any cash at all?—I think they are very well off.

57726. They are well off?—Well, most of them are. They have their calves and poultry, and a great many of them young stock and a pig.

57727. When those cattle are saleable they sell them and they then get cash, I suppose?—Yes; they work practically on the same lines as the small farmer in Roscommon.

57728. But as a matter of fact they are generally in the position that they have to go to a shopkeeper for credit, and for long credit?—I never heard of it.

57729. You never heard of it?—No.

57730. But there is only one time in the year when these people have any opportunity of selling their stock?—Yes; they will sell some in May, some in November, and they generally have some pigs to sell, and they work practically on the same lines as the 30-acre farmer.

57731. And you think they are just as well off as if they had farms of their own?—I think a herd on a good farm is just as well off.

57732. Sir Antony MacDonnell.—You say the herd to whom you have given four acres of land cultivates half-an-acre and keeps the remainder in grazing?—Yes.

57733. I suppose that the herd is engaged all day long in looking after your cattle?—The family is there.

57734. My point is that the employment of the herd on your business precludes him from working his farm?—It does not. He is not occupied two hours a day in doing my business.

57735. Sir John Colomb.—In your memorandum you refer to the injustice of depriving graziers of their means of living without compensation: you mean whose land is purchased?—I mean that if the State decides on splitting up the whole country into small holdings the grazing occupier is entitled to some consideration. You take away a man's living. He has nothing else to fall back on. If the State decides on doing that the grazier ought to be compensated.

57736. He suffers by the change?—He is ruined by the change.

57737. You speak of the actual holder of land under a certain class of grazing tenancy from the Purchase Act of 1903. What is the particular point you complain of?—I had a case of my own in my mind at the time. At present I occupy a farm that has been held by us for 25 years. After a while the landlord owing to the Land Acts changed the agreement so that we are not to take advantage of any Land Acts, but at the same time he gave us a substantial reduction, and we were in no worse position as long as the land was left in the landlord's hands than if we were judicial tenants, but now when the land is being sold that class of tenants are excluded from the benefits of the Act altogether.

57738. I take it that generally you complain of the uncertainty in your future owing to the change of policy?—As things work out at present one class of men will be left without land at all. It is quite possible that a man may have 600 acres of land at present, and if the new policy is carried out this man may be left without any land whatever without any compensation.

57739. In order to get some certainty would you be prepared to terminate the existing uncertainty if you were able to do so by purchasing your land on the 68 years system by paying an annuity for that period equal to your present rent?—I would not.

57740. You do not think, even to secure fixity of tenure and thus remove your present uncertainty, that you would pay an annuity equal to your present rent for 68 years?—I don't think I would. It would be a long look forward.

57741. Sir Antony MacDonnell.—In other words, the grazing rent you pay is not a fair basis on which to found a purchase agreement?—It depends on the number of years' purchase.

57742. No doubt, but would you pay 27 to 30 years' purchase?—I would not.

57743. Would you pay 20 years' purchase?—20 years' purchase of an ordinary grazing rent, I think, would be fair.

57744. Sir John Colomb.—Putting aside years' purchase and taking the question of annuity as against rent, you would not be prepared in order to get fixity of tenure and be certain of the future to pay an annuity equivalent to your present rent?—I would not. I think it would be too high.

57745. Sir Antony MacDonnell.—That is a most important admission from a gentleman of your knowledge and experience. You say you don't think that grazing rents ought to form a basis of purchase at a lower number of years' purchase than 20 years, or thereabouts?—Or thereabouts.

57746. Sir John Colomb.—You don't propose to lay down a rule for everybody. That is your view of your position?—My own position.

57747. Sir Antony MacDonnell.—As a typical grazier of Roscommon?—Yes. Anything like 30 years would be absurd.

57748. Mr. Sutherland.—And that is your opinion as a representative of your association?—Yes, but I think that as the thing is being worked out at present it is being done in a very haphazard way. No grazier whom I know in Roscommon would object to see a fair division of the grazing land at present, but what they object to is being left without any livelihood. If they were left to purchase up to the limit in the Act, say, £7,000 worth of land, speaking for myself, I would be quite prepared to surrender the rest of it.

57749. Sir Antony MacDonnell.—Would you go so far as to say that you would be satisfied with that land that is not suitable for tillage?—Yes, to purchase it.

57750. So that the portion suitable for tillage might be acquired for these purposes and the remaining portion of the grazing land left in the hands of graziers?—It should be sold to the graziers. I would not say exactly 20 years' purchase, but in or about.

57751. Sir John Colomb.—How does your rent compare with the valuation?—In one case it is under. In the other it is slightly over.

57752. Do you apply proposal to purchase at 20 years' purchase of the grazing rents to both holdings equally?—When speaking of 20 years' purchase of grazing rents I am only speaking generally.

57753. Are we to take your statement to Sir Antony MacDonnell as applying to both holdings equally?—Yes.

57754. Although in one case it is below the valuation and in the other case it is above it?—The valuation is very little test.

57755. Therefore I may take it the question is not one to be based on the valuation, but on the actual rent?—On actual rent.

57756. So that to estimate the purchase price on valuation would not, in your view, be exactly correct?—Not at all; not as grazing land anyway. Another thing I wish to mention is that I think a good many graziers would be prepared to sell their interest in land they have an interest in if there was any prospect of getting a fair price for it, any fixed rule for arriving at a fair price.

57757. Sir Antony MacDonnell.—Do you think could a fixed rule be arrived at perhaps in this way: would the valuation for the fair rent of a holding under the rent-fixing Acts afford a fair basis on which to estimate the price of grazing land?—Tenant's interest or landlord's?

57758. Both interests are concentrated in the landlord in the grazing land?—They are not. Take for example a leasehold farm occupied by a grazier. He has an interest in that that he may wish to dispose of either to the Congested Districts Board or the Estates Commissioners, and he will want to arrive at what his interest is worth. There has been no fixed rule for arriving at his interest. Take a leasehold farm of 200 acres on an estate purchased by your Board, of which the present rent is £300 a year. If the farm were sold to the grazing tenant in occupation his rent would be reduced by about one-third, and he would be paying £200 instead of £300. He would then have £100 a year more interest in it than before the operations of the Act, and if he were to sell his interest he would calculate this additional interest in his farm.

Sept. 30, 1907.

Mr. David Talbot-Crosbie re-examined.*

Mr. David Talbot-Crosbie.

57759. CHAIRMAN.—You wish to say something about the charge for the drainage of the River Suck?—I was examined in London and gave evidence of the very heavy charge on the occupiers for drainage. It would be a great incentive to purchase if the drainage charge could be written off in cases where landlords sold and tenants bought, and it would make things much easier.

57760. If a tenant buys land subject to that charge he has to continue to pay it in addition to his annuity?—He has to pay his share now, and if it were knocked off it would reduce his annuity.

57761. Do you mean he has to pay it as purchaser or as tenant?—He has to pay it as tenant. He pays the rent first and also a drainage charge. If he purchased he would have to pay his purchase annuity and also this charge extra.

57762. Does the landlord pay anything?—The landlord pays a portion, too. It is a very heavy charge.

57763. Is this charge by way of a sinking fund to pay off the original cost?—Yes; in forty years.

57764. You want the State to cry quits?—Yes. It has been paid for the last eleven years, which I think quite long enough. In the report of the Royal Commission on Drainage there is a lamentable description of the condition of affairs in reference to the Suck. It says: "In the case of the River Suck district, where the estimated cost was £106,481, the actual cost in round figures was £200,000, of which £50,000 was a free grant, £13,000 was charged on county cess, £67,000 represented the increased value of the lands, capitalised as an annuity at £4 10*s.* per cent. per annum over forty years, while over £70,000 was unfruitful expenditure, falling on the owners of land within the district. Upwards of £2,000 was also charged on the county for improvements in benefit. Of an expenditure exceeding £200,000, only one-third was reproductive, the remaining two-thirds yielding no return. These facts bring into relief one difference under the codes of 1842 and 1863, namely, that whereas the excess of actual over-estimated cost under the former code, produced by exceptional circumstances, was borne by the State the excess on works under the latter code was borne by private proprietors." Therefore I consider it a tremendous hardship on the proprietors and on the occupiers that they should pay this enormous annuity on this excessive expenditure, amounting to two-thirds of the entire cost, which the Royal Commission tell us is unproductive. This represents an annuity of practically £6,000 a year taken from the people of a poverty-stricken district. The hardship falls specially on the occupiers, as they had no voice whatever in the starting of the scheme. But it also falls on the proprietors, as they were lead to believe, firstly, that the scheme would cost much less than it did; secondly, that the "increased value" of the land was estimated at much more than it proved to be.

57765. Sir JOHN COLOMB.—Your contention is this, that inasmuch as the scheme was calculated to increase the productiveness of the land by so much, and it has failed to do so, therefore those concerned in the annual payments should not be called on to continue paying?—The loss should be borne by the State as it used to be in former years until this new code was established, which saddled on the people a loss of two-thirds of this expenditure which the Royal Commission has stated was unproductive.

57766. Mr. BRYCE.—The people would be willing to continue to pay the annuity on the part that is reproductive?—Yes. I think we have paid that already. We have been paying for the last eleven years.

57767. Sir JOHN COLOMB.—On the two-thirds the payments ought to cease?—Practically the whole thing ought to cease as an incentive to purchase where the landlords are willing to sell and the occupiers to buy.

* For former examination, see Appendix to the Fifth Report of the Commission [Cd. 3630, 1907], p. 202.

The Commission adjourned.

ONE HUNDRED AND TENTH PUBLIC SITTING.

TUESDAY, OCTOBER 1st, 1907,

AT 11.0 O'CLOCK A.M.,

In the Courthouse, Ballinasloe.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; JOHN ANNAN BRYCE, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.;

and WALTER CALLAN, Esq., Secretary.

Mr. HERBERT SATCHWELL examined.

Oct. 1, 1907

Mr Herbert Satchwell.

57768. CHAIRMAN.—You are engaged in the cattle trade?—Yes.

57769. Do you represent the Cattle Traders' Association?—I am a member of the Irish Cattle Traders and Stockowners' Association, but it is at the request of your Commission that I came as a witness.

57770. Where do you reside?—At Creggs, in the County Galway, just outside Roscommon County. I have some farms inside Roscommon County.

57770A. I believe your practice is different from that of your neighbours and that you go in for stall-feeding?—Yes. I till a lot and stall-feed.

57771. Describe to us what you do?—I reside on a farm of over 500 acres, Irish, and till 60, 80 or 90 acres every year, according to the size of the fields as they fall in. With the produce I feed cattle and sheep on my farm and send them to the meat market.

57772. You fatten your beasts yourself until they are fit for the butcher?—Yes. I sell them in the Dublin market or the English market.

57773. What age do you buy them?—I buy them at all ages from 6 months to 3 years old, just as I see animals that are suitable.

57774. What is the earliest age at which you can sell them ready for the butcher?—About 2½ years old. A lot of my cattle that I will tie up now will be only 2½; some of them will be 3 years old.

57775. I suppose you employ a good deal of labour?—Yes. I keep a staff of twenty to twenty-five men every day in the year, all round.

57776. Why don't other people do what you do?—Perhaps their land might be better, but mine is only very middling class land, and the tenure of land in the past prevented it a good deal, because if I were not resident on my farm I could not till it. If the tenure of land were different in the past, a farmer could build a house for his son on it, and I think you would have had a lot more residential holdings through the country, which would be to the betterment of all parties.

57777. Suppose a man had 40 acres of land could he do what you are doing?—I don't think he could, unless in a very small way. He would be more a man to raise stores.

57778. Why could not he buy like you? Would he have the knowledge?—He would have the knowledge, but on a thirty or forty acre farm he would want to carry a horse and two or three cows and a few sheep, and the succession would be coming.

57779. In your opinion if a man had thirty or forty acres of land he would have cows and young stock?—I would be very pleased to see a lot of the fresh land broken up and divided among industrious young fellows, but I believe a large man is required among them to buy the stores. They want some good grazing lands to prepare them for the home market and the English and Scotch markets.

57780. Would not English people come to buy stores?—They would not buy them in small numbers. A large farmer at home keeps them for six months of the year, and puts them in good condition for shipping. If the English and Scotch feeders did not get our cattle here in numbers suitable they would fight very hard to get in Canadian cattle, which would ruin the small holder, I believe.

57781. Sir JOHN COLOMB.—Do you breed stock?—All my sheep and some of my cattle.

57782. I suppose we may take it that in consequence of your having this great extent your cattle are not all bred by yourself, and that you are obliged to buy?—Yes.

57783. Do you buy from the small farmer?—Yes.

57784. Your fear would be, for instance, that if 500 acres of land were broken up into 25 holdings the small man could not do exactly what you do?—I don't believe he could.

57785. Though you can carry on successfully by breeding and finishing you don't think the small man could do exactly as you do?—Not on 25 acres of land.

57786. Do you think could he do it on 50?—I think he could, in a small way.

57787. But he would require more capital?—Undoubtedly.

57788. He has to get quick sale, for he is dependent on it for the payment of annuities and all that, so that he has to sell when the big man would not sell?—Yes. No doubt a tillage farmer requires a lot more capital nowadays. You have to invest a lot more money in farm implements and one thing and another, which swallows up a lot.

57789. You would be very glad to see the certain land divided up among industrious young fellows?—Undoubtedly.

57790. But the land you would like to see divided is land that requires to be worked in tillage to get the best out of it?—Yes.

57791. You don't mean that you would indiscriminately apply that policy to land naturally more profitable in grass?—Yes, but at the same time I would like to see even this very good land in the hands of residential holders.

57792. You are anxious for such a system as would produce the residence of men under economic conditions under which they could live comfortably?—Yes.

57793. Mr. BRYCE.—Do the Scotch and English buyers come a great deal to the West to buy cattle?—Yes, or their representatives.

57794. Suppose a great number of graziers owing to the breaking up of grass lands disappeared would not there still be a market for store cattle?—Not to the same extent, because a good many of the graziers buy in small numbers, and keep them a year or six months to make them better, and forward them to the Scotchmen; or their representatives will come and buy them in scores or 25's, which means giving him less trouble, and securing a more uniform class of cattle than if he bought in any other way. We have to average them after six months.

57795. Still they do come to buy the young cattle now?—Yes.

57796. They buy even calves?—I don't know about calves. There are no better buyers at the Mid-Roscommon fairs for good young bullocks fed to 1½ years old than the Scotchmen.

57797. They must take them in odd bits?—Yes, they do.

57798. Why should not they go on buying them in odd bits?—Some men will come for that class, and some for 2½ years old. They won't buy them singly. They would be more in lots.

Oct. 1, 1907.

Mr. Herbert Satchwell.

57799. Did you hear Lord Ashtown's evidence yesterday with regard to the classification of the lands of East Galway and Roscommon? He spoke of some lands as being entirely unsuitable for tillage?—I did not hear his evidence.

57800. He distinguished four classes of land. He said that some of the land was so rich, heavy, and deep that it was not suitable for tillage; is it your experience that that is so?—There are some lands in Roscommon that I don't think it would be right to break. They are not very suitable for tillage, and would be more profitable in grazing. You would grow better crops on nice lively light soil than on this very deep soil.

57802. There is a good deal of clay land?—Yes, in Mid-Roscommon, if you took from Strokestown, Elphin, and Boyle in the North, and round about Tulsk.

57803. What kind of land are the plains of Boyle?—Rich feeding lands.

57804. Would they be suitable for breaking up?—Some of them would, where the sub-soil is of a gravelly nature.

57805. Where it would not be too damp and heavy?—Yes.

57806. In former times were not those heavy lands cultivated?—I believe so. I have not seen them cultivated.

57807. Was not it the custom to burn the soil?—That was a bad custom.

57808. I am sure it was, but they did it?—Yes, I daresay they did it; but it ought to be condemned by everybody that is in authority.

57809. It ruins the land?—Of course it does.

57810. The upshot of your evidence so far as English and Scotch buyers are concerned is that they do come at present and buy odd ones?—Yes.

57811. Even in Donegal we had evidence that they buy them at six months old?—I don't know that, but I know that the Scotchman or his representative comes to our fairs to buy 1½ year bullocks in condition. They stall-feed that fellow. They say he stall-feeds better than older ones. When they have the calf-teeth they can eat better than when they begin to work with their grown teeth.

57812. Is it your experience that you can get as high a price for your cattle in the English markets as the Aberdeen finisher can?—We cannot compete with the Scotchman.

57813. What is the reason?—I think they feed the stores better from the start. Down in Roscommon we have a fine beast to look at, but given fair play it would require another year to mature him, but we are going in lately for a cross between the Aberdeen Angus or Hereford and the Roscommon heifer, which produces a very good beast. It would surprise you how much he would weigh. If you brought him to the Dublin market you would have the London chaps at you and the Dublin fellows.

57814. Sir John Colomb.—Which do you prefer, the cross of the polled Angus or the cross of the Hereford?—You would get half a dozen practical men and they would be divided on it.

57815. That is the reason I ask you?—I like the Aberdeen Angus.

57816. Mr. Bryce.—When you breed your own cattle from the very start, from your own cows with your own bulls, do you find that the beast when finished is not as good as the Aberdeen beast?—I breed some with my own cows. I just keep from six to ten cows to supply myself and my workmen. I let an Aberdeen Angus on them. At 2½ years old they are the finest cattle in the market.

57817. Just as good as the Scotch?—Just the same.

57818. When you speak of not being able to compete with the Scotch you mean when you buy a calf from somewhere else?—Yes. Let me feed my own calves from the start. It is not every man who has the roots or things like that to give them.

57819. When you breed your own calves and feed them from the start they are as good as any Scotch beast?—As good as any Scotch beast if they are properly fed.

57820. Chairman.—They will get fat, but the fat does not mix up with the meat?—They get what they call the calf lay on them if they are fed from the very first.

57821. Mr. Bryce.—Do you own your own farm?—Yearly, and I have some on the 11 months' system.

57822. What is the difference between the yearly tenant and the 11 months' man?—We have some farms that my father had sixty years ago as yearly takes as long as we paid the rent. The good old landlord came down a bit in his rent. We had a meeting and paid our rent as well as we could. I think if such farms be taken from graziers they certainly ought to get some compensation. In consequence of the tenure of the land farmers could not be let on those lands where a lot of young fellows might have built houses. Otherwise some would be living on them now, giving employment, and this would be all the better for the country and the land would be improved and so on.

57823. Sir John Colomb.—You mean that by reason of the agreements of letting being from year to year certain of the tenants were deterred from building houses?—You could not do it. You would not be allowed to do it.

57824. Mr. Bryce.—But you might have got a lease of this land that is taken from year to year, as they do in Scotland, where they have 21 years' leases. Then you might have been able to build?—They did not care to do that.

57825. But there is some leasehold land, we heard yesterday?—There is.

57826. You have got no kind of tenant-right at present?—No. I believe it is about being sold out to the Estates Commissioners. Though I am only a yearly tenant I have a letter to say that I will be treated the same as tenants who had judicial tenancies.

57827. Suppose you were buying, what number of years' purchase of your rent would you be willing to give?—Of the grazing land or the land I live on?

57828. The grazing land?—If I could buy one or two grazing farms I have to work in connection with the farms I raise the young stock on I would certainly give 20 or 22 years' purchase of the rental. Having this large farm of middling land I could raise a lot of young stock that I could send on to the good land that would come home, so that I would have very little trouble in stall-feeding them.

57829. During all this course of years have you been paying the same rents to the landlords or have the rents been falling?—The farm I am living on I took twenty-four years ago, and I am paying the same rent to-day.

57830. That is the land on which you breed?—Yes.

57831. With regard to the grazing farms?—I am not more than about ten or twelve years in occupation of the outside farms, and I am paying the same rent, but not as much as was paid by my father.

57832. But there has been no sensible fall in your experience on the land you occupy for the last ten years?—No.

57833. Suppose you got a lease for twenty-one years, would you be willing to give your present rental for twenty-one years?—I would, if I was allowed to purchase the farm in connection with the farm I live on.

57834. But if you were merely leasing it for twenty-one years you would not be willing to give the same rent?—I don't think I would.

57835. What are you afraid of?—It would not be so valuable to me. Some of these lands in Roscommon, if you have to go into a fair and buy stock in May or spring to sell in October, are not nearly so valuable to a man who has a residential holding, as he can buy every class of stock, and keep them until he can sell them to the best advantage. If he buys in May and sells in October again fellows are often ruined at that sore of work.

57836. What is the present rental of your grazing farm—about 30*s.* an acre?—Yes. The best farm I had was £2, and really I think it was the cheapest land I had; but it has been bought by the Congested Districts Board. It is Captain Caulfield French's property. I had it from Sir Nicholas O'Connor, who was a middleman. As soon as it was bought I surrendered it at once.

57837. It is now being divided among migrants?—No. They have it in their own hands yet, taking in grazing. They treated me very well. They set it to me for six months, and gave me leave to retire. I had a stock in hands, and they gave me leave to retire at the end of six months. I gave it up, and they have it now set to poor people in the neighbourhood, from whom they take in stock at so much a head.

57838. Suppose you were offered a lease for fifty years at 25*s.* an acre of the land that you have for

30s., would you be willing to agree to take it at that rent for fifty years?—I would, indeed.

57839. Sir JOHN COLOMB.—How does your rent on the property of the Congested Districts Board compare with the valuation?—It is a lot over it.

57840. Therefore, when you say you would be willing to purchase at twenty or twenty-two years' purchase, that means more than twenty or twenty-two years' purchase of the valuation?—What I said was that if I was allowed to buy one of my outside farms to work in connection with my home farm I would give twenty or twenty-two years' purchase of this outside farm.

57841. When you talk of the outside farm, is the rent you pay below or above the valuation?—I don't pay the taxes, and I don't know really what the valuation is.

57842. Do you pay rates and taxes on any of these lands?—Not on the outside lands, but I do on the home farm.

57843. Therefore, the twenty or twenty-two years' purchase on the outside land would mean really without deduction for taxes or rates?—Yes.

57844. Do you in your business come across yearlings, young cattle, brought from Kerry, Cork, and away down south?—Yes, sometimes. I may buy a few calves from what we call the Munster dealers, who bring them up. You may get a few good-looking, healthy calves among them. Perhaps I would buy two or three out of twenty.

57845. Mr. BRYCE.—Speaking generally, do you think the graziers in Roscommon have been doing pretty well during the last ten years?—I think that the trade was more even for the last ten years than it was before that, especially during the last four or five years, and the last couple of years were not bad; but, of course, in 1879 they got such a whack that they never got over it.

57846. Lately they have been doing better?—Yes.

57847. Do you think they are much in debt to the banks?—I could not tell you that. I know nobody's business but my own.

57848. You don't hear anything?—I may hear a good deal.

57849. You don't always believe it?—I do not.

57850. Sir JOHN COLOMB.—You say that in recent years business has been steadier?—Yes.

57851. Does not that date from the introduction of the Bill prohibiting Canadian cattle?—About eighteen months ago it was threatened they were coming in, and people did not know what to do. There was a sort of little panic on. Take wool. For the last three years we got more. The price was more even.

57852. When you spoke of the market being so unsteady years ago, was not that due to the fact that at that time cattle could, by Order in Conucil, be prohibited or not prohibited—it was the uncertainty as to what might be done that produced the uncertainty as to price?—Yes.

57853. Mr. KAVANAGH.—You say you buy stock of all ages?—Yes.

57854. You say you buy calves. What do you do with them?—I keep them on. I don't remember when I sold a store beast. I keep them on until they are fit to go to stall feeding.

57855. You don't sell the calves again?—I don't sell the calves.

57856. How long do you keep them?—If a calf is bought at six months old it is put in a stall when it is two and a half years old, or perhaps I might have to keep him a little longer.

57857. Suppose that this land was broken up into thirty-acre farms, would not the small holder be able to carry on his calf until it is ready for the Meath man?—I daresay he would; but on a thirty-acre farm you have the succession to keep up; and I doubt if he would be able to feed them all until they come up to the age of selling them.

57858. Would you say a forty-acre farm?—As you increase the acreage you would be coming nearer the point.

57859. You referred to the Congested Districts Board giving out grazing; would you approve of that system?—If they give it to deserving poor people, as I am sure they always do, it is helping them on, but there is a great deal of complaining, I may say, in their dividing the lands.

57860. Apart from that would you approve of the system of giving out grazing in a congested area?—For the time being it is a great thing for the poor people to get a place for their little cattle. They get it cheaper from the Congested Districts Board than they would from a private individual, but I think it would be better to divide them up as soon as they could, and place the deserving parties upon them.

57861. The dividing is very much more expensive, owing to fencing and so on?—I think it better for every man to own his own part, and to know what to do with it.

57862. Mr. BRYCE.—Are you alone in Roscommon following this system of stall-feeding cattle up to the finishing point?—There are three or four in my neighbourhood who do it.

57863. But it is not general?—Not at all. I don't think there are many men in Roscommon stall-feeding. I don't know if there is one who stall-feeds twenty-five beasts.

57864. How many do you stall-feed?—I stall-feed on an average about 200 beasts every year.

57865. Sir JOHN COLOMB.—Do you consider, taking the average small farmer in the parts of Ireland you know under the present conditions, that a stall-feeding programme is the thing for him?—Not for the small farmer of twenty acres. I don't see how he could do it, and keep up his succession; but I have no doubt, and I say without fear or favour, that if people lived on their farms, even if they were large, things would be a great deal better. It would encourage everyone, and help the labourers, and draw them from towns and cities, where they have gone to live.

57866. Mr. BRYCE.—How can you force people to live on the farms?—I don't want to force any man; but I really think that if the tenure of land was different, and they got a chance of building on it, you would see a great many more residential holdings.

57867. You mean he should be the owner of it?—Yes; I daresay.

Mr. THADDEUS GLYNN examined.

57868. CHAIRMAN.—You are nominated by the Ballinasloe District Council?—Yes, and by the Fohanagh branch of the United Irish League. I am a District Councillor and a farmer, and I have just put down some remarks in writing. I am myself the son of an evicted tenant. My father was evicted in 1852 from the holding that the family held for, I could not tell the centuries or generations. He was evicted from there though his rent was paid. He had to leave it although his rent was paid, to help to make a large grass farm for somebody else. So with my uncles also——

57869. I do not want to curtail your evidence, but you know we have nothing to do with your father's or your uncles' eviction. You must keep a little more closely to the point of our inquiry?—This is the complaint that I have, that it is a very grievous thing for a man to be evicted from a farm that he is willing to pay his rent for, and that all his family before him did the same in.

57870. We have no power to alter that?—As I say this was done to make a large grass farm. I represent the division of Annagh in the union of Mountbellew. There are 98 families in the division at £5 and under, and some of them as low as 5s. There are 2,462 acres 2 roods 32 perches of untenanted land in that division, and if the people had it they would have a way to live in comfort compared with now when they are living in starvation, watching for money from America and England from their children to try and eke out a living. They hold their land under conacre and pay £3 and £4 an acre to the large grazier, expecting that from their children in America—robbing those poor children to try and keep the large grazier in existence in Ireland. In the parish I represent there are about 3,000 acres of untenanted land. There are only 80 families in the whole parish, and these 80 families have only about on an average, eight to ten acres at a valuation of from £2 up to £7. All these are held under conacre

Oct. 1, 1907.

Mr. Thaddeus Glynn.

and are paid for by money which comes from either England or America. In the Clonbrock division, adjoining mine, the land is just held in the same manner. There are 215 tenants in the division of Clonbrock at £5 and under, and there are only seven or eight up to the value of £20. In the Annagh division there are only five at £20, while there are 98 at from 5*s.* to £5. In my district, my lord, we have made several applications to purchase under the Act of 1903, but we have been refused, if the tenants did not buy their own small holdings. They wanted to keep the graziers in existence, and to give no land to the poor people. They simply said: "Let every man buy his own, or if not there will be no sales." At any rate there has been no bargain completed in my division of Annagh under the existing Bill of 1903 up to the present. There is not one question settled between the landlords and the tenants yet in the Annagh division, I am sorry to say. In every case I know they asked for sale, but they got no sale. There is no sale complete. In two or three cases I know where three or four branches have met, and we petitioned Lord Clonbrock, Mrs. Mahon, and Mrs. Johnston, saying that we would buy through the Estates Commissioners and give them whatever the Estates Commissioners would think fit and fair, and that the tenants would abide by that, but they, the Estates Commissioners, refused, except we could make our own bargain with the landlords. However, there is no sale yet. We got a letter from Lord Clonbrock to the parish priest to say he would sell if he got 22 years' purchase out of his agricultural holdings, but that he could not sell the grass lands except the Estates Commissioners brought him up to such a sum as would make his net income; and that if the Estates Commissioners did not offer him that, he would not accept the sale. The tenants look at that in this way—they think the Estates Commissioners would do justice between the tenants and the landlords, and that they would pay from the Government money nothing but what would be just and fair. That is the opinion of the tenants. I have another thing in my parish and district to complain of. In the village of Lisnacreena, which is in my branch and division, they bought under the Ashbourne Act. They bought their small holdings in 1899 at 18½ years' purchase, and they are at from £2 valuation up to £5 and some of them £6, and there are only three cases out of seventeen in the whole village where it is over £10. There are three other farms bought under the Ashbourne Act in the same year beside where some of these poor people were crammed into these small holdings, say about 1855, after the famine, off a large estate of 1,100 acres. The landlord at the time cleared them out. Some of them had their rents paid; more had not. At all events they were cleared out and crammed into this little estate, where they are now so congested; and if compulsory purchase came to pass, and the interest of these farms acquired from those who bought them under the Ashbourne Act, and compensation given them, the land could be divided amongst these small holders, and congestion would be relieved. A man cannot live on a farm at £2—from £2 to £7 valuation. He has to go to the conacre meadow.

57871. Chairman.—We have heard a good deal about that. We know the difficulties of living on a small holding. That has been described to us before. There is nothing else you want to say, is there? I would ask the Commission to do this—to say that there is no remedy against unwilling landlords except compulsory purchase. I have known them to refuse purchase through the Estates Commissioners. The remedy is to give compulsory purchase powers to the Estates Commissioners, and give them power to do justice between landlord and tenant. Another estate I would like to make some remarks on is the Usher Estate. On this estate in 1899 Mr. Usher offered sale to his tenants at 18½ years' purchase. When the Act of 1903 came into operation he wanted 25 years' purchase. Now it is in the hands of the Estates Commissioners for something like about eight months, and the other day in the Boardroom at Mountbellew we had the arbitrator, Mr. Arthur Taylor, down there arbitrating for labourers' cottages, and he had a letter from the agent of Mr. Usher, and also from the Estates Commissioners, to say that the sale of the estate is not complete yet. That is the information that the Inspector gave the Board. So you see, my lord, that he raised the price five years and a half from 1889 until the Land Act of 1903 was passed, and the people cannot see what market raised the land that high, or where the improvement had come to the country that would raise the land from 1899 to 1903 by 5½ years' rent of a rise.

57872. Mr. Bryce.—Why did not you buy at 18½ years?—I was not a tenant on the estate.

57873. Why did not the tenants on the Usher Estate buy at 18½ years?—Well, they were expecting increased holdings. Their holdings were too small, and they wanted more land. They were congested. There were thirteen under £5, and some of them as low as 5*s.* valuation, and it was no good to purchase the holdings they held. They were people who in 1850 and 1855 were taken from the good land, and driven into the slough and the brink of the bog and of the river, which is famishing their crop every season. There is another remark I would like to make as far as my division is concerned. There is a river running through it, and in wet seasons such as this they have to face ruin. The landlord would not drain the river or clean it, and the people's crops are drowned. I would ask your lordship and the other Commissioners to recommend that something should be done in cleaning rivers such as this, where such damage is done in wet seasons, and where the people were unfortunately taken from the good land, and put to the brows of these rivers.

Mr. T. B. Hibbet examined.

Mr. T. B. Hibbet.

57874. Chairman.—Where do you live?—At Kilconnell, Co. Galway.

57875. Are you a large farmer?—I farm 100 acres.

57876. Do you do anything else besides farming?—I buy and sell stock on commission for a couple of thousand acres of land owned by gentlemen. I do not manage any land but my own.

57877. Your work there is entirely connected with land?—I have a shop, too—a small shop.

57878. And a licence?—Yes, my lord. The evidence I have got to give will be mainly on the question of the great National evil of grazierism, and I will only touch on the lesser one—the misfortune of congestion. Grazing land for the raising of store cattle is only adaptable to a remote and sparsely inhabited country—

57879. Chairman.—Are you reading from the precis which you have given us?—From a preface to it. The letting and hiring of grass lands wanted by the people for cultivation is politically immoral in any nation. The fertile land that is allowed to produce only grass, for the rearing and feeding of store stock, is more than half idle, and the Government that prefers the raising of the bullock to the growth of the man is unworthy and stands self-condemned. Hardly without any exception in the West of Ireland, you will find congestion on the fringe or back end of every grazing farm. There you will find some few people, on fag-end patches, whose little holdings probably were not worth the levelling during the eviction period, left as you find them for that reason, or perhaps they were quietly transferred as an alternative, from fair-sized farms, which they or their parents occupied, on the now green broad plain, comprising the grazing farm beyond. Thus, wherever you find grazing farms, you will most probably find congestion hard by. They are two evils, one blocks tillage; the other tends to clog the physical aptitude of a naturally agricultural people. The present eleven months grazing system in the West is detrimental to cultivation, injurious to the quality and value of cattle, and its pernicious example has changed in a great measure the thrift and industry of the people, to sloth and negligence, and its continuance is a national loss. It is conducted on the methods of hiring grass lands as cheaply as they can be secured, making hard bargains, buying and selling stock, and running the management of the stock and farm as near to starvation lines as possible. The present western grazier barely tills sufficient to supply his domestic necessity, he can hardly be said to give either employment or labour; in fact, the greater number of his class fail to keep their fences in proper repair; neglect cleaning watercourses and drains through their farms, and allow weeds, thistles and

furzes to spread as they may, all over their pasturages. In many cases they are allowed sums from the rent by the landlord, to be expended for these necessary purposes, but the landlord is indifferent as to the application of the money. As a consequence of this neglect of drains, watercourses and weeds, and inattention to furze waste, fully more than five per cent. of the grazing farms of Connaught are absolutely worthless to either king or country. While the grazier is able to make the rent and any little surplus with it, and while the landlord, who is probably an absentee like Clanricarde, gets the rent quietly, both are satisfied and utterly indifferent as to what the nation otherwise may produce, or presently lose. The first and only thought of the grazier is to save and work the land with the least possible outlay ; his cattle, shown in the spring fairs, bear remarkable testimony to his stinginess. They are extremely thin and emaciated, and it is no uncommon sight to see some of them dropping down on the fair green from faintness. How different in appearance and value, side by side, is the poor man's two or three beasts, although, as is often the case, he is only the holder of a tightened little farm? He has sold before he has barely stood them on the fair green. They have been better fed and better sheltered during the winter, and will finish into beef three months earlier than the grazier's, and they have now realised from three to four shillings per hundred live weight more than the grazier's hungry, outlying lots. The extraordinary, though true, report often astonishes one at these fairs as being "very dear" and "very cheap." All the poor man's cattle are bought early and well by the exporter and keen County Meath fattener, while the lots of graziers' cattle are left ; they will not be asked for by the exporter, and will be only purchased late in the day by the County Meath feeder, who has to do with them ; yet dreading the time they will finish when the English markets are glutted with American beef late in the season. It is a well-known fact that the Connaught grazier has very often to accept a very little profit for his six months' keep of cattle ; therefore, if he did not save, he could not continue, and he cannot, nor never can, be of use or benefit to the country. Hence, as a proof, in the very best part of the country, in the midst of the finest grazing lands, you will find a dearth of labour and the poor in poverty. The Barony of Longford in East Galway is the least remunerative district in the county in all Connaught, perhaps in all Ireland proportionately. It is the most fertile barony in the county the highest rated ; its soil is rich all over, abundant with every quality, suitable for any purpose agriculturally. Its 99,000 acres are nearly all grazed, or in the keep of graziers. Its twenty miles across from Ballinasloe to Portumna is without market or bank, and over that fine reach of country, with the exception of the diminishing little town of Eyrecourt, there are only two nominal villages which fail to break the ever-appearing view of stone walls green fields, herds of cattle and flocks of sheep. There is no other barony in the County of Galway from which so many people were evicted. Its population in 1841 was over 33,000. Its population now numbers under 13,000. There is no other barony in all Connaught recording such a decrease per cent. of houses, 58·73. In the Barony of Longford the return shows that since 1841 three thousand two hundred and eighty-three houses were levelled to the ground. After the evictions the little town of Eyrecourt became tradeless, and the market of Ballinasloe almost trafficless. With the disappearance of the small farmer ceased the produce of the soil, the grass only grew when the corn was reaped, and the bullock grazed where the labourer earned. This barony is but a typical case, but perhaps in a greater degree, of all the Connaught baronies. It is put forward by some that if these vast grazing ranches are bought by the Government for distribution, and the eleven months graziers knocked out, the number and value of cattle will decline, and that it will be most difficult to dispose of small store cattle. To demonstrate the absurdity of this fallacy, take one hundred Irish acres presently in the possession of a grazier and used by him. Its complement are eighty ewes and thirty cattle. Divide this one hundred acre farm into four holdings of twenty-five acres each holding. Each occupier can till five acres, meadow five acres, and the remaining fifteen acres will maintain one horse, two cows, three two-year-old cattle, three calves and twenty sheep. These figures show there will be no diminution of stock in the country, even though all the land should be divided. Yet it will be asked if there are no graziers to buy poor men's store cattle, how will they be disposed of? And if the Canadian stores are allowed into England what will Irish stores be worth? The twenty-five acre holder I have indicated I have put down as having five acres of tillage, I will say two acres of oats, two acres of potatoes and one acre of turnips. No matter what the price of store cattle, high or low, he will soon find that his best system of farming is to fatten all his stock, his cattle as well as his pigs. By proper cultivation his two acres of oats, which he may utilise for stockfeeding, will return him two tons oatmeal ; one acre of his potatoes for like purposes will return him seventeen tons, a ton of his turnips and a ton of his hay added, and he will have sufficient of the most excellent food to fatten eight cattle, besides a surplus for pig fattening also. Three stones of the potatoes and meal cooked, with a stone of turnips and a stone of hay given each day for ninety days, will finish any beast fairly put in. The farmer will thus have the highest price for his crops, and will have the benefit of selling in his yard without cost—

	£	*s.*	*d.*
2 tons of oatmeal at £9 per ton ...	18	0	0
17 tons of potatoes at £1 6*s.* 8*d.* per ton	22	13	4
1 ton of turnips at 10*s.* per ton ...	0	10	0
1 ton of hay at £1 5*s.* a ton ...	1	5	0
Profit of fattening eight cattle, allowing £5 5*s.* for fattening each beast ...	42	8	4

The manure will be left for the land, and no artificial manure will be required for following year's cultivation. Here follows profit and employment, and twenty-five per cent. of the grazing lands of Connaught are brought into tillage and food production. The example of industry and economy would spread, and the people would soon learn to utilise the wealth of the soil, which was hidden under the bullock's hoof, and to shake off the lethargy and laziness of the grazier's creation, which have left such a demoralising effect on the rural energy and labour of the country. Yet it would be well to correct the impression, even though the few might entertain it, that the purchasing of all the grass land by the Government for division would benefit the country. There is no necessity for the advocacy of that presently. There is more than ample land procurable, let on the hiring system, in the hands of the graziers, available for all the applicants, congested and other, for this generation. The class using these other grazing lands are the owners and occupiers, who in most cases have incomes from other sources. They graze stock and farm, not so much for the profit as for the interest and amusement it gives, and the occupation it demands ; besides, they usually employ a staff of labourers, and in many instances assist towards the improvement and the breeding of stock. Still, if they held land to an unreasonable extent, and injurious to a district, or if there was exceptional congestion in the vicinity, their places should be drawn upon, but to not more than a necessary limit ; otherwise their lands should not be interfered with, as local men of wealth are a source of income to the districts they reside in. In a measure their living in the country would cause a reaction and produce a harmony among all classes, and tend to obliterate the baneful effects of the past. With the division of the good grazing lands in the neighbourhood of large towns and the expansion of the industrious and rural population, work and wealth would spring forth and starvation and discontent would disappear. It may be observed everywhere through Ireland presently, and it is a noteworthy fact as showing the injury grazierism has wrought and is working on towns, that the worst business towns are those where grazierism is most rife and where the finest store cattle are fed. Take two examples—Templemore and Loughrea. The first-named town is in the centre of the finest plain of land that man could wish to look across ; yet, except on fair days, when it is packed with the best of store cattle for sale, the town wears the look of lifelessness and poverty, and the poor and the labouring classes appear stamped with the lines and furrows of insufficient feeding. Loughrea is another evidence of this extraordinary situation ; numbers and numbers of special trains of cattle and sheep

Oct. 1, 1907.

Mr. T. B. Hibbet.

leave its fairs each year, but enter the town the day after the fair, and one is struck with the almost ominous silence. There is neither trade, labour, nor traffic sufficient to cause a single echo along the stretch of street—neither mills, corn, nor vegetables to break the monotonous view of the silent rows of houses, although the surrounding country is unequalled for cultivation. It is a town, but not town-like, but, strange to say, it is camp-like, if police duty and police discipline resemble a camp. Small troops of the Constabulary walk or stand and watch within every dozen yards, and more closely in the neighbourhood of the Clanricarde rent offices, where, after the May and December fairs, the few small land holders and the big graziers deposit their rents to be forwarded to the Most Noble, who gives no return, and keeps his best lands locked up, caring nought for the Western old town which is fast tottering to its fall.

57880. CHAIRMAN.—Mr. Hibbet, you own 100 acres?—Yes.

57881. You graze that?—Yes.

57882 On your principle would it not be more advantageous to till it?—It is not all fit to till, my lord.

57883. Why should all these other lands be fit for tillage?—I was speaking of the change that is coming, my lord, of the coming era. I am as bad as the rest, probably.

57884. That is a good thing to understand. How about these 2,000 acres that you manage for your friend. Is he as bad as the rest, too?—Certainly. You are going to inquire into these things, and we are waiting for the change.

57885. Until the new era comes you think it is more profitable to keep the land under grass?—Certainly.

57886. Why don't you break it up?—Certainly it would be better, but from the bad example of the past we do not understand tillage. We are driven out of it. We are cramped.

57887. But you have got 2,000 acres under your control, and you own 100 acres yourself. Why, if it is more profitable to till that, don't you till it?—There is no labour in the country. The best men we ever had are gone to America, owing to the clearances and evictions in the past. We have nothing left now but the weeds and remnants of the country. If you plant the country with houses here and there, and the young men, as they grow up, are induced to stop at home, we will have plenty of labouring men by-and-bye.

57888. Mr. BRYCE.—If land was broken up and tilled as you propose, it would require capital, would it not?—Well, suppose the land is divided, and the tenant's son gets a division of land, probably his father would give him some money, as it costs from ten to twenty pounds to send each young man to America. For the remainder he might borrow from the bank or somewhere else.

57889. But it is dangerous, more or less, to get into debt. It would require a considerable amount of capital in permanent buildings to stall-feed the cattle in the way you propose, up to the stage of finishing, so that they may be ready for the English market. What amount of capital do you estimate for a forty-acre farm, equipping it with buildings and implements, and so on, so that the small farmer should be able to finish his cattle. What amount for that forty-acre farm do you think would be necessary in capital?—He would not want much. He would work his way along by degrees, and put up sheds, and so on.

57890. Still that requires some capital. What amount of capital do you think a farmer of thirty or forty acres would require to go on with, to treat his land in the way you propose?—Well, to commence with, about £150.

57891. CHAIRMAN.—Do you suggest that if all this land was broken up in this county, and the next county, it would be suitable for tillage?—I will just explain that I agree with neither Mr. Doran, on the one hand, nor Mr. Tener, on the other. Mr. Doran said some lands were too good to till in the County Meath.

57892. Do not go so far afield as County Meath. Take this county?—I neither agree with Mr. Doran, that some land was too good to till, or with Mr. Tener, that stiff land would be improper for cultivation. I would advocate the tillage of a field, with a soil of gold, if it would produce crops of wheat or corn.

57893. Without going into the question of the fields of gold—I suppose they are rare—on the fields of clay, which I suppose are more common, would you suggest tilling them?—Certainly I would.

57894. You do not agree with other witnesses who say that heavy clay is not suitable for tillage?—They would give good crops if properly tilled. I would also like to convey that where these heavy stiff clay lands are, it is for want of cultivation they are so stiff. If they were tilled they would be more porous.

57895. Have you any practical knowledge yourself of tillage?—A little.

57896. Your experience is that if you till land it makes it more easily handled?—It makes it better in every sense. In fact the land of all Ireland would want to be tilled. It would improve it.

57897. Then, there is no land in Ireland which you think is incapable of tillage?—Of course you could not till the rocks.

57898. Well, of course, I mean no soil?—Yes, no soil.

57899. Then, you say that there is more than ample land procurable, let on the hiring system, and in the hands of the graziers, available for all the applicants, congested or otherwise, in this generation?—In Galway.

57900. Where did you get your figures from?—Well, I would be wrong if I went into the question of so many holdings.

57901. Can you tell us, to begin with, how many acres of land there are available in Galway, let on the hiring system?—Well, I could not, but from observation.

57901A. Can you tell us how many applications there are from congests in Galway?—I have not the figures, but I apply my mind to those who are eligible for it.

57902. Do you know how many sons of tenants there are?—There are not many presently. They are gone away.

57903. Well, how many?—Do you want from each house?

57904. How many houses?—I could only say from observation.

57905. You must have studied Ireland pretty closely?—Well, I have looked about me and have formed my opinions from my close connection with my countrymen.

57906. You must have, when you can tell from looking about you how many applicants, sons of congests, and how many acres are available. You must have remarkable powers of observation?—Of course no man can do that without having a return of figures.

57907. And without figures how can you know them?—Not accurately. I am only giving evidence broadly, from top to bottom, but if you lay traps for me like that you can turn me any way.

57908. Pardon me; I am not trying to lay traps for you. I was only asking for information?—I have no more information on that particular point.

57909. Sir JOHN COLOMB.—Do I understand you to say that you yourself hold 100 acres in grass, and that you manage 2,000 acres?—Yes; I am stock manager for other parties.

57910. That 2,000 acres is, I suppose, mostly grazing?—All.

57911. You come to condemn a system which you are managing under yourself?—I am speaking for the benefit of the country, and not for any parties or individuals.

57912. Then the Commission is to take it that you are engaged in making your money and profit by managing a system which you condemn?—Certainly.

57913. Then you say that this system, which you represent as a manager, has changed the thrift and industry of the people to sloth and negligence?—Certainly.

57914. Therefore, as this is a grazing district, do you tell the Commission that the characteristic of the people of this district is sloth and negligence?—Yes.

57915. You make that general assertion with regard to the people of this district?—Yes, from the condition of things.

57916. You mean all classes of the district. You mean that the characteristic of the shopkeeper is

sloth and negligence?—Yes; except there might be individual cases.

57917. Then, you say this system produces weeds?—Yes.

57918. Do you wish the Commission to understand that on grazing land there are more weeds and less attention than on the tenanted land?—There are more weeds; far more.

57919. Then you speak about the hard bargains—that it produces the effect of people making hard bargains? Is it not the fact all the world over that people buying and selling and dealing in commodities each tries to make a hard bargain?—Yes.

57920. Then there is nothing peculiar about the grazier?—He has it more than any other class.

57921. Don't you know that shopkeepers sometimes make hard bargains?—Certainly; but that is conducted on a standard system.

57922. Therefore you are on all fours with the grazier you condemn. You answered Lord Dudley that the reason you do not till—as I understood you—was that you did not understand tillage enough?—I said we did not because we have not labour.

57923. Do you include yourself?—Yes.

57924. Then you proceed to give us—as if you did understand tillage—some figures and prices as to a farm of land worked on a tillage system, as compared with land worked by the grazier?—I spoke of a general system. It can be done.

57925. I select the page of your evidence where you take 100 acres and divide it into four holdings. Then you proceed to give us particulars of how one of these should be worked in tillage, and how it would pay to work it in tillage. Did you give us those figures with the feeling that you knew nothing about it?—I did not say I knew nothing about it.

57926. Let us test it. First of all, as to this process of fattening. What are the months in the year during which the process of fattening is carried out?—From November to April.

57927. That is five months. What will a beast consume in roots—turnips, say—in a month?—It will depend on the feeding she gets. If it is a rich feed, it will be less, and if it is lighter, more.

57928. The fattening of the beast would depend on the getting of sufficient food. I ask you, in the process of fattening, what quantity of turnips per month would you allow for a beast being fattened?—I would not allow it all turnips for fattening.

57929. It is a simple question. You have a beast in a stall fattening. What amount of turnips will it consume in a month?—I would not give it turnips. Turnips will not fatten a beast.

57930. I will take it another way. You take the produce of this farm off, two acres of oats, two acres of potatoes, and one acre of turnips, and you tell the Commission that that, along with hay, will fatten eight beasts?—Yes.

57931. You return two tons of oats, one ton of turnips, and seventeen tons of potatoes. On that you say you will fatten eight beasts. I want to know how much you will allow for each of these beasts?—Three stones of potatoes and meal, cooked with turnips, and a stone of hay each day.

57932. You put these figures forward, and I merely want a rough answer. What quantity of turnips will you give each beast during the five months you are fattening these eight beasts?—If you look at the end clearly you will see it is not turnips I use only. I said three stones of potatoes and meal, cooked with a stone of turnips and a stone of hay each day.

57933. That is thirty stone a month. I won't trouble you further. You give the figures, and the Commissioners can work them out for themselves. I only asked you could you tell roughly, to test your knowledge, and I won't pursue it further. I will only ask you on another point, which is the last I will take. You say, as giving practical illustration of the injury of the grazing system, that in these grazing districts you find the worst business towns? Do you admit that Ballinasloe is about the centre of a grazing system?—Not exactly.

57934. Well, grazing prevails largely around?—Yes.

57935. Do you consider that Ballinasloe is an example of the worst of business towns?—It is not a good business town. The evictions that took place beside it years ago destroyed the town. If you ask people what the market was before those evictions they will tell you it got ruined by them.

57936. How do you hold your grazing land? Are you a tenant?—I bought the most of it. *Oct.* 1, 1907.

57937. Then you are an owner of grazing land, and you are a grazier?—I am not a grazier. Mr. T. B. Tibbet.

57938. I understand that you bought 100 acres?—Eighty-five acres.

57939. But you use it as grazing?—Yes.

57940. Then you are the owner of that grazing land, and you are a grazier yourself?—I am not a grazier. I am not an eleven months' grazier.

57941. You own grazing land?—Yes.

57942. You make your money out of it by grazing it?—Yes.

57943. Therefore you are a grazier, and the land you have may become necessary to settle tenants. You are an example of a class that you say ought to be got rid of, as regards the eighty-five acres?—I am a tenant, and bought under the Act.

57944. You are an owner of grazing land, and grazing land, according to your principle, is required by the State to give to people and till it. Very well. That being so, do you think the Government ought to buy it at their own price, whether you lose by it or not?—That is very personal.

57945. But you must come to the personal. You have been condemning the grazier and the grazing system, and you advocate the compulsory purchase of grazing land, and I want to apply it personally to yourself, and I want to know what your view is as to what you think would be fair dealing with you if the Government bought the land?—Can they buy the land I have bought under the Act, or do you want to change the law?

57946. I ask you a very simple question. You represent the policy that grazing land should be taken from owners of grazing land?—Yes, large owners.

57947. And striped and split up?—Yes.

57948. You are an owner of grazing land, and I ask you now what do you think would be a fair way of arriving at what the Government should pay you?—My point is that the eleven months' grazing land—the land on hire, should be bought.

57949. Then every owner who grazes his own land is to be excluded from the operation of this policy?—Yes. You buy first the eleven months' grazing land. See what condition you are in then, and take the other lands if you want them.

57950. But Lord Dudley gives you plainly to understand that even if you take all the grass land in Galway, you have not got enough. Therefore yours must be taken?—But you have a long way to go from the big grazing ranches until you come to me. First take them up.

57951. Yes, but I am assuming—I am not merely assuming. I am taking it for granted—that the Commission is aware of the evidence that there is not enough grazing land to go round, and therefore whether graziers or owners work it, it is all wanted. I ask you what do you think would be a fair price for the Government to take your land at?—If you come to ask me my opinion of what ought to be given for land, I say the Commission should send independent men to go on the land and fix the price—men who know the land. That is not my opinion alone, but the general opinion.

57952. Then you would be quite satisfied to let any authority constituted in that way go on to the land and say, "We will give you so much"—it might be a great deal less than you know it is worth, and would you be satisfied to take that price?—I would have to be satisfied.

57953. But I ask you would you? Do you think it would be fair?—It may or may not be.

57954. Do you think it would be any more fair than for a man to go in and fix the price of the goods in your shop?—I would not give an opinion on it.

57955. Mr. O'Kelly.—When you condemn the grazing system, does it matter whether a man holds at eleven months or from year to year?—A year to year and eleven months are almost similar takes.

57956. Then you condemn the one and the other. It is the grazing system you condemn?—The difference is—a man has a tenancy in land or he has not.

57957. Yes, but the system is the same?—No, the system is not the same. A man hiring land does not care a hang about the land. All he cares about is to get as much out of it as he can. He has no other interest in the land.

Oct. 1, 1907.

Mr. T. B. Hibbet.

57958. The tenant does not employ any more labour than the eleven months' man?—The eleven months' man has no other interest in the land. He is only grazing it, and gets all he can out of it.

57959. About this 2,000 acres?—Well, I might not have anything to do with that land in six months time, or two hours time.

57960. Mr. Bryce.—You seem to be surprised at Sir John Colomb's suggestion that the Government might wish to buy you out?—No, not at all surprised; but I was surprised at him asking me what would be the value of the land—the official value of land which I have bought under the 1903 Act, and which I require for my family.

57961. You do not see any distinction as between yourself, as regards this eighty-five acres, and any other landlord?—Well, it is a small division compared with what is to be had.

57962. You think anything about eighty-five acres might be overlooked?—Well, I would say as much, and it would not be large when it came to the point of dividing it if the change were pushed so far.

57963. It is only a question of degree. If a man has 2,000 acres he ought to be bought out, but if he has only 100 acres he ought not?—Certainly, you cannot have uniformity.

Mr. Martin Finnerty examined.

Mr. Martin Finnerty.

57964. Chairman.—Where do you live?—About seven miles from Athenry.

57965. Are you a farmer?—Yes.

57966. What size is your farm?—About sixty acres.

57967. What sort of farm is it?—A grass and tillage farm. It is good land—fair enough land.

57968. Do you till it or not?—We till some of it.

57969. How much?—Sometimes four acres and sometimes three.

57970. Out of how many acres?—Sixty.

57971. And you only till three or four acres?—Yes.

57972. What do you do with the rest?—We graze with it.

57973. Do you breed your own cattle?—Yes; and rear calves, and sell them when they come up to two and three years old.

57974. Now, what do you want to tell us?—I am Secretary of the East Galway Executive of the United Irish League. I was also Secretary of the Dunsandle Estate Committee. While a great deal has been done by the Estates Commissioners in the district, thousands of tenants settled, and tens of thousands of untenanted lands purchased and distributed, still a great deal remains to be done, and I believe a proper settlement of the country cannot be effected without compulsory purchase. It is not reasonable to expect that tenants who are deprived of the benefits of the Land Act through the obstinacy and unreasonableness of their landlords can ever be satisfied until they too have purchased their holdings, and get their share of the untenanted land, and are placed in the same position as their more fortunate neighbours. I believe, therefore, that compulsory powers are necessary in dealing with landlords of the type of Lord Ashtown and Lord Clanricarde. The lot of the small farmers was never an enviable one, but still they struggled on from year's end to year's end, no matter how hard set, never knowing in times gone by that a better one was in store for them, the children's only ambition to keep the roof-tree over their aged parents, and the parents' ambition to rear up their children for the emigrant ship. But this is not the case with people now. They know their rights and are prepared to struggle for them. They also feel that their position can be improved. They feel that what was possible on the Dunsandle and other estates may be possible on theirs. As one who knows the country fairly well, I do say that feeling will run higher and higher until something is done to allay the terrible discontent prevailing at present. No proper settlement of a district can be made where a landlord stands out, here and there. Different estates in the same neighbourhood should be purchased and dealt with. At the same time, in order to do the work satisfactorily, where estates are being sold, the Commissioners should have the power to buy out an unreasonable landlord for the common good. The people are sorely in need of all the grazing lands of the country, but it is one thing to get the land, and another thing to get it at the proper value. In many cases, landlords who are even willing to sell, expect prices entirely too high for their grazing lands, because these lands have been set at competitive prices, which in some cases were enormous. These prices have, in most cases, been paid by rich shopkeepers and others who derived their incomes from other sources, and have wrought their own ruin, in many instances, by their dealings in the ranches of which they did not know the proper value. If, when the people get the lands, they do not get them at the proper value, the last state of affairs will be worse than the first. I think I have in my time done a man's part in the movement of the people for the land, and I yield to no man in my desire to see the land purchased and divided; but I would far prefer that it were never purchased than purchased too dear. If you give tenants land at its fair value, you lay the foundation of future prosperity and content. If, on the other hand, you give tenants land at excessive prices, you sow the seeds of further discontent and trouble. As far as I can gather, the Estates Commissioners have been, generally speaking, fairly successful in winning the confidence of the people, and the tenants are quite willing to leave the question of price and purchase in their hands. This is more than I can say for the Congested Districts Board Their transactions in this part of the country have not won the approval of the public or the tenants interested, but have bred suspicion and mistrust. However much the landlords may like them—and I believe, owing to the price, they have good reason to do so—the tenants in this neighbourhood will be very slow to have any dealings with them in future. This body purchased the Benmore Estate over the heads of the tenants, without consulting the latter as to price, paid the landlord three years' purchase more than the tenants offered the landlord, or ever intended to give, grazed the lands for three years in opposition to the wishes of the tenants. At last there was an end to the wrangle, and nobody seemed satisfied, except the landlord. I made an inspection of these holdings, and I have no hesitation in saying that the holdings on this property are entirely too dear, and that the tenants will find difficulty in meeting their engagements, and adverse times may very likely force them into bankruptcy, and if public rumour is correct, on the Kenny and Longworth Estates, prices are even higher than in Benmore. The people are anxious and willing to meet their engagements, and will strain every nerve to do so, but no Government or public authority should impose obligations on tenants which it is impossible to meet. The importance of this question of price cannot be over-estimated. The tenant should get fair value. The credit of the country and the future of the tenants is at stake, and the Government should be careful about the men in whose hands the purchasing of these lands is placed, as we cannot afford to have a repetition of Benmore. Now, let me turn to the O'Farrell-Doon Estate, purchased by the Estates Commissioners. Within six months the land was divided, the houses built, the tenants taken out of their wretched holdings in the congested village of Cahernagarry, and given good compact holdings, and decent houses on the untenanted lands. Their old holdings, which were in wretched bits and scraps, here and there, miles apart, were divided amongst the tenants who remained in Cahernagarry village, the old holdings there were resettled in such a way that it would be difficult to say whether the tenants who went out or those who remained got the greater benefit. It was a real pleasure to me to go amongst them and see the face of the country changed. Would that I could live to see that vast and desolate tract between Portumna and Ballinasloe with such houses, and the long and uninterrupted silence of these vast plains again broken by the sounds of busy men and women. If the whole face of the country there is to be transformed, one can only picture to himself what it would be like by paying a visit to the new village of Doon. The tenants expressed themselves thoroughly satisfied, and felt ex-

remely grateful for what has been done for them, and their hopes for a good future are high. This is the sort of work we want to have done in the country. I see no other means of keeping the best young men we have from the emigrant ship, except by providing them with new holdings, and while the necessity of making uneconomic holdings economic is a matter of very great urgency, it would be well that deserving sons of tenants should be also settled down in the land of their birth. I find here and there through the country vast acres of low-lying lands, very much in need of drainage. There are also large tracts of cutaway bog and mountain, at present almost valueless that should be planted. I believe both would more than repay the outlay, while at the same time giving employment, and helping to keep the people at home. I have also been asked to lay before this Commission a statement of facts and circumstances on behalf of the tenants on the Tyaquinn and Colmanstown Estates. Both these estates are adjoining the Dunsandle Estate, and both were purchased under the Ashbourne Act, the tenants having purchased the grass lands on the other. In Tyaquinn, a Mr. Richardson of Dublin divided all the grass lands amongst his three sons for the purpose of a purchase. In Colmanstowns, about 900 Irish acres have been purchased by the Smyth Brothers of Cootehill, Co. Cavan. All the lands in both cases are in the hands of absentee owners, who do not live there or expend any money in the locality. Mr. Richardson would be willing to sell, but declares himself unable to do so until special legislation is enacted to facilitate the sale and purchase of such lands as these, on which there is an annuity payable to the Irish Land Commission. The Smyth Brothers also hold 300 acres of grazing land at Dunmore, and also hold vast tracts in Co. Cavan. The tenants on the Colmanstown Estate are nearly all confined to patches of cutaway bog. On the Tyaquinn Estate the condition of the tenants there is even worse. There are other estates adjoining Colmanstown the tenants of which have no hope of an enlargement to their holdings except a division of the Colmanstown lands. I may state that, last though not least, if anything should lend importance to my evidence before this Commission, it ought to be the fact that I have been appointed by the tenantry of a noble lord, the last man, I believe, in Ireland to-day who would be entrusted to do justice to the fair fame of the Irish nation. I have been appointed by these tenants to lay before you a truthful and unvarnished report, not of the grievances from Ireland, but the grievances from Woodlawn. Recently he pretended he was prepared to sell, but as was stated to you at Loughrea, he called his tenants to meet him, only to trifle with them. He holds, outside his demesne lands, and in the vicinity of Woodlawn, 3,000 Irish acres of grazing land, and his demesne consists of about 1,000 acres more. Lord Ashtown boasted recently that these grazing lands were of ancient standing. I have been instructed to say that within the memory of men living at present there were 160 evictions on the property.

57975. Sir JOHN COLOMB.—When?—Within the memory of middle-aged men—men of about sixty years of age—who could give a list of the families evicted. This was given to me to contradict Lord Ashtown's boast that his grazing lands were of ancient standing. Later on there were seven evictions, of which six were recent evictions. In regard to the other squabble of Lord Ashtown and his graziers, we have nothing to say to any difference that may crop up between himself and the graziers that were deprived of their grazing lands. He has taken grazing land from them, but we do not quarrel with him in that respect at all. Of these 160 families that were driven from the Woodlawn property, they were taken in in the neighbourhood by Lord Clancarty. This estate was sold recently, and owing to these people having been taken on to it in former times there were no grazing lands left on the property for the enlargement of the tenants' miserable holdings. We hold that not alone should these vast ranches on Lord Ashtown's estate be acquired for his own tenants who are much in need of them, but we hold also that the tenantry on the adjoining estate of Lord Clancarty, who were thrown out, should get a portion of these 3,000 acres.

57976. CHAIRMAN.—Do you say these holdings on the Clancarty Estate are uneconomic?—Yes, most of them.

57977. What size are they?—From £7 to £8 valuation. The holdings are not sufficiently large even at £10 valuation, where the land is not good.

57978. They are not large enough to support a family?—They would not be regarded in any part of the country as sufficient to support a family, unless the tenant got help from America or England. On the estate of Lord Ashtown there are forty-seven tenants whose Poor Law valuation is less than £150. Thirty-eight of these are under £10 valuation, and seventeen whose valuation does not exceed £5. All these tenants' holdings are within the ambit of Lord Ashtown's game preserves, and they find it utterly impossible to protect their crops, which are yearly destroyed by his game.

57979. What sort of game?—Game of every description—rabbits and pheasants.

57980. Rabbits are not game?—Well, bog vermin.

57981. What sort of game?—Hares and pheasants.

57982. Hares and pheasants are things which the tenant can kill?—But they find it impossible. This game comes in at night. Suppose a man is watching his farm all day, he may chance to kill a few of them, but they come in at night and do the damage.

57983. I should have thought that an Irishman would not lack the power to kill rabbits if he wanted to. In England they can do it?—On the other hand, the people for other reasons have not got that spirit of independence about them, because they know the killing of his lordship's game would cause his anger. There would be other reasons also why they would not. However, the thing goes on, and their crops are destroyed. There are only fourteen families, any member of which gives his labour to Lord Ashtown. And these, with the exception of a few tradesmen, work for ten shillings a week. We mention this in order to contradict Lord Ashtown's statement that his tenants derive very great benefit on account of the great amount of labour he gives.

57984. How many do you say?—Fourteen. Out of forty-seven under £15 valuation we take what we consider uneconomic tenants, and only fourteen out of these get employment from Lord Ashtown.

57985. Sir JOHN COLOMB.—Let me just understand that. You do not deny that Lord Ashtown does largely employ the sons of tenants, but what you want the Commission to understand is that out of the families on uneconomic holdings, only the number you give out of these unwelcome holdings is employed by him?—Yes.

57986. But you do not deny Lord Ashtown's statement, generally, that the labour is found by tenants' sons?—No. Of course he employs others outside his tenants, but only fourteen of the forty-seven tenants who are holders of uneconomic holdings are employed. Of course the balance of the forty-seven tenants live, and have to live upon these little farms, the produce of which is destroyed yearly by game. It matters very little to them even if he employed them in still greater numbers, so long as they get no benefit from their labour.

57987. You say only fourteen of the sons of forty-seven holders of uneconomic holdings?—Yes.

57987A. How many sons of an age to labour are on these forty-seven uneconomic holdings?—I did not calculate that. I simply got that statement that only fourteen persons off these holdings were employed to work for Lord Ashtown.

57988. Are you prepared to say that there are twenty sons old enough to work out of the forty-seven holdings. I do not press you, but I only ask you?—I did not go into it.

57989. CHAIRMAN.—The holders themselves could work. It need not be their sons. I mean the small farmer who has got an uneconomic holding would have time to labour as well as looking after his holding?—Supposing a man was married and had a wife and family, don't you think he would have enough to do to work his little holding, and wouldn't he require to employ a man to work with him instead of giving his labour to Lord Ashtown?

57990. That is just the point. Does it take a man's whole labour to till one of these small farms, or has he got time to spend in labouring for somebody else?—In order to get fair farming out of what we would call an economic holding, that would cost, say, £500, a man would want to give not alone his whole time to it, but he would want to be a good man. He would want to use his scythe, and be able to lead a horse, and he would want another man sometimes.

Oct. 1, 1907.

Mr. Martin Finnerty.

57991. You do not understand. I do not want to know what would be the state of affairs when he had an economic holding. I want to know the state of affairs when he has only an uneconomic holding. Lord Ashtown's point was this, as I understand, that these small men were better off by having small holdings, and labouring on his estate as well, than they would be if they had economic holdings and did not labour. That was his point. Do you agree with that?—Well, it would be like tweedle-dum and tweedle-dee. A man cannot be the owner of an uneconomic holding and do that with any hope of improving his condition. He would be equally good by being a labourer altogether. He would be, in fact, no better off than a labourer. His position under Lord Ashtown would be very uncertain. He is one of those men that you might have labour from to-day and none to-morrow. Your position would be very insecure, when Lord Ashtown's gamekeeper can come along, and passing your door, can level his gun and shoot the poor cat at your door. I think myself I would prefer the poorhouse to such a condition of things as that.

57992. Is this your position—that although a man might be as well off if he had a small holding and laboured it, on the other hand, if he had a holding which might be considered an economic holding, his livelihood would be far more secure than it is under the present conditions. Is that your point?—Yes.

57993. The point that you made to Sir John Colomb just now is that out of the forty-seven uneconomic holders on this estate only fourteen were employed as labourers?—Yes. Just to show you how insecure their position is, these fourteen tenants who are in Lord Ashtown's employment at this wage of 10*s.* were ordered to pay up the hanging gale—every tenant owes a hanging gale, as you may be aware—or be instantly dismissed. By this and similar threats nearly all the tenants have had to pay the hanging gale during the first few years; and the result is that on Lord Ashtown's Estate the tenants owe no hanging gale. All the tenants are in fear and dread of him, and have to keep him paid to the last penny, because, in any case, if he found it possible, he might deprive them of their ownership. Seeing that he has been dismissing so many of the people who have been there in times gone by, the moment they begin to feel their position insecure, they never know the minute they may have to leave the place altogether. To help the tenants to pay rents his lordship, quite close to Woodlawn Mansion, has built a concrete wall across the principal river flowing through the estate, with the result that eight of the tenants' holdings, on account of the back-water, are constantly flooded, and rendered almost valueless. All the valuable posts in Woodlawn are filled by strangers, mostly English and Scotch men, the religious persuasions of those who held the positions a few years ago having, seemingly, interfered to the detriment of those who could not see their way to alter them. All the lands around Woodlawn are poisoned, and sometimes the people's swine and dogs and cats get poisoned. Where the domestic animals escape the poison they are sometimes shot by his gamekeepers. On this point I will give you an instance of how things are worked in Woodlawn. A gamekeeper was passing along by a tenant's house. There was a cat at the poor man's door. The gamekeeper shot at the cat, cut the tail off it, and put it in his pocket, and brought it home to show his skill with the gun.

57994. Who did this?—One of the gamekeepers.

57995. You heard Mr. Hibbet's evidence?—I did.

57996. Do you agree with him that all the land in this district is capable of cultivation?—I do.

57997. You do not think there is anything in the theory put forward by some people, that a certain amount of this land is too heavy to cultivate?—It is all nonsense. I do not say this heavy land is as good for tillage as some other qualities. There may be better land found for tillage, but I say you could not cut out a holding out of any of these places that would not be fairly suitable for tillage. Even if it was not the best for a certain thing, it would grow other crops. A farm may be very good for tillage, and yet there may be one or two crops which won't grow on it very well. In these times, when people have opportunity for spraying potatoes, I think, by attending properly to spraying, you can raise a fairly good crop of potatoes on almost any land. Then, on the other hand, you can, by fair attention, raise a good crop on almost any side around here. There may be a difference, you know.

57998. Is your opinion that all this land would be more profitable under tillage than it would be under grass?—Oh, yes; far more profitable.

57999. Then, if that is so, why do you not till a larger proportion of your own holding?—Well, my own land is particularly good for grazing. We have not all this land so very long.

58000. How long?—Thirty acres always, and we got thirty more when the lands were being divided for a brother of mine.

58001. So you have increased your holding by double. How much did you till of the original thirty acres?—About four, and sometimes five acres.

58002. That is more than you till of the sixty?—I think you do not understand me, sir. Generally the man with fifteen acres may till as much as the man with sixty acres, when the labour is not in the country.

58003. Is the labour not in the country?—Not in this particular locality that I am in.

58004. What are all those people—the balance of the forty-seven uneconomic holders on the Woodlawn estate—what are they doing?—They work their own land.

58005. But if it is a grievance that they do not work for Lord Ashtown, might they not be employed on some of the grass land that you have got, for instance?—I live seven miles away from them.

58006. But there must be others like you?—I made the point that they could not afford to go anywhere. What they want is to have their holdings made economic. In fact, when Lord Ashtown called his tenants up, including those who gave him their labour—and when he asked those who gave him their labour whether they preferred labour to purchase, they all, thinking that they were going to be instantly dismissed, told him directly that they wanted the land. They are employed to him at 10*s.* a week, but broken time brings it down to 7*s.* a week. No man would prefer a wage of that kind to an economic holding, or a fairly economic holding, leaving the question of independence out altogether.

58007. How does it happen that on the one side, as you tell us, there are a lot of young men who have nothing to do except to emigrate, and who therefore want land, and on the other side there is so little labour in the country that you cannot get men to till your land. How do you reconcile these two statements?—I do so this way. Suppose a man becomes a general labourer in these districts, he gets five people to ask him at one time or to seek his labour for a few months of the year, and gets no one to employ him during the remainder. He is idle during the winter months. No man could settle down in the country as a labouring man under those circumstances. Three months employment in the year at 10*s.* a week would not be sufficient inducement to a man to remain in the country and settle down and get married.

58008. Your reason why you do not till any more land is because you cannot get labour?—It is my intention to till more. I admit I am wrong in not tilling more.

58009. It does seem extraordinary while you hold such strong opinions. With regard to the value of tillage, you do not till more?—By making the holdings economic, a man who could not succeed in tilling very much of it would also live. There are other methods that could be employed in the management of these economic holdings that would enable him to live if he is a good man.

58010. Well, we do not want to labour that. Now, on the next point. Suppose a fair price was offered by the Estates Commissioners for these grass lands, who would you like to see placed upon them—what class of men?—Well, I would be of opinion that selections should be made locally. He should be a man able and willing to lead a horse, to be able to handle a scythe, to work a farm properly, to make a cock of hay properly so that it would not take the rain. It is only locally the selections ought to be made and then the men ought to have it at a fair price.

58011. I want to know for the moment who are the men you want to put on the land. Would you suggest that the first claim for that land would be the people who have not got economic holdings in the district?—Yes, they should be enlarged first.

58012. And when you have satisfied those people who would you give the balance of the land to?—Well, personally, I would not mind so much, but I think there would be a tendency to oppose the intrusion of outsiders.

58013. You would not like to see any migrants coming in?—Well, there is scarcely any room with the exception of the stretch of grazing country between Portumna and Ballinasloe. On the grazing land there is very little room for migrants after supplying local needs.

58014. What do you mean by supplying local needs?—I mean after enlarging the holdings.

58015. Do you mean to say that in this district where there is so much grass land, that in your opinion, after satisfying the needs of local uneconomic people, there would not be any balance left over?—Yes, that is my opinion. I saw on the Sandford-Hills estate, where they had only five or six acres left, after enlarging the small holders.

58016. Supposing there was some over, would you be opposed to the Estates Commissioners bringing in men from Connemara, for instance, and putting them there?—Personally, I would not, unless I knew they were men who knew how to work the land properly, and were experienced in working similar holdings. I would like to be satisfied they were men who were in the habit of working similar land. The man, say, who had spent part of his time fishing or other pursuits, such as men are employed at along the seaboard in Donegal, is not a suitable tenant to take and put into Connaught.

58017. There are a great many people there who do not have the opportunity of fishing?—Well, such a man might make a good tenant.

58018. Would you like to have some of these men?—Well, a tenant of that kind is very much handicapped coming into a strange place, and, in fact, I must say, that it would be much easier to help a man to get a start in the world on one of these uneconomic holdings who, while he is making that start, lives in a house in his locality, and is helped by his brothers to make a beginning on one of these new holdings. A man coming a long distance, especially into a hostile territory, will be very much handicapped.

58019. Hostile territory? One end of Galway is considered hostile territory to the people of the other end?—Precisely. I would not advocate the principle, but I would be afraid it would be by others.

58020. Will you tell me this. If it is to be regarded as hostile territory, tell me, in your opinion, how these unfortunate people, who have such very poor holdings in the west of Galway, are to be helped. Or perhaps you do not care about them much?—They have my sympathy certainly.

58021. If they have your sympathy, will you tell me how their holdings are to be enlarged, or how they are to be helped out of their present poverty, if this part of Galway is to be regarded as hostile territory?—Well, really something would have to be done.

58022. I know; but what would have to be done?—It is very difficult to say.

58023. Would you advocate the emigrant ship for them?—Certainly not.

58024. Well, if you do not advocate the emigrant ship, what do you suggest?—Well, there are men who have made a study of this. I have simply made a study of my own surroundings. I am not able to give an answer.

58025. If it was pointed out that the only possible way these poor people could be helped—really helped—was to take some of them out of the miserable conditions in which they live now, and put them down on the good land in East Galway, do you think the people in this district would be so selfish as to oppose their introduction?—Well, you would find a number of selfish people. I would not form that opinion of the people around here, but of course there are a number of selfish people everywhere you go.

58026. There are, of course, always; but do you think the Estates Commissioners would be prevented, or the Congested Districts Board would be prevented from carrying out a great policy of benefiting these poor people by selfish opponents?—What I mean is that, where you have, after enlarging the holdings, only a farm left here and there, say one or two holdings to be left for migrants, there is one man there already with five or six sons; four of them will have to go to America, and they have as good a claim as anyone.

58027. I know; but would that feeling be sufficient to prevent the Estates Commissioners or Congested Districts Board trying to relieve these poor people in the western areas by bringing them on to that land?—Well, really now, telling what I think, I could hardly say. In one district it may; in another it may not.

58028. These young men that you would like to give holdings to now in the locality—if they are given land, they will marry and have families. When their sons grow up, what is to happen in their case. There will not be land for them?—No, there will not be land for them.

58029. What will they have to do?—Well, the country, against that time, should be very much improved. Of course a large number of them may have to emigrate still; but we will have an improved state of things in the country. We will have made a great charge forward. When the land question is settled I think everyone who loves his country will advocate the starting of industries, to enable us to be a self-supporting nation, and to produce all for ourselves. By the time their sons will be reared I think we will have made very little progress if there are not more factories and other works than there are at present.

58030. But, at any rate, you realise that if these men are to be employed in the country, it will be at industries or something apart from the land?—I look at it in another way—that there should be greater openings for the people to get the land at a fair value. If not I am afraid there will be very little progress made.

58031. At any rate you do realise that this is only a temporary solution, and that if you give land to young men now, their sons will have to look for some other employment. You cannot go on indefinitely finding land for the sons of tenants, so that you are putting the young men of the present generation in a peculiar position, which their sons cannot possibly claim—you realise that?—I do; but I believe that the improved state of things in the country, and owing to the general prosperity of the country, there will be greater openings for young men. For instance, a farmer then might apprentice his son to a trade; and, with our shopkeepers prospering, and all classes prospering, there would be an opening for that tradesman when he acquired that trade and a prospect of getting employment in our small towns, where the townspeople now have not sufficient money to support him. But it might be different in twenty years' time, when things have improved.

58032. This demand for breaking up the grass lands is generally justified, is it not, on account of the poverty of the uneconomic holdings?—Yes.

58033. You hear of people saying that the grass lands should be divided up, in order that the uneconomic people should be given larger holdings?—Everyone who takes a fair view of things must agree to that.

58034. That is the great argument. Don't you think that is rather a dishonest argument?—I do not.

58035. As a matter of fact, you do not want to do that. You do not want to break up the grass lands in order to give land to uneconomic people. You want to break up the grass lands for people who have no land at all?—I would give it to uneconomic people first, and then to young people—local people. You cannot enlarge all.

58036. Don't you think it is unfair to advocate the breaking up of grass lands in Galway for the purpose of enlarging the uneconomic holdings in Galway, when a great many of the uneconomic holders in West Galway are not to be given any enlargement?—Personally I would not be for drawing any line.

58037. Would you be prepared to do this? Would you be prepared to say that the poor people who have economic holdings, no matter where they are to be found, in East Galway or West Galway, or anywhere else, must be attended to first, and after that, if there is any land left, then you would be for giving it to the deserving sons of tenants? Would you be prepared to put all the small holders and the poor uneconomic holders before the claims of men who have not got any land at all?—Oh yes; all the uneconomic small holders.

Oct. 1, 1907.

Mr. Martin Finnerty.

58038. You would be prepared to say that?—I would.

58039. And therefore you would be prepared to resist any tendency to shut out uneconomic holders anywhere they are to be found? You would not condemn these poor people in West Galway to live for ever in their wretched holdings?—I would not condemn them, but it is very hard to condemn the man who would condemn them, supposing he has an interest in it.

58040. That is rather a weak position to take up, isn't it?—I don't think so.

58040A. You said that compulsion was absolutely necessary?—Yes.

58041. Suppose there was compulsory purchase. What price do you think should be given? Do you think a man's land ought to be taken, wherever it is, by compulsion, and that he should be left in a worse position financially than he was before? Would that be fair?—I think the land should be acquired for the tenants at a fair price, whether the landlord is left in a worse position financially or not. I think that the landlord should realise that that day is coming, and the sooner they do it the better for themselves.

58042. Isn't it a question of purchase—a question of bargaining?—Yes.

58043. Are not you inclined rather to look only on one side of the bargain?—You should get the land at a fair price.

58044. Do you think it is fair that the Government should go to a man who happens to have his property in land and say to him: "We will compel you to sell your land whether you like it or not, and we will compel you by that process to lose £400 or £500 a year"?—The people are there, and the situation is this. The people say they must get the land. Of course the landlord there is in the position that this state of things cannot be changed, and to give the land at a fair price the landlord would have to bear a certain loss.

58045. Suppose there was a war, and that horses were wanted to mount cavalry, and you had a farm and young horses, do you think it would be fair for the Government to say to you: "For the purpose of our war, to mount cavalry we will have to take some of your horses compulsorily, and we will take them and give you ten shillings or a pound a-piece"; do you think that would be fair?—Well, I think myself that the land can be secured at a fair price without the landlord suffering loss.

58046. That is a further point that can be dealt with afterwards. I want to know what you would be prepared to do as far as the landlord is concerned: supposing that the Government came to you and said: "We want your horses for the purposes of the country as a whole, and we are going to take your horse and pay you ten shillings for it." Would that be fair to you?—I think it would be hardly fair.

58047. Then why is it fair for the Government to go to a man whose property is in land and say: "We will take your land and pay you, not the real value, but the value to us"?—But, on the other hand, it is unfair not only to the tenant, but to the country, to see the landlords walking away with more than their net income.

58048. But this is a fair price he is getting; not more than he ought to get, or more than he had before. I am not suggesting that he should get more than he had; I am suggesting that it may be unfair to leave him with less than he had?—By getting a fair price for the land he would not be left with less than he had before. A fair price can be arrived at by making a proper calculation.

58049. In your opinion it would not be fair to leave him with less than he had before?—I would not go the length of saying that it would.

58050. How is it to be done without injustice?—Well, you have to calculate it according to the number of years' purchase that would bring him a fair income.

58051. Well, now, will you tell us a little about this Benmore Estate: what happened on the Benmore Estate?—The holdings are entirely too dear; I made an inspection of them, and they are entirely too dear.

58052. Who bought the Benmore Estate?—The Congested Districts Board.

58053. Did they buy with the approval of the tenants?—Decidedly not.

58054. Did not the tenants wish the estate to be sold to the Congested Districts Board?—No, the tenants were bargaining direct with the landlord, and they offered him a certain number of years' purchase; the landlord wanted a certain number of years' purchase, and the difference between them was three years. Without consulting the tenants the Board gave the landlord his figure, that was three years more on the agricultural holdings alone than the tenants were prepared to give themselves. It is to be seen by any person that not alone did they give this price on agricultural holdings, but on grazing lands also, an exorbitant price was paid. Accoording to what I can see, there is mismanagement in the dividing of the lands. In one case a man has to pay £23 for what would be only worth little more than half that for the enlargement of an uneconomic holding. I would not regard it as a suitable holding for a man to live on at any price.

58055. Was that estate a very poor one, with a lot of small holdings—uneconomic holdings?—There were a number of uneconomic holdings, but not a great lot; there was room for new buildings.

58056. But it was a poor estate?—There was a number of uneconomic holdings.

58057. Did the Board improve some of the holdings?—After a fight with the Board on the part of the local people they did, but only after a fight. They held the land for years, and grazed it in opposition to these people.

58058. Did the Board re-stripe holdings and increase them?—They have increased them, but they increased the cost to the tenants; they are charged nearly £2 an acre for land not worth much more than half that price; they are 30 per cent. too dear.

58059. The difference, you say, was three years' purchase between the tenants and the landlord. After the Board spent money and improved that estate the difference was made up; the annuities the tenants were paying were based on improved holdings rather than on unimproved holdings?—The landlord got the extra three years' purchase, and they improved the holdings at the tenants' expense.

58060. Is that to your knowledge?—I understood they did.

58061. If the estate originally had been in the same condition as that which resulted to the tenants, after being improved by the Board, would not the tenants have been willing to give an extra three years?—They did not improve the home holdings of the tenants, on which the three years' purchase has to be paid; there is no improvement on the home holdings.

58062. How do you mean home holdings?—I mean the holdings on which they lived. This is an estate where I complain the prices are too high on the grazing farms.

58063. On the tenanted portion you don't object to the annuities—they were fair?—Of course they would not be so extravagant, but three years' purchase over and above is dear. It doesn't matter how it was mismanaged so long as the tenants have to pay too much for the divided untenanted land.

58064. Sir JOHN COLOMB.—You gave some information to the Commission about uneconomic holdings on the Ashtown Estate, and told us that the wages Lord Ashtown paid for agricultural labour was 7*s.* a week?—That is taking the broken time into account. He pays 10*s.*, with the exception of a few, but taking into account broken time and holidays, it would average about 7*s.*, I am told.

58065. Do you know that of your own knowledge?—I take the tenants' statements.

58066. Lord Ashtown has handed in,* and it will be printed and published, a statement with regard to employment of labour on his estate, and I can find in it nothing to justify your statement that he only pays 7*s.* a week. Am I to take it that you are giving information as to what you have heard, not what you know yourself?—I believe it. There were several here yesterday to corroborate my statements; several tenants came to corroborate my statements.

58067. Are we to take it as your statement of what you believe to be true, because you heard it from other people. Do you know of your own knowledge that he only pays 7*s.* a week?—I agree that he pays 10*s.*, but a man will be very successful if he earns a full week.

58068. That is if a man doesn't go to work he doesn't get paid?—Yes, in wet, broken weather, I suppose.

* See p. 285, Table B.

58069. You don't think evicted tenants have any claim before uneconomic holders?—I do; I put evicted tenants first, and I put Plan-of-Campaign evicted tenants, who went out on principle, first.

58070. Was not there an estate called the Woodford Estate?—Yes.

58071. Was there a scheme to bring in evicted tenants there?—Yes.

58072. Were they strangers, the evicted tenants to be brought in—were they from another part of the country?—It is from the Clanricarde Estate the evicted tenants were evicted, and, so far as I know, I am not aware of opposition; I am not aware of the tenants having any opposition to fear in any quarter they are sent to.

58073. On the Woodford Estate was there a proposal to fix up evicted tenants?—I am not aware.

58074. You don't know anything about it?—Do you mean Lord Ashtown's Woodlawn Estate?

58075. I mean the Woodford Estate?—I am not aware. The tenants sought to get back to their holdings, and they would be glad to get back, but I understand Lord Clanricarde refused to allow them back.

58076. Then you know nothing about Woodford Estate?—I know there are evicted tenants there.

58077. There is no difficulty about their settlement?—There must be some—there must be very much difficulty; they are out yet.

58078. Do you know about the Woodford Estate?—Yes; I know the Woodford Estate belongs to Lord Clanricarde.

58079. Was there a proposal to settle evicted tenants on the Woodford Estate?—Yes.

58080. Were there objections by the people on the Woodford Estate to their coming there?—Yes, by the planters, I suppose.

58081. And in that case local opposition, local feeling, was against bringing men in, although they were evicted tenants?—Yes, amongst the planters of course.

58082. And now, to see that I thoroughly understand your view with reference to Lord Dudley's question, you agree that uneconomic holdings are to be enlarged first; he put you a question as to the balance of the land, and you said you thought there would be some objection to migrants from Connemara coming to the balance of the land?—Yes; but I may be right and I may be wrong.

58083. Would that objection be from the farmers' sons in the locality who wanted land themselves?—Very naturally.

58084. Do you think farmers' sons in the locality would be hostile to Connemara tenants coming in unless the farmers' sons were satisfied?—The feeling would be in the locality that farmers' sons should be first.

58085. In the case of migrants from Connemara, with farmers' sons' unallocated land, the feeling would not be one of warm welcome to the migrants from Connemara?—To say the very least, it would not be a warm welcome.

58086. What estate do you live on yourself?—The Dunsandle Estate.

58087. Is that near the Woodford Estate?—No; it is far from it.

58088. There was no difficulty on the Dunsandle estate?—The arrangement was to have it divided; there was no difficulty; the arrangements were carried out according to arrangements between the tenants and the landlord.

58089. Mr. KAVANAGH.—What position would you take up yourself supposing migrants were to be brought into these lands?—I would not be for drawing the boundary anywhere.

58090. You would welcome yourself migrants from any part of Galway?—I would not go to the extent of saying I would welcome them, but I would not be for drawing lines.

58091. Would you assist in making them welcome there—would you assist to make local opinion welcome them?—Provided they did not come in numbers so great, and that the needs of the people locally were fairly satisfied.

58092. The tenants of uneconomic holdings?—Yes.

58093. If they were first satisfied would you be in favour, and would you assist local opinion in favour of other migrants coming to the locality?—So far as would be reasonable.

58094. What do you call reasonable?—Suppose that the needs locally were fairly attended to—but there is this difficulty, that the Congested Districts Board where they come and buy, have an objection, and I believe they find some difficulty according to law in providing for local people, and it was after a stiff fight any local people were provided for in Benmore, and the price went so high that it made the whole thing ridiculous.

58095. The Congested Districts Board cannot enlarge holdings of over £5 valuation?—That is the difficulty.

58096. You consider that too low?—Far too low. It is a great hardship on the people who are holders of uneconomic holdings that their cases are made different from their neighbours'—their neighbours whose property was bought by the Estates Commissioners, who had the advantage of getting their holdings made economic—and that that amount of land is kept for men who have economic holdings.

58097. Sir JOHN COLOMB.—Was there ever a proposal to bring evicted tenants from another estate to the Dunsandle Estate?—No; never.

58098. Was there any question of appropriating land to evicted tenants on that estate?—No; never.

58099. Nor on the Woodford Estate?—The Woodford Estate is far away; it is not sold at all; it is in the hands of Lord Clanricarde.

58100. Mr. BRYCE.—Suppose the Congested Districts Board got over the difficulty that hampers them from enlarging uneconomic holdings to the extent which it is desirable they should; supposing the £5 limit be removed, and they were able to satisfy local claims as regards uneconomic holdings, would you consider it reasonable that they should straightaway migrate from poor districts in the West?—I would not be for having them. They have lost the confidence of the people in regard to their transactions here. The price they pay is exorbitant.

58101. There are circumstances which are not understood here with regard to the purchase of these estates. Some in South Galway, where we have had evidence, they were bought because they were part of a bargain with regard to the purchase of lands in other parts of the country; they were bought because they could not buy the other estates in the other parts of the country without buying these estates in South Galway, and they had to pay a larger price than if they were buying separately—that is the fact?—Yes.

58102. The evidence from other parts of the country, not, as you say, on the part of landlords only, but of everybody, is that they have done business well in other parts of the country. They have not worked much in South Galway, but they have worked largely in Mayo and other counties, and the satisfaction in these counties is just as great with them as it is here with the Estates Commissioners?—Very likely in these districts the people are not judges of the land.

58103. I think they are quite able to judge the land; I do not think there is a monopoly of that knowledge here?—That would be the opinion I formed. There is a great greed for land in Mayo, where people are confined to an acre or two, and herd their cows on the road-side; they don't know the value of land, and they appreciate the worth of the Board more than people who know it.

58104. There is no doubt that in poor parts of the country there is great competition for the holdings; but at the same time you have got a pretty good notion of the value of land everywhere in Ireland, and knowledge of that kind is not confined to this part of the country. But the point is, you said you had sympathy with the poor holders everywhere in Ireland, not merely confined to the poor holders here, and I want to get at this, whether it is the Estates Commissioners or the Congested Districts Board—you would rather see the Estates Commisioners?—Yes.

58105. But whichever Board it is, don't you think that the claims of uneconomic holders in any part of Ireland should be considered before the claims of anyone else?—I would not go in for drawing the line very much.

58106. You entirely agree with the view expressed by members of the Commission on that point, and I gather from your answers to Mr. Kavanagh that you would be prepared provided the action of the Estates Commissioners or of the Board was reasonable—you would be prepared to get over the hostility which you say exists in the minds of some people to migrants from other parts—you

Oct. 1, 1907.
Mr. Martin Finnerty.

would exercise your influence to get over that?—Yes, so far as their action is reasonable.

58107. What is reasonable; I must press you about that; what would you consider unreasonable?—I would consider that at best there is no room for them except in small numbers—one or two.

58108. I am supposing that there is room. So long as there is room would you consider that they ought to have it first, and be satisfied before the sons of tenants, or before the claims of the sons of tenants were entertained—that's the point?—I think I would.

58109. And you would do your best to get over the feeling to the contrary?—I think I would.

Mr. Leslie Edmonds re-examined.*

Mr. Leslie Edmonds

58110. Chairman.—You are the Land Inspector of the Congested Districts Board in this locality?—Yes, acting under general instructions.

58111. You have heard the evidence given at the various places?—Yes.

58112. And you would wish to make some remarks with reference to the evidence?—Yes; there is a misapprehension in some of the statements made. First of all, take the instance of Benmore. That estate was bought as part of a bargain, as you have said. The landlord refused to sell the estate in Mayo unless we bought his Galway estate. The Board did so. They sold that estate for exactly the same as they paid for for it, and the money spent was from the Board's own funds. The estate was taken possession of in May of 1904. We started to make use of the farms at once, and encountered opposition offered by the tenants to grazing being put on, which, under the rules still existent, prevented us from dealing with the estate at once. They would not get priority of treatment owing to that. But when I met the tenants I told them that every tenant on the estate—and there were only two under £5—would be enlarged to £25, and the remainder of the land would be used for migrants. This was vehemently opposed, and the result was that the estate remained a long time, and nothing was done, and finally a certain class of tenants were promised holdings.

58113. Benmore is a scheduled area?—No.

58114. Under the law as it stands, if the Congested Districts Board buys grass land outside a scheduled area, it can only do so for the benefit of a poor estate in a scheduled area?—But it does not apply to the Board's own tenants. Benmore is the only case in South Galway, except three tenants on Dr. Kenny's estate, that we have acquired tenanted land for. The reason that a great deal of blame attached to the Board in South Galway for its very slow work is that it is impossible to carry on migration unless you have certain conditions, and one of them is that you must have control of the estate or area from which you migrate tenants. Failing that, if it is in the hands of the landlord, as where the Board did migrate from Derrybrown, which is a very poor congested estate, held in rundale, belonging to Lord Clanricarde, in order to get these people the full benefit of their occupying interest one had to get cash fines from their neighbours, which is an unsatisfactory way of dealing with it, and then to amalgamate the holdings, and get the landlord to do so.

58115. The point is this, that although there may have been one or two attempts, by hook or by crook, to move men from an estate which had not been sold, speaking generally, as a matter of practice, the Board found itself unable to move migrants unless it had in its possession the estate on which the evil exists as well as the estate where the remedy exists?—That is exactly the case, and that in other parts we have had, but here we have not.

58116. The delay in South Galway is to a certain extent to be attributed to the fact that when you have purchased grass lands you have not had control and possession of tenanted slum estates in other parts from which to remove people?—Yes, and the other evil is the fact that in conjunction with that you have the local needs to satisfy. In Oatfield there are tenant purchasers, and the Board has no power to enlarge a tenant purchaser over £5, and the surrounding farmers, whether large or small, are all expecting to get land.

58117. It is necessary for the Board, if it wishes to carry out a policy of migration, to obtain land in as near proximity to the tenanted land from which it proposes to move people as possible?—That would be desirable, but not essential. If you had control at both ends it would not matter. A distance between certain points of twenty miles or so would not matter very much.

Rev. Thomas J. Reidy examined.

Rev. Thomas J. Reidy.

58118. Chairman.—You have some information to give us, Father Reidy?—Yes. I wish to give you a few facts, which will disclose as unsatisfactory a condition of things as can be found in the Western province. I might say our plight is unique; it is a case of starvation in the midst of plenty.

58119. Where is your district?—No. 2 Rural District of Roscommon, quite adjacant to Ballinasloe, within five English miles of Ballinasloe, the extreme south of Co. Roscommon.

58120. Mr. Bryce.—Is it south of Ballinasloe?—South-east of Ballinasloe, lying on the Suck and the Shannon.

58121. Towards Shannon Bridge?—Yes, and north of that. There are two or three things I want to point out. Few districts in Connaught present such an appalling contrast of wealth and poverty as the district of Moore, in County Roscommon, and without legislation of a compulsory character, and that, too, of no milk and water type, the present congestion cannot be remedied. I have had communications with large land holders in the district, which will, I hope, conveniently prove this statement. I also wish to say that the Congested Districts Board, as at present equipped, seems unequal to the task of doing hardly anything for us. I should like to add incidentally that my sympathies are very much with the Congested Districts Board, because they have done a great deal for me elsewhere, and I recognise the amount of good done by it in Connaught; but I wish to show you that in the southern part of Roscommon, in this special district where I am, which contains the only congested district in South Roscommon, we have great reason to complain—we are overlooked and neglected. As to the first point, the parish contains about 400 families. There is one electoral division scheduled as congested. It is, I think, the only congested district in South Roscommon. The other divisions of the parish should be scheduled, and would, were it not for the many grass farms scattered through them. There are 106 tenants under £5 valuation and 190 between £5 and £10 valuation. Some of the tenants pay a rent of £2 5*s*, some pay £1 5*s*., and there are others who pay nothing, and I think they are not asked for anything. Nearly all these people are living among the sandhills and flats, which were once expansions of the Shannon. There are three gentlemen who own more acres of land in the parish than are occupied by the 400 tenants. One of these, Mr. Mather, who has six or seven farms where he has his home in Scotland, has several large farms, almost all of them in my parish, comprising over 3,163 acres, and along with these he grazes about 1,600 acres beyond the Suck, only five or six miles from the series of ranches that are in my parish, extending from Ballinasloe to the banks of the Shannon. He lives a couple of months in a small farm house on one of the farms, but for the most part he lives in Scotland. These farms are Cappantogher, 179 acres, valuation, £50; Coolderry, 228 acres, valuation, £81 5*s*.; Coulderry again, 140 acres; valuation, £46 15*s*; Rathpeak, 550 acres, valuation, £178 10*s*.; Hill's End, 71 acres, valuation, £28 10*s*.; Failte, 548 acres, valuation, £257 12*s*.; Cloonburren, 864 acres, valuation, £353 10*s*.; another place, about 80 acres; Cloonabrack, 81 acres, valuation, £42;

* For former examination, see p. 18.

and at another place, called America because I think people were driven to America a few years ago from it. Here there are 290 acres, and the valuation is £76 5s.; Rooty, 132 acres, valuation, £66. Total, 3,163 acres. I wrote to this gentleman some time ago. (He has only seventeen tenants among all these farms, and the average valuation is only a shade over £5. I have their rental here, to put in if necessary.) I asked him to sell a section of these ranches to the Congested Districts Board or to the Estates Commissioners—anyhow to sell it. He writes back to me—I think I may read it, it is not marked private, I have had to read it for the tenants already. He says: "In regard to the other question of the land, I hardly know what answer to give you"—I am not surprised at that—"I am afraid that in trying to remedy one wrong I might be incurring another, because, if we were breaking up Rathpeak and Coulderry, we would have to dismiss some of the men there." He employs only twenty-two or twenty-three labourers at 9s. a week. The letter continues: "However, nothing can be done, I presume, this year, as the place is fully stocked just now and the crops are down. I may say that it would be a difficult problem to arrive at the value of an estate like Rathpeak and Coulderry, as we have laid out thousands in improvements, and we have both the landlord's interest and the tenants' rights to be compensated for. If my own tenants were coming individually to me and stating exactly what they want I might try to arrange some way of enlarging their holdings, but none of them have even hinted such a thing to me, though I have no doubt they have been talking to you on the subject." Further correspondence passed, and I have his last letter, which is not even as encouraging as that. He says: "In regard to the other part of your letter I cannot give you a definite answer. It is a large and vital question. It would disarrange all our plans. The working of all those places now in connection with the various farms we hold in this country that are so dovetailed in the management into one another would cause us considerable loss to so rearrange matters, and would take a long time. But this is too wide a question to bother you with." That's the way he gets out of it. I should mention with regard to this gentleman that the farms he holds are, I understand, held in fee, they were once old demesnes, but for the most part occupied by tenants, who were evicted under circumstances of exceptional cruelty sixty or seventy years ago. In this parish there were 800 families sixty or seventy years ago; now there are about 400. Between these farms there are seventeen tenants, with an average valuation of only over £5. I pass now to another gentleman. He is Mr. Potts, of Correen. He has seven farms in the parish and six outside of it. I also wrote to this gentleman to see if I could get him to do something, and I shall give you his reply. In the parish he has—Correen demesne, 300 acres; Kilbegley, about 200; Culliaghmore, 180; Culliaghbeg, 80; Cloonfad, 50; Raherabeg, 50; Creggan, 90. All these are occupied by himself, except Kilbegley. They total nearly 1,000 acres. Outside, he has in Moate, County Westmeath, 160; Drum, County Roscommon, 200; Scregg, County Roscommon, 400; Belfield, County Roscommon, 300; Cloonascragh, County Galway, 200; Clooncannon, County Galway, 500. Those total 1,760 acres, and most of them are in his own possession. Altogether he owns about 2,810 acres. I wrote a polite letter to this gentleman; and he wrote me a very brief one, which I should like to put in evidence. He said: "As far as I can gather from your letter, *re* the tenants on the townlands round here"—I wrote to ask if he would sell to the tenants, and added that it would be absurd for us to buy except through the Congested Districts Board, as the tenants were very poor, unless he threw in some of the outlying farms—he says, "I have no intention of selling any lands that I farm myself. If all the tenants agree to buy their present holdings, with a certain amount of turbary, I will then go into the matter, and let you know my terms of sale." That reply stopped the arrangements. This gentleman's tenants are very poor. He has sixty tenants, and of these twenty-four pay under £5 in rent. In thirteen cases out of the twenty-four, the valuation is under £5. Of the above there are eleven who pay from £1 to £3 in rent, and there are five who pay no rent, so miserable are their little places. They live along the banks of the Suck some of them. He, Mr. Potts, tills from sixteen to twenty acres, and employs about from twenty-five to thirty labourers at an average wage of 7s. or 8s. a week. Now I respectfully submit that these replies from Mr. Mathers and Mr. Potts go to prove that without a very severe measure of compulsion you cannot get land from such men—for, to use a horsy phrase, "they have stuck their feet into the ground."

58122. Sir JOHN COLOMB.—I understand about compulsion, but I don't understand very severe compulsion. What do you mean by very severe compulsion?—I mean compulsion that will give absolute power to the Estates Commissioners, the Congested Districts Board, or whatever Board may survive this Commission—that will give absolute power to deal with men of that kind. It is my opinion that it is criminal to allow Mr. Mathers, in the present condition of things in Connaught, to occupy such an enormous amount of land. He has six or seven farms. I have it on the best authority, in Scotland, and he seems to have a mania for acquiring farms. My view is that any legislation that will not deal with men of that sort and prevent this huge amalgamation, will not settle the unrest in the country. The breaking up of those large ranches is absolutely necessary. Secondly, our lands, which are low-lying and in places only ten or fifteen feet above the Shannon, require arterial drainage, and new roads to be made to make them accessible. As to the third point. In connection with the Congested Districts Board, I should be sorry to say a word against them. They have done a great deal of good, but we have reason to be dissatisfied with them in this district. It may not be the fault of the Board. They are crippled for some reason; I suppose they have not the money. I arranged for the tenants to purchase on the Lowe Estate and the Kyle Estate, which is altogether a congested district, and I thought when the terms of purchase were settled—one was eighteen years' purchase on first-term rents and on the other nineteen years' purchase—when I thought it was settled, and asked them to take over the estates, they said they could purchase no land. I had caused to be offered for sale to them the Maberly Estate, with six tenants—one holding 800 acres, who is a year-to-year tenant. He cultivates——

58123. Sir JOHN COLOMB.—Is that Mr. Harty?—Yes; he cultivates a comparatively small quantity; sets part in conacre, and takes in grazing cattle. I opened communications at the request of the people with the agent, and his representative came to see me; the result was that they offered the estate for sale to the Congested Districts Board; and, curiously enough, the Board shelved the purchase of the estate. We have to complain about that. That is practically all I have to say, except that the Board should take up these lands at once. I could have gone to the Estates Commissioners, but I had more experience of the Congested Districts Board. They take a good deal of pains, and I had little or no experience of the others. But now I shall have to fall back on the Estates Commissioners, though it is probable they may not deal with the congested district for me. The Congested Districts Board, I understand, got a large amount of money recently from the Treasury——

58124. CHAIRMAN.—You know that pending the report of this Commission the Congested Districts Board are not in a position to spend money on the acquisition of estates?—I understand they got a certain sum of money, which they have resolved to spend in Roscommon.

58125. CHAIRMAN.—I don't know where they got it?—They have got it, I learned, from a member of the Board; I am told they are authorised to purchase grass lands in County Roscommon, but not elsewhere.

58126. CHAIRMAN.—I believe that is so?—I have a letter from the Secretary to that effect. I am in the County Roscommon, and yet they won't purchase these grass lands. There are 800 acres of grass lands on the Maberly Estate—I have gone to considerable trouble to get these lands offered to the Board; and it is too bad that the Board cannot avail of this splendid opportunity, because of insufficient funds. We don't object to Mr. Harty living in the

Oct. 1, 1907.

Rev. Thomas J. Reidy.

house with a suitable share of this land; and the Congested Districts Board or the Estates Commissioners will deal fairly with him, and recognise his claim for consideration. I am anxious to get the Congested Districts Board in for the reason that the rundale system obtains very much in this district. It is an unfortunate system—the people cannot get along well while it exists. I want arterial drains for the bogs and low-lying lands; and I would also suggest that the Congested Districts Board ought to acquire the abandoned fortress at Shannon Bridge for some industry.

58127. Mr. BRYCE.—In reference to the drainage question, a great deal of money has been spent on the Suck already?—I believe there was in years gone by. I am not there very long.

58128. I understand a large amount of that expenditure was unproductive, that it cost something like £200,000, that a grant was given by the Government of £50,000, and that the tenants and landlords are objecting to pay any further, and say that the expense of the assessment made on them for the purpose of obtaining the drainage, compared with the cost and sinking fund and interest, is preventing the transfer of the land. Under those circumstances do you think it likely that the Government, finding it very difficult to get the assessment agreed on, paid, that it will spend more money?—I am certain there is no objection to pay whatever was assessed in the district. I have never heard of any objection being raised. Whatever drainage was effected could be of very little use to us. The Suck is near the Shannon, and you cannot drain it any lower, as the larger river is not sunk. The drainage I want would be arterial drainage, leading towards the Shannon and Suck from the swampy slopes to the North and West of these rivers.

58129. But through the Suck?—No, into the Shannon from the West—into the Suck from the North. You will require to go through the country to see what is to be done.

58130. Are the congested people in your parish in a very bad way?—Well, from the fact that there are 106 under £5 valuation, you can well infer how poor they must necessarily be.

58131. Are they much in debt?—I don't think they are; they are hard-working and thrifty. In conclusion the witness said he was sure the Commissioners would see that these landlords to whom I referred were an impossible kind of people—to use a mild word—and if the legislation of the future be not of the most sweeping character, he failed to see how the Congested Districts Board or Estates Commissioners could acquire land for the relief of the appalling congestion side by side with these huge ranches. Although the most peaceable people might be disposed to protest more than vehemently against these injustices, yet they were of the most peaceable and law-abiding character—there not being a police barrack in the whole district. Some people, perhaps, might be disposed to think that this fact was scarcely to their credit.

Mr. THOMAS REILLY examined.

Mr. Thomas Reilly.

58132. Sir JOHN COLOMB.—Where do you reside?—At Lismakeague, Kiltormer. I want to give a short statement of some estates in the parish I live in to show the necessity of giving land to those who require it. The first is the Quansbury Estate of Lord Clonbrock. On this estate there are 77 uneconomic holdings with rent from 6s. to £15. There are five grazing farms, two of which are occupied by the landlord and three by grazing tenants. These farms contain 700 acres of land. The landlord has offered to sell the grazing lands to the Estates Commissioners, provided the agricultural tenants make direct bargains for their holdings at 23 years' purchase of their present rents with one or two years' arrears included when same is due. Three of these farms are convenient to the small holdings. Two are not so convenient. About 300 acres of bog or turbary are badly in need of drainage on this estate, which would be a useful public work, and give much needed employment. The next estate is that of John Smyth at Gartymadden. This was sold to the tenants, seven in number, five years ago, at 18 years' purchase of the valuation. All these holdings are uneconomic. About 200 acres on the same estate are occupied by Smyth as a grazing farm, the exclusion from which is a great hardship on the small tenants. The next is the Adragole, Ryan, Estate, which adjoins Lord Clonbrock's, and contains 300 acres. It is at present in Judge Ross's Court. Adjoining estates were sold under the Ashbourne Act at from 14 to 17 years' purchase. The Dillon-Brown Estate, which was purchased under the same Act, has two uneconomic holdings. About 70 acres of the fat of the land was sold to the grazier then in possession at 18 years' purchase. Next is the Trench Estate, with five uneconomic holdings. The Drumatubber grazing lands contain about 350 acres. A road is required to be made. There is one evicted tenant on this estate. There are five uneconomic holdings on the O'Sullivan Estate. The grazing farm just referred to is most convenient. The population of the district is 579. About three-fourths of these live partly on remittances from America and elsewhere. There is in the parish of Mulla 2,780 acres of grazing lands, with 134 uneconomic holdings and about 450 acres of bog land which require drainage and road convenience.

Mr. THOMAS CAHILL examined.

Mr. Thomas Cahill.

58133. Sir JOHN COLOMB.—Are you a farmer?—No. I live at Cloonahinch, Woodlawn. I am one of Lord Ashtown's victims of eviction. I have practical experience of farming and agriculture, and even of horticulture.

58134. What is your present business?—I am living as a commission agent since Lord Ashtown evicted me.

58135. Were you evicted for non-payment of rent?—No. I was evicted like a great many others from Lord Ashtown's estate from a religious prejudice that he got into his head, so that he dismissed all his Catholic employees.

58136. Mr. KAVANAGH.—Were you a tenant of his?—No. I was a herd in his employment, and a lot of the management of the farming and the estate in the absence of the head management devolved on me.

58137. Sir JOHN COLOMB.—You were a herd and bailiff?—No. I was herd and estate manager.

58138. Tell the Commission what you wish them to know?—I am president of the New Inn Branch of the United Irish League, a member of the Ballinasloe Board of Guardians, and a member of the Ballinasloe No. I District Council, and am well acquainted with the condition of the small farmers in this district. I represent Killaan Electoral Division at the meetings of the above-mentioned Board and know that the population of Killaan has dwindled down to half what it was during the past twenty years, principally owing to emigration, brought on first and above all by the curse of landlordism—maintained and supported by previous Governments—not only in Killaan Electoral Division, but in the entire Union of Ballinasloe, which statistics taken from the rate books can show. In saying that, I have witnessed scenes of eviction on the Woodlawn Estate that were very sad. There was one in particular that was carried out by Lord Ashtown, when a family of eleven and the father and mother were evicted while some of the children were lying in bed with the whooping cough. The father of this family asked Lord Ashtown for compensation for damage done by rabbits on his farm. The answer was, "You must go away; you won't come here and annoy me again; you won't be there next season." He brought the sheriff there and pitched that family out on the roadside, and that night they had nothing to cover them but the canopy of heaven.

58139. Was the head of this family a tenant under the Act of 1881?—No, he was the herd of a grazier, and Lord Ashtown threatened that if he did not dismiss

nd evict the herd he would take the farm from him. Ve have also a dearth of labour and no industries of ny sort whatever. We have, within this small elec- oral division of Killaan, forty holdings of £5 and nder £5 valuation, and twenty-five holdings of over 5 and under £10 valuation, while there are 3,557 cres of splendid grass lands, almost all of which re owned and occupied by Lord Ashtown. These ands are principally stocked with rabbits and there re but very few cattle and sheep and not one acre f tillage on them, and over 100 young men in this ivision have no prospect before them but emigration o America or elsewhere. With all this grass land vailable a great many families in the neighbourhood re compelled to buy tins of condensed milk during he greater part of the year because they cannot get he grass of a cow or the milk to buy. Compulsory owers of purchase and that alone is essential to medy this terrible state of affairs. Lord Ashtown s the only employer of labour in this district and lmost his whole staff is brought over from Scotland, ngland and elsewhere, while I often witnessed the elancholy scene of the stalwart young men of this istrict taking leave of home and friends at the oodlawn Railway Station on their way to foreign ountries. The twenty electoral divisions in Bal- nasloe Rural District have exactly the same sad tory as Killaan, as will be seen from the appended tatistics:—Number of holdings of £5 and under £5 aluation in union, 1,041; number of holdings over 5 and under £10 valuation in union, 806; acreage f grass lands in the union, 50,983 acres; popula- ion in 1841, 46,811; population in 1901, 19,279; nhabited houses in union in 1841, 7,646; inhabited ouses in union in 1901, 3,412; valuation of union n 1851, £64,817; valuation of union in 1901, 77,851; valuation of union in 1906, £79,469. There as a time indeed when Lord Ashtown was very opular in Woodlawn, and he had as fine a staff of oung Irishmen as could be got in any other part of eland, and he took a great interest in cricket and ther games and he had those men with him, but ome sudden change came over his lordship and he nt them all away and replaced them by strangers, nd he has kept up the whole thing still. There is nother matter that I want to bring before you, and hat is the sale of Charles O. Trench's property. hat sale was nearly completed. The game rights lone were in dispute between Charles O. Trench and is tenants. While the sale was pending Lord Ash- own stepped in and bought over the heads of the enants and gave an enormous price, for, it is sup- osed, the express purpose of defeating that sale. The reason I mention that is, it disturbed the peace of the district around Woodlawn and brought a lot of odium on Lord Ashtown for his action. Then when he got those tenants over, there was one man —a most respectable man—living on 60 acres of land, who, through some technical error in the law, had not got what you call a perfect tenant-right, and when Lord Ashtown got this place the very first man he took in hands was poor Dolan. It was a most notorious case all over the country and created great disturbance. He dispossessed him of all except one acre of marshy callow that would grow nothing. That man's wife died and he had eleven orphan children on his hands, and there he is to-day.

58140. Is that the same man with eleven children that you mentioned previously?—This is another man. Glynn I mentioned previously.

58141. Both had eleven children?—Yes. This case created a lot of discontent among the people. Everybody was anxious for fair treatment for poor Dolan except Lord Ashtown. I carried him on my back in childhood and I would not like to see him place himself in the position he is in to-day before the public and before the world, and I would really say that some influence has been brought to bear on Lord Ashtown that he really could not escape. The employment Lord Ashtown gives is really not to his tenants. He had a very old tenant. He was employed by Lord Ashtown, himself and his three sons. He ran into arrears for about three years. Lord Ashtown processed him. His friends helped him to pay the rent. There was a very poor living on this uneconomic holding in a bog. Lord Ashtown said, "Give up that land to me; you are not able to pay the rent; I will give you a house and an acre, and I will give you employment for yourself and your sons, and if you don't do that I will sack you on the spot." "I won't give up my land," said the man. "I will sack you on the spot," said Lord Ashtown, and he sacked that man and his sons, and when he had paid up through the assistance of his friends he processed him for the hanging gale and took it out of him.

58142. Was that man a tenant under the Act of 1881?—Yes.

58143. He fell into three years' arrears?—Yes.

58144. Is the history of the case that Lord Ashtown, instead of turning him out as he was entitled to, offered to give him a house?—"A house and an acre, and if you don't do that I will sack you." "I won't do it," said he. He dismissed himself and his sons and persecuted them for five years after.

Mr. James H. Rafferty examined.

58145. Sir John Colomb.—You are a farmer, land aluer, and shopkeeper, and live in Athlone?—Yes.

58146. Have you got a licence?—Yes. The follow- ng sales have been made by me on behalf of the ten- nts. Waitman's Estate, three separate estates, 21½ ears, all arrears of rent wiped out. It was an aver- ge of 1½ years rent. That would bring down the rice to about 20 years. Sproule and O'Malley Es- ate, 19¼ years' purchase, all arrears wiped out. In hat case the average was about 2 years, which would ring the estate down to about 17¼ years.

58147. The Commission cannot go into details of articular estates. Tell the Commission what it is ou advocate?—I have been acting on behalf of ten- nts of different estates to buy these estates from the andlords.

58148. You cannot go into particulars of particular states. We have not the time?—I have been trying o buy two other estates, Major Lloyd's and a eparate estate of Mr. Waitman and Mr. Levinge nd I have failed, as those men refused to sell at what I considered a fair value. The difference be- ween the prices asked by those landlords and what was accepted by neighbouring landlords under the Ashbourne Act would range from 25 to 100 per cent. There are a large number of small holders, so small hat even with industries they can scarcely live on hem, and it would be a great matter if those hold- ngs can be increased in size. The sons of many of hose small farmers can find no occupation and must herefore emigrate. It would be very desirable if mall farms could be provided for those young men.

58149. You want to have land purchased compulsorily from landlords and split up among those young men?—If those young men got fair sized holdings the entire family could live on them. They live on very small holdings, the average size being 2½ acres.

58150. Do you mean that the father should have his holding enlarged and that in addition the son should get a new holding?—I mean that those people should be migrated to the grass land in order to give them fair-sized holdings.

58151. Farmers' sons?—The family.

58152. And the old people to give up the land?—Have it for their lives and give it to the sons then.

58153. So that the sons would have the land?—No. The son and father would migrate to the grass lands.

58154. If there is a small uneconomic holding the son is to be given a farm?—The family.

58155. Are they to give up the old holding?—If the Estates Commissioners or the Congested Districts Board desire to migrate them from where they live, then those holdings could be divided among the neighbours to relieve congestion in the congested villages. The only industry in this country is lime and turf. They go long journeys with lime to sell it in the market. It is the only way they have of living. Labour is very scarce. They can only find labour for a couple of months in the year at very small wages. In my opinion this district should be scheduled as congested. In order to applot the lands the Congested Districts Board should have power to

Oct. 1, 1907.

Mr. James H. Rafferty.

buy and remodel this district, and migrate from the congested portion to the grass lands.

58156. Do you mean that congests from Connemara should come here?—I mean the congests from the district of Athlone Number 2.

58157. Would you keep the land to be divided among the people in that district, or allow anybody else to come in here?—There is not quite enough land for the people who live in the district, even though it was all divided among them. There is a very large population of small holders between £1 and £5 valuation. There could be a lot of local industries established such as peat, brick-making, iron ore, quarries, mills, especially flour mills, breweries, and distilleries. There were formerly weaving and tannery businesses, but all that has gone away out of this district. In fact there is no employment and no local industries at all at present. The War Office have a bog which they use as a rifle range, and the people in the locality are afraid that if it is not drained it will move next winter for want of drainage. The Shannon also requires drainage, as the people in some districts have to migrate to Athlone every winter with the floods, which cover nearly all their lands. The people are willing to migrate, provided they know the lands they are going to, and their annuities to the Estates Commissioners. The inspectors gave the people no information, although they visited the district, but it seems to me that the money is not forthcoming to purchase the grass lands. The farmers must always be prepared for the opening of the ports to Canadian and Argentine store cattle, which will cause a drop of about 33 per cent. In purchasing farmers should keep this in view as if they buy too dear they will be unable to meet their annuities, the value of the land will drop in proportion to the reduced price of store cattle, and the ratepayers will be liable to the State. The grass lands in this district amount to 10,872 acres, and there are 1,665 holdings under £5 valuation.

Mr. William Hardy examined.

Mr. William Hardy.

58158. Sir John Colomb.—Where do you reside?—At Dromalgagh, Ballinasloe. I wish to make a short statement about the holding that I have on Colonel Maberley's estate. Father Reidy stated that I hold 800 acres of grass lands in the parish of Moore, and that I conacred hay and took in grazing cattle, leaving the inference to be drawn that that was my usual custom of working the lands. On May 1st a report was circulated that I wished to let all the grass on the place, and I was deluged with applications from the surrounding neighbourhood to take in cattle, which I refused. I took in eight to oblige my poorer neighbours, who came and begged me to do so, and the price I charge, which I hand in, will show that I did not do it for profit.

58159. Those charges you made to the people who asked you to let them graze their cattle?—Yes. I took up about fifty acres for meadow for my own use, but was asked by several neighbours to set them some meadow, and as I had about forty tons of hay left over from last year, I consented and set eighteen acres. After the wet weather the hay and corn came in together. I could not manage both. I had seven acres left which I was keeping for myself, and they came and asked me to let them have this, which I did. I never conacred any before this year, and I never intend doing so again. I did it merely to oblige people.

58160. What is the acreage of your holding?—800 statute. There are about 300 acres of second-class grazing in the centre of the farm, 100 acres of plantation, 200 acres of rough moor and bog grazing, and about 100 acres of bog.

58161. Out of the 800 acres there are only 300 acres of tillage land?—About 300 or 350. A fair rent was fixed on the place in 1899, and the Commission estimated the carrying capacity of the place as 125 collops.

Mr. Philip Chevenix Trench examined.

Mr. Philip Chevenix Trench.

58162. Sir John Colomb.—You wish to make a statement in reference to Lord Ashtown's property?—Yes. I understood Father Pelly to state yesterday that Grady, Feeny, and Sheridan were evicted. Sheridan was evicted. He owed eight years' rent. Grady is there still. He is in possession of Feeney's holding, whom we bought out. We paid Feeney for going out. There were not 160 evictions in the Famine times. I have books going back to that date, to 1840, and as far as I can make out there are only about thirty names that appear to have gone in that period. There are notes put to nearly all of them that they were assisted to emigrate, and in some cases the actual sums of money are put down that they got; £60 was given to one. Except Sheridan, there have been no recent evictions. Everyone who has gone lately we have bought out, paying sums of money to buy out their interest. The wages at Woodlawn are ten shillings and fifteen shillings, and up to £1 a week.

58163. Mr. Bryce.—Is that all through the year?—Whenever they come to work.

58164. Do you give them steady employment at those rates?—Very nearly; whenever they come. Of course they go home occasionally to their own farms. Thirty-three tenants and their sons are employed instead of fourteen.

58165. We were given fourteen out of forty-seven uneconomic holders—the evidence did not refer to the whole body of tenants, but only to the uneconomic tenants?—There would be twenty of that lot. The proportion of the labourers at Woodlawn is about seventeen Catholics to one Protestant.

58166. Sir John Colomb.—That is in reference to the statement of religion entering into the matter?—It was stated that nearly all Protestants were employed.

58167. Mr. Bryce.—You mean the whole labour all over the estate?—It averages about seventeen to one. This man Dolan we were told about was an eleven months' grazing tenant under a grazing agreement. He broke up the farm and tilled in contravention of his agreement.

Mr. Dolan.—I had full permission to till the farm from the former tenant, Mr. Trench.

Witness.—It was one of the farms we bought from Mr. O'Hara Trench. I saw the agreement. There was nothing in it allowing him (Dolan) to till. Whether he had a private arrangement with Mr. O'Hara Trench or not I cannot say.

The Commission adjourned.

ONE HUNDRED AND ELEVENTH PUBLIC SITTING.

WEDNESDAY, OCTOBER 2ND, 1907.

AT 11.0 O'CLOCK, A.M.,

In the Courthouse, Castlerea, County Roscommon.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir ANTONY MACDONNELL, G.C.S.I.; JOHN ANNAN BRYCE, Esq., M.P.; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. JOHN P. HAYDEN examined.

Oct. 2, 1907.

Mr. John P. Hayden.

58168. CHAIRMAN.—Have we got your description; you are well known, of course?—My business is that of a newspaper proprietor. I live in Westmeath, but I am a native of Roscommon, and represent the Southern Division of this county in Parliament. I have been asked by the Rural District Council of Roscommon to give evidence on their behalf. I prepared some figures with regard to the population of the county at different periods. The periods I have taken are from 1841 to 1901, and I wish to hand the figures in (*figures handed in*).* It will be seen from these figures that the population of the Co. Roscommon in 1841 was 260,000, and in 1901 it had fallen to slightly over 100,000, and I believe the present estimate is under 100,000. The figures which I have handed in were prepared at the County Council office, and taken from the rate books and Census returns. These show that the decrease of population has been in every part of the county, but more particularly in those places where the land is good. I have taken a couple of instances. The returns are in Poor Law Electoral Divisions. I take as an instance of the good land the Electoral Division of Castleteehan in Castlerea Rural District. There the land is valued at 16s. per statute acre, and the population has fallen eighty per cent. Where there were five people there is now only one. As a contrast, I take the Electoral Division of Artagh North, on the west side of Castlereagh. There the land is valued at 6s. 6d. per acre, and the population has fallen only three per cent. I take that as showing that the people have gone away from the good lands, not through any motive of their own, but because they had to. Another of the returns which I have had prepared shows the extent of the small holdings in the county. For instance, of the total number of agricultural holdings in the Co. Roscommon, sixty per cent are under £5 valuation, and eighty-five per cent. are under £12 valuation, which scarcely reaches the economic standard; ninety-four per cent. are under £25 valuation and ninety-seven per cent. under £50 valuation, leaving only three per cent. of the agricultural holdings over £50 valuation. This three per cent. represents 160,000 acres, and is practically all composed of large grazing farms, the number of ordinary worked farms of over £50 valuation in the County Roscommon being very small. These 160,000 acres, one-third of the arable land in the County Roscommon, are occupied by three per cent. of the agricultural population of the county. Then, with regard to the small portion of the population still left in the good lands, and comprised in these returns prepared for me, they are to a large extent composed of herds and the families of herds. I have made a calculation that if all the people of Roscommon were supplied with land to the same extent as the three per cent. are supplied, it would take seven counties each as large as Roscommon to give them land in the same proportion as the three per cent. hold it. The remedy for this, in my opinion, and that of the people—and it is one which the law now apparently sanctions—is that this congestion should be relieved by purchasing the good untenanted land, enlarging the existing holdings, and migrating the people from the poorer districts to the grazing ranches. In my opinion the powers of any public authority entrusted with these operations should be greatly increased. The first essential is that either the limit with regard to scheduling congested districts should be either removed or greatly enlarged. I would enlarge it to comprise at least the whole of Connaught. My reason for that is: you cannot treat a great problem like this in small areas. You must take the place where the disease exists and where the remedy for the disease also exists to be applied. The powers of the existing authorities are greatly limited by reason of the absence of compulsion. Compulsion is required for many reasons. The Congested Districts Board or the Estates Commissioners, or whatever else may be the authority, may, and in some cases have, purchased land, and in the immediate districts of that land there is other land, perhaps in small quantities, perhaps in large, which is necessary for carrying out the scheme, and the owner of that land refuses to sell it or demands an excessive price, and compulsion is necessary both for acquiring the land and for arriving at a fair price. Then, priority ought to be given in the transactions in regard to all estates which require re-settlement—that is in regard to an estate which has to be dealt with other than by the transfer of the ownership from the landlord to the occupier. Where the holdings have to be enlarged or distributed priority ought to be given in any part of the country to estates of that character.

58170. Sir JOHN COLOMB.—You mean estates of that character should be first dealt with in the area of operations?—Yes. Estates which require any kind of treatment other than the mere transfer of ownership should get priority over all other estates in the country, because the problem with regard to these is more urgent.

58171. Mr. BRYCE.—Perhaps you will explain that, Mr. Hayden?—I mean if the Estates Commissioners have a number of estates in regard to which agreements have been arrived at between landlords and tenants, or between the landlord and the Estates Commissioners, that the Commissioners or the Congested Districts Board should deal first with the estate upon which there are uneconomic holdings, or upon which there is untenanted land.

58172. That is, supposing there are twenty or thirty landlords selling, you propose that the purchase of these estates should be first carried through, and the work of distribution taken on hand as being the most important item, as it were?—Yes. There are really two sides to the land question. One is, an estate which requires simply to be purchased by the occupying tenants, and the other is an estate which requires the holdings to be enlarged and distributed. I would give priority to the latter class of estate.

58173 Irrespective of the date the agreement had been arrived at?—Yes. Then, another of the difficulties which I have come across in this question is the delay which exists in carrying out negotiations after landlords and tenants have agreed to a price, or after a landlord has agreed to sell his untenanted land.

* See p. 288.

Oct. 2, 1907.

Mr. John P. Hayden.

Sometimes an immense delay, extending into years, takes place before an agreement between the Commissioners or the Board and the landlord can take place. I know a case myself in which untenanted land has been offered by the owners to the Commissioners or the Board, and it has been a matter of years sometimes before negotiations have been completed, that is, before they have arrived at the period when a distinct offer is made. I think the public authority ought to be placed, as nearly as possible as it is for a public body to be placed in, in the position of a private purchaser. If the transaction be between two private persons it is very quickly carried out. The intending purchaser arrives very quickly at his estimate of the value. He makes his offer, and there is cash down at once. One of the great drawbacks to present transactions is that no public authority is in a position to go to the owner and plank money down at once, and I think there ought to be some arrangements by which the Board or Commissioners would be in a position to make an offer and plank down the money immediately. Another great drawback in this county, and, as I think, in most counties, is that the owners of land, and I am speaking particularly of untenanted land, when wishing to sell and get the money immediately they make an offer to the Commissioners, and then if they have to wait some years for it—a thing they don't want to do—put it up to public auction. When sold by public auction it is a matter of years before the land can again come into the market. In all these cases there ought to be a power of pre-emption given to the public authority in regard to this matter, so as to prevent any of the untenanted land required for public purposes to pass away for years, or for ever, from the use that the public require it for. There are cases in point in this county. There was the case where Lord Trimblesden had a grazing farm of, I think, 180 acres. An offer was made by the Estates Commissioners, and Lord Trimblesden desired to get the money immediately. Finding he could not get it he put the land up to public auction. Mr. Fitzgibbon appeared at the auction and bought the land, and it has since been sold by him to the Estates Commissioners, who divided it, and it is now in the hands of a number of young men, who work it. If Mr. Fitzgibbon had not appeared and bought the land—and I believe he bought it at a less amount than the offer of the Estates Commissioners—it would have gone to a grazier who would keep it for a number of years until, in the course of time, he would probably get broken and would have to sell it. In a case like that the Commissioners should have a power of pre-emption. There was another case of a somewhat different class at Tonlagee, near Fourmile House, in the Rural District of Roscommon. This was a grazing farm upon which there had been tenants occupying it in the owner's interest. The occupier had bought it, I think, under the Ashbourne Act, and there was an annuity on it. It was put up for sale, and was bought by a business man in the town of Ballinasloe, about twenty miles distant. It was bought at a public auction. As the law now stands, I understand that no loan can be advanced in respect of land upon which a loan had been previously had until that loan is redeemed.

58174. Sir JOHN COLOMB.—Do you mean a loan for the purchase of land?—Yes, where a tenant has bought out the land—purchased the landlord's interests—as the law stands that tenant, who has been converted into an owner, cannot sell to the Estates Commissioners his interest in that land until he redeems the loan already advanced. I think there ought to be a change in that respect, at least in regard to land that is required for the creation of new holdings, or the enlargement of uneconomic holdings. In the case of Tonlagee the land was purchased by a man living at a distance of twenty miles, who already holds a large amount of similar land in Roscommon and Galway, and who simply grazes it and gives no employment. It was the cause of a great amount of unpleasantness in the whole County of Roscommon. As a matter of fact it gave rise to the first case of cattle-driving in the County Roscommon, or I think in Ireland. In that case, if the law were different this unpleasantness and violation of the law, the presence of a large force of extra police in the county, prosecutions, and so forth, would have been avoided, because it was exactly the class of land suitable for the purpose of the Commissioners or Board for the enlargement of small holdings. It was just in the centre of a large amount of that class of land, and on the verge of it were a number of small holdings actually upon the estate of which it formed portion before the sale. There is a large number of uneconomic holdings, and the people were expecting to see this land, once it was for sale, divided amongst them, and, finding it was not, very naturally the limit of endurance was reached.

58175. Sir ANTONY MACDONNELL.—Who bought the farm?—It was bought by a gentleman named Beirne, in Ballinasloe. Ballinasloe is at least twenty miles distant.

58176. Were the small holders whose farms, in your opinion, ought to have been enlarged, living upon the estate?—Yes. Until this farm had become an estate in itself.

58177. It had been purchased under the Land Acts?—Yes.

58178. Were the small holders on the estate or on an adjoining estate?—They were not on that farm, but on the estate of which that farm formerly formed a portion, and these small holdings were purchased by the occupiers at the same time as the former occupier purchased the farm in question.

58179. You are aware that, under the law as it at present stands, the Congested Districts Board would not be able to enlarge the uneconomic holdings in its vicinity?—Yes.

58180. Most properly, you desire that the law in that respect should be altered?—Yes. An increase in the scheduled districts would meet that.

58181. Sir JOHN COLOMB.—In giving your illustrations you spoke about auctions. Auction of the fee simple of land is not common in this part of the country, is it?—Not common; but they are becoming so now since the working of the Land Purchase Acts.

58182. The sale of fee simple?—Yes. This was a sale of fee simple, subject to an annuity under the Land Act. Since the operations of the various Purchase Acts, of course these cases of auctions of fee simple are becoming more common, because a good many people who purchase are selling. Lord Trimblesden's case was a case of fee simple subject to no annuity. Tonlagee case was a case of fee simple subject to annuities under the Purchase Acts.

58183. Mr. BRYCE.—In the Tonlagee case would not the difficulty have been met at once had there been compulsion? Could it not always be got, if wanted, by the exercise of compulsion?—I am not quite clear that it could. I do not know whether it is by an operation of law or not the Land Commissioners are debarred from making advances in respect of holdings on which an advance has already been made. So that in a case like Tonlagee you would require two changes—one empowering the Land Commission to use its discretion in cases of the sort, and one giving the power of compulsion or pre-emption. I want to deal with two classes of cases—the case where the old owner who has not bought under the Acts wishes to sell, and where the owner created by the Purchase Acts wishes to sell.

58184. Mr. KAVANAGH.—Do I understand you to say that the new purchaser cannot re-sell to the Estates Commissioners?—Not until he redeems the amount advanced to him.

58185. Sir ANTONY MACDONNELL.—Would not your point be met if there was an arrangement whereby the first loan would be redeemed by the Estates Commissioners by the advance of purchase money which the Commissioners are prepared to make? It would be merely a book transaction?—Yes; as a matter of fact I believe it is done by some round-about method of book-keeping at present.

58186. Well, it is done, at all events. On the day in which the transaction is to be carried through the Estates Commissioners redeem the annuity by taking credit for the amount of money they are going to advance?—Yes; I think it is informally done in that way at present, and I do not see why it should not be the recognised custom. Then, again, in the sale of some estates in this county, I find that some land that is required for the use of the public is sold back to the landlord.

58187. Sir JOHN COLOMB.—By whom?—By the Estates Commissioners. I wish to refer to the case of the Bermingham Estate, close to the town of Roscommon. This estate consisted mainly of untenanted land. The whole of it was sold to the

Estates Commissioners. The Commissioners then re-sold over ninety acres of it to the owner, who is a clergyman living in the County Meath. I was informed by the Chief Secretary, in the House of Commons, that the reason the Commissioners re-sold it was that it was demesne land, and there was a residence. Well, I know the place all my life, and I was rather surprised to hear that it was a demesne and residence. There is no residence, as a matter of fact. There is an ordinary herd's house, which the Commission can see for itself. It is occupied by a herd, and was never occupied by anybody else. In no sense has it any of the characteristics of a demesne. The owner is not living there, never has lived there, and never can live there unless he builds a house upon it. The Rural District Council of Roscommon, some time ago, wished to take a portion of this land for the purpose of the Labourers Acts, and Mr. Bermingham demanded a price for it that was £25 an acre more than that for which it was re-sold to him by the Commission. I think there ought to be a provision that no land should be sold back to the former owner unless it is strictly demesne or strictly home farm.

58188. Sir JOHN COLOMB.—You don't raise any point over the re-purchase by the owner of the demesne or home farm?—I raise no point against the re-selling of demesne or home farm, but I want demesne or home farm to be more strictly defined than it seems to be when transactions like this can take place. Another case I wish to bring under your notice is the Estate of Lord Essex. This estate comprises most of the town of Roscommon, and a very considerable portion of the rural district. The landlord is an absentee. I do not think Lord Essex was ever seen on his Roscommon property, except once, when he spent a day going through it. His agent lives in the County Meath, and never visits the district, except twice a year, when he arrives in the morning to collect rents, and leaves in the evening. In that case I am not sure if the tenants have applied to the landlord, but they have applied to the agent for terms; but, inasmuch as they never see the landlord, and the agent only for a few minutes when they are paying him rent, there is great difficulty in dealing with it.

58189. CHAIRMAN.—Has Lord Essex any property outside the town of Roscommon?—Yes.

58190 Has he got agricultural land in Roscommon?—Yes, a considerable quantity, both agricultural and urban. The tenants have applied to the agent for terms of sale, and the agent has said that Lord Essex is willing to sell; but they cannot get at either the agent or Lord Essex. There is no responsible representative of the landlord in the district at all. That brings me to another point, which is, that the powers to advance money in respect of tenancies in rural towns ought to be clearly defined. The public authority should have the power to purchase, or to advance money in respect of towns such as Roscommon.

58191. Sir JOHN COLOMB.—Do you mean that where there is an estate with a town upon it, and where that estate is sold for re-settlement, that the Commissioners should have more power than they now have for the re-settlement of, and sale to, town tenants?—Yes. Where the Land Commission do not consider that the security of the houses would be sufficient for the advance to tenants, they are willing to supplement the amount which would be advanced by the Commission. Another obstacle we have met in this county in regard to acquiring untenanted land, is the recent creation of leases for the grass lands. For instance, there is a case not very far from here, at Ballintubber, where a farm on the Hughes Estate was let on the eleven months' system for many years past. A few months ago a lease was made to a man named Payne. Now, Mr. Payne has either paid nothing for this, or if he has, it is a small sum. I regard, rightly or wrongly, Mr. Payne as a speculator in this matter. Some time ago he acquired an interest on a farm on another estate. This farm was purchased by the Commissioners, and Mr. Payne received £1,000 for his interest in the land—an interest which was created simply by the lease granted to him; and that £1,000 did not in the least diminish the amount which was paid to the landlord. It simply meant making a present of £1,000 to Mr. Payne, which the new owners of the land have to pay back in instalments.

58192. Sir ANTONY MACDONNELL.—You raised that question with the object of illustrating the point you now make. You don't refer to Payne's taking the lease of the Ballintubber farm as anything exceptional?—Oh, no.

58193. The lease would have been given to somebody else if he had not taken it?—It probably would.

58194. If Mr. Payne held the farm ten or twelve years the necessity of compensation would be more apparent, would it not?—I really don't think it would.

58195. If he held the farm a long time, and if it was to be taken from him because the Congested Districts Board or the Commissioners wanted to get hold of it, would you not admit he would have some claim to compensation?—I would not. I would think that his interest in it might be judged by the amount which he paid for the interest. In this case I take it that it was a friendly arrangement between the owner or the owner's agent and Mr. Payne.

58196. If a man is given a lease for thirty years, and he holds it for ten years, he has a beneficial interest in it for the balance of twenty years?—I think one would have to examine into the circumstances of each case. If it were a *bona fide* business transaction I would agree with that proposition, but if it were apparent from the circumstances that it was a mere matter of speculation, even if he held it for a number of years, I think it would weigh very much with me in the matter.

58197. A speculation on his part?—Yes.

58198. I suppose that is really the motive which induces a number of graziers to take farms, but business is more or less a speculation, with the hope of making profit?—I think there is a big difference between the man who in the ordinary course carries on business by which he makes a living, and the man who speculates in the sense of gambling. I take it that this is more of a gamble than a business transaction.

58199. Mr. BRYCE.—You think there is evidence, there was collusion between him and the landlord in this case?—Well, collusion is rather a harsh word.

58200. A desire to do him a good turn?—Yes, exactly. This case has been the cause of a great deal of bitterness and trouble in County Roscommon. To begin with the farm has been occupied by a very large force of police owing to the irritation caused amongst the people by the granting of this lease. The people feel that once the lease was given that the land was taken away from them absolutely. Whilst it was let on the eleven months' system they had some hope that some time or other it would be sold to them. The lease looked like taking it away from them absolutely, and not unnaturally they were rather irritated at it, and they expressed their impatience in various ways. The place has been occupied by a very large force of police, estimated from 80 to 300. I believe at some periods there were as many as 300.

58201. Sir ANTONY MACDONNELL.—Oh, no. That was only during the trials at Ballintubber?—There is still a considerable extra force. The number does not affect my point except in regard to expense. For a considerable time the force was close on 100. A number of people were prosecuted and imprisoned, and even this day four women are being released from Castlebar Jail after spending a month in prison in connection with this farm. I think that for the sake of public peace that transactions such as these Mr. Payne has entered into ought to be prevented by law, and that all such leases entered into, at least since the passage of the Act of 1903, ought to be void. In any future legislation these leases should be declared void. There are a couple of farms on this estate. One is held by Payne, and another by his brother-in-law. Between them they have 500 acres of untenanted land, simply used for grazing by non-residents.

58202. CHAIRMAN.—Do you assume that if machinery is to be given to any body to acquire land for the relief of congestion that that power should be confined to untenanted land?—No.

58203. Would not your point be automatically met in that way?—I don't quite follow.

58204. I mean you would not exclude lease-holders or even purchasers from the operation of any compulsory clause?—No.

58205. In a case of this kind it would be perfectly feasible?—Yes. I want to see the law such that the purchasing authority could, by compulsion, take land of this character, but in regard to all transactions such as these, I want slightly more than that. A man such as that should not be paid anything for

Oct. 2, 1907.

Mr. John P. Hayden.

his interest. I want to clear him out without any compensation whatever, inasmuch as he has no real interest.

58206. Sir ANTONY MACDONNELL.—In regard to the whole transaction, as the law at present stands, was it not a clear, plain transaction. Mr. Hughes was the owner of certain property in Ballintubber. He desired to let a certain portion of that property on lease. He offered to execute a lease in favour of a certain person. They could not come to terms, and Mr. Payne made a better offer, and the lease was then executed in his favour. As the law stands that was a perfectly legitimate transaction. Then, when Mr. Payne went into possession certain illegalities were committed, and the people who committed these illegalities were prosecuted before the Courts, the offences were proved, judgment was passed against them, and they have purged their offence. They refused to give security to keep the peace, and they went to jail. If the owners are not allowed to lease their lands before they are bought there is an end to all law and order. If people break the law they must take the consequences?—I do not think the people who have been punished have complained. These people were well aware that they were violating the law as it now stands, but they have learned the lesson that the only way in Ireland to change the law is to break it.

58207. We are proceeding to purchase grass lands as fast as we can. It is the declared object of the Government to purchase grass lands for the relief of congestion. We have not the money, and you know as well as we do how difficult it is to raise money. Disorder will not inflate Consols, and if the law is broken in the way you mention the capacity of the Government to raise money on favourable terms will not be promoted. The only people who suffer are these poor people who break the law?—These people knew they were breaking the law, and they have done it with their eyes open. They do not complain that they have been punished, but they do know that in undergoing punishment they are helping to bring about an alteration in the law.

58208. They are certainly forcing an open door so far as the purchase of grass lands in Connaught is concerned?—Well, not in cases such as that upon this estate.

58209. CHAIRMAN.—Are not we deviating a little?—With regard to one remark of Sir Antony's. There is a precedent in the Act of 1903 which prevents advances in respect of holdings of tenancies created for a certain number of years before the passage of the Act. The date fixed, I think, was 1900.

58210. Sir ANTONY MACDONNELL.—You mean judicial rents fixed then?—No, but where tenancies were created. The Act of 1903 was promised in the King's speech of, I think, 1901, and after that promise the landlords and a certain class of tenants, foreseeing what might happen, created tenancies for a certain number of these large grazing farms, and the Act of 1903 contains a clause preventing any advance in respect of holdings created since 1900. The clause said that no advance exceeding £500 should be made, except in the case of small holdings, and I think that is not a bad precedent for such an alteration in the law as I now propose.

58211. It is just a question of *bona fides*?—Yes. I refer to a case such as Ballintubber simply because I believe it is a matter of speculation or gambling, and not a *bona fide* transaction

58212. Mr. BRYCE.—I do not very well see how you are going to distinguish at first blush, without any inquiry. There is nothing to go upon as to whether the thing is a matter of ordinary business or a matter of speculation?—I think the evidence might be found in the amount of money which passed in regard to it.

58213. Looking at the thing as a business man, the landlord has got land and he wants to lease it out, and he does not know whether he is going to sell his property, and he makes a lease out. It is only when a row arises that anyone knows anything about it. How is the thing to come before the public authority?—It will come before the public authority if the public authority in possession of compulsory powers proceed to purchase that land, and the different parties come forward to give evidence of their interest.

58214. I quite understand that; but I thought you were making a suggestion of compulsory purchase, and that a separate piece of legislation should be introduced forbidding transactions of that kind?—Well, so I have; but these transactions will become known only to the public authority when it comes to investigate the cases. The public authority will know it when the question of purchase arises—either voluntary or compulsory.

58215. Once you have got compulsory powers, you must have a note to the effect that leases created since a certain date should be examined as to whether they are genuine transactions?—That would suffice—that an instruction under compulsory purchase should be made that in all cases of untenanted land inquiry should be made as to whether the leases are genuine.

58216. CHAIRMAN.—Would it not be difficult to prove whether a lease of that kind was genuine or not?—I think it could be proved by examining the amount of consideration which passed for the leases.

58217. Sir JOHN COLOMB.—You represent to the Commission your view that towns such as you have mentioned should be brought within the general influence in the arrangement of the land, and now assuming that such legislation has been carried into effect, an enterprising shopkeeper, as a speculation, goes to the landowner, and says: "If you give me a lease, I will pay so much for so many years." That is a speculation, and the landlord grants him the lease. Am I to understand, if your proposition is carried out, that that arrangement would be declared void?—Oh, no. You mean, Sir John, land in towns. I am referring to leases for grazing lands.

58218. You are not laying down a general principle, but representing to the Commission that that should be done in the case of grazing lands only?—Yes.

58219. Therefore you are going to apply to grazing lands what you cannot apply to other things?—No. The instance you give, though it is a speculation, is an ordinary every-day business transaction, a transaction which greatly helps in the development of towns, whereas the other is a gambling speculation, maybe sometimes the result of collusion between certain parties, in order to do some of these parties a good turn.

58220. At all events, you are in favour of the application of principles in the case of grass lands that you would not apply to other classes of business?—Yes. There is another class of case, and it is this; where the occupying tenant of a grazing farm has a small interest in it. It may be that he is a yearly tenant, or has a few years of an ordinary *bona fide* lease unexpired. If he is unwilling to sell, it is a very great obstacle to purchase of the whole estate, and it is very often a menace to the peace of the district. Such a case occurred on the Crichton Estate, near Fourmilehouse. Mr. Crichton is willing to sell his entire estate, which consists of tenanted and untenanted lands. On it is a farm held by a shopkeeper in the town of Strokestown, about six miles away. The shopkeeper is not willing to sell his interest. Some years ago he bought, for a nominal sum, the lease from a former occupier, and that lease, as I understand, has only one or two years to run. The people have no desire to do him any injustice, and they are willing that he should be paid for his interest. The sale of the whole estate is blocked by the attitude of the tenant of this grazing farm of about 100 acres. The result there is the same as in the Ballintubber case. It has not been the scene of disorder on the part of the people, but it has been the scene of considerable disorder on the part of the police. A public meeting was called regarding this farm, and I was invited as one of the County members. When a contingent of the people were peacefully passing from Strokestown to their homes they were savagely batoned by the police. That happened at the time they were passing by this farm, and the police may have taken it into their heads that they were going to intimidate somebody, but there was no one on the farm. The owner was miles away. As a matter of fact, they had just come from the town where the owner lived, when the inspector of the police ordered the baton charge. There was very considerable ill-feeling over the matter, and the place has since been occupied by a large force of police. At the meeting at Fourmilehouse, not far from this place, I was asked by the people in the district to attend a meeting there, and I found 80 armed policemen there, most of them armed with revolvers and bayonets, at this meeting. I have no objection to policemen getting a pleasant holiday by attending a meeting like that on a fine day, provided the people of the county have not to pay for it.

58221. Sir ANTONY MACDONNELL.—Did you ever know of an instance of cattle driving immediately following a meeting of the sort you are describing?—No, not one.

58222. They have occurred, and the Government is bound to see that cattle drives should be prevented as far as possible, and that incitements to cattle driving should not be carried into effect by the actual execution of the drive?—Well, I don't think there has been a single case of cattle driving in the county, either on the day of the meeting or immediately after the day of the meeting, as far as I can recollect.

58223. I am here in a dual capacity, and I don't like to complicate my functions as a member of the Commission with what I know as an executive officer of the Irish administration, and therefore I won't cross-examine you on the point. It would be beyond our province. All I would say, Mr. Hayden, is that it is possible to give reasons to justify the Executive Government in the action which they have taken in these cases?—I think I know all the cases in this county, and so far as I can recollect, I do not think there was any drive following a meeting. Do you know any case yourself?

Sir ANTONY MACDONNELL.—I do not like to enter into a discussion at all on the point.

58225. Sir JOHN COLOMB.—The shopkeeper is not willing to sell?—The owner is willing to sell the entire estate, tenanted and untenanted, and he is willing to sell the particular farm held by this shopkeeper, but the shopkeeper is not willing to part with his interest in it. That is an instance of a very common obstacle to the acquisition of that class of land. I would have compulsory power in respect of land of that class.

58226. I understand the shopkeeper is one of several tenants on the property?—Yes.

58227. You have given the name of the landlord. Can you give the name of the shopkeeper?—Yes, Mr. Owens.

58228. Is it your opinion that being a minority of one he bars the operations of the Congested Districts Board?—It is not a case which the Congested Districts Board can deal with, because it is outside the scheduled area, and therefore it is a case for the Estates Commissioners. There is no power, so far as I know, under the existing law to deal with a minority.

58229. Assuming that the Estates Commissioners have the power of dealing with this property, aren't you aware that there is an existing law by which a minority can be prevented from blocking the sale?—I think, Sir John, we are at different points. The power to which you refer is, I think, that if three-fourths agree to purchase, the one-fourth are deemed to have purchased. I don't want to have this man to be deemed to have purchased. What I want is power to compel him to clear out.

58230. MR. BRYCE.—This man is not a tenant at all; he is only a leaseholder?—This man is a non-resident tenant with an expired or almost expired lease. He holds as a yearly tenant, and his tenancy can be terminated at any time, I believe, by the landlord. If the landlord is not willing to terminate his tenancy I want power to be conferred on a public authority to terminate it. If he possesses any substantial interest in it he should be compensated for that interest, but I don't want him to purchase.

58231. The Congested Districts Board have certainly got authority in the case you mention, because we had a case before us in connection with the purchase by the Congested Districts Board of the Kane Estate?—Oh, yes, if this were in a scheduled district, and if the Congested Districts Board bought it they would have power.

58232. They could give him notice to quit and then compensate him?—Yes. I want the same power applied in this case.

58233. Sir JOHN COLOMB.—You want the same power applied to this district as applies in the congested districts?—Yes. Another point I want to bring under the notice of the Commissioners is in regard to drainage. There is a very considerable amount of land which could be vastly improved by drainage, and a good many holdings that now are uneconomic in my opinion could be made economic without enlargement if a system of drainage were carried out. I have some statements here dealing with the importance of drainage in two electoral divisions in Roscommon. These districts adjoin the Shannon, and the holdings are mostly small, and a good many of them are uneconomic. The remedy for this, so far as their immediate district is concerned, does not exist by the presence of large quantities of untenanted land. If certain small rivers running into the Shannon were drained the holdings would be very considerably improved, and in most cases made economic. Whilst I am on that point I would like to mention a matter in connection with the River Suck drainage. The Suck is an extensive river running between this county and Galway, and some years ago very considerable sums were spent on the drainage of the Suck district. The drainage was undertaken by the landlords of the district, and the money was advanced by the Drainage Board. After a very considerable amount of money was wasted, the original estimate was found, like most estimates, to be insufficient, in this case very insufficient, and a considerable grant, I think it was £50,000, was procured from the Treasury.

58234. Sir ANTONY MACDONNELL.—A free grant?—Yes. The tenants who according to Act of Parliament were to bear their share of the expenditure were not consulted at all.

58235. Were not their representatives on the Board?—I am coming to that point. The tenants had not been consulted at all in the matter, but when the Bill was going through Parliament in connection with this free grant, advantage was taken of the Bill to secure a representation for the tenants, and then, after many thousands of pounds had been wasted, the tenants got a representation on the Drainage Board. When the assessment came to be made the principle upon which it was made was this—that there was to be so much put upon the tenants as representing the actual value of the improvements made upon their respective holdings, and the balance fell on the riparian proprietors. So far as the tenants are concerned the grievance exists in regard to the allocation of the amount. They hold that an excessive value was placed on the improvements made. There is no doubt that improvements were affected, but the difference arises as to the value of these improvements. In many cases the assessment on the tenants for improvements exceeds, and in some cases greatly exceeds, the amount of their rent, and there are cases of very great hardship in connection with it. Considerable harm has been done to the prospects of drainage in this county and in Galway by the fact that the tenants along the banks of the Suck are so heavily burdened. It has made other tenants chary about joining together for the purpose of carrying out drainage works which are an absolute necessity. I think that the Commission would do well to examine into the facts of the River Suck drainage. I would suggest that if they can that they would make some recommendation by which this burden would be lessened, either by having a portion of it wiped out or by an extension of the period of repayment. In addition to the bad effect it has had on public opinion it impedes the work of purchase very much, because both the landlords and tenants hesitate. The landlords have to redeem the portion thrown upon them, and the tenants do not like to buy while they have a large burden still upon them, and the whole work of maintenance will be thrown upon them too.

58236. You will admit, I presume, that for the excessive expenditure upon the Suck drainage the Irish Government is in no way responsible?—I don't quite admit that the Government was not responsible. The Irish Government may not have been.

58237. Am I not right in this, that the landlords formed a Drainage Committee, and that they made through the engineer whom they had appointed estimates for the drainage of the Suck?—I beg your pardon. They made it from plans, and these plans were submitted to the Government and the Board of Works.

58238. The Board of Works took no responsibility for the plans. They saw, broadly speaking, they were such as might be passed. They did not take any responsibility for the professional accuracy or professional character of the plans. They then said they would advance the money, and did so on certificates of work done. It came to pass that the work on the Suck drainage was very often suspended for a series of years, and work which had been done had to be redone, so that if the work had been properly carried out by the engineers, whom the landlords' committee

Oct. 2, 1907.

Mr. John P. Hayden.

engaged, the expenditure would be very much less than it was. The responsibility of the Board of Works consisted in paying out sums of money for work actually done. The Irish Government did not take any responsibility for the efficiency of the schemes?—I do not question your account of it.

58239. I think you will find it correct?—Yes; but I imagine that the Board of Works submits plans of this character to experts or to their engineers.

58240. They take no responsibility for that?—I think they ought to. I think they are very much to blame if they advance public money in that way.

58241. I quite agree with you. I think the system is entirely bad, and must be altered and re-modelled; but this work was done under the statutes regulating; but I quite agree with you that the whole system ought to be remodelled?—I think a Board of Works engineer visited the district.

58242. Yes; but they only saw that the work for which the certificates were signed was actually done?—If the Board of Works engineer did not visit the place before the plans were sanctioned they were greatly at fault. However, I am not speaking for the landlords of the district; I am speaking for the tenants along that place, and my point is that, whoever else was consulted, whether the Government was or was not, that the tenants were not consulted until a wasteful expenditure had been incurred, and there was a dead loss, and until the point was reached when a free grant had become an absolute necessity, if the money already spent was not to be entirely thrown away, and the co-operation of the tenants' representatives in Parliament was necessary to secure this free grant. As a price for their co-operation, they were given a representation on the Board for the first time, and since that there has been very little charge of wasteful expenditure; and that is the point I wish to make as a plea for some mitigation of the burdens the tenants have to bear. I have been at some amount of pains in connection with this matter. Their claim is not a repudiation of the tax at all, but that the period of repayment should be extended as long as possible in order to lessen the annual burden.

58243. Mr. Sutherland.—As to this question of improper expenditure, are you prepared to say that the works have been of great good in the district?—I think so.

58244. Are they being maintained in a state of efficiency now?—Yes.

58245. Do you know generally what the nature of the works is?—Keeping the river dredged, and keeping the drains going into the river open—just maintaining the drainage work which had been done.

58246. Does that consist in deepening the river at certain places?—Yes.

58247. And that work is not completed, as I understand?—The work now carried on does not consist in deepening.

58248. But when being carried out?—Yes.

58249. Chairman.—Does the Drainage Board levy the rate?—Yes.

58250. And do they collect it?—They collect it through a collector appointed by themselves.

58251. They levy and collect the rate for maintenance, and the rate for repayment?—Certainly, for maintenance, and the Board of Works collects the amount for repayment.

58252. Then the Drainage Board has nothing to do with the repayment of the original money?—No.

58253. Sir John Colomb.—The Board of Works collects the rate for capital expenditure and the Drainage Board the rate levied for maintenance?—Yes.

58254. What you want is relief in the rate for capital expenditure?—Yes; relief by way of extension of the period for repayment. It should be made smaller, and the period for repayment the same as under the Land Act.

58255. Mr. Bryce.—What is the period for repayment of the capital sum?—I think it varies from twenty to twenty-five years.

58256. What is the rate of interest charged on the sinking fund?—I do not know, but I can ascertain for the Commission. The total amount expended was £160,000, of which £50,000 was a free grant; £60,000 was borne by the landlords and £50,000 by the tenants. Eleven years have gone, and that leaves about three-fourths still to pay; perhaps rather less than three-fourths. Of the capital expended, about £70,000 was really ineffective. With regard to the relations between the Congested Districts Board, the Estates Commissioners, and the Agricultural Department, I agree in general with the evidence given on that head by Mr. T. W. Russell. As I understand his evidence, it is to the effect that the Estates Commissioners ought to be the sole purchasing authority, and that it should be the duty of the Estates Commissioners, immediately upon the purchase of any estate requiring re-settlement, to hand over such estate at once to the Congested Districts Board, and that the work of re-settling it, splitting up grazing farms, carrying out drainage work, and so forth, should be done solely by the Board. The work of agricultural education should be entrusted solely to the Agricultural Department, and there should be no clashing of authority between any of these three bodies. Each should have its work clearly defined, and there should be some method of consultation between the three, if necessary. Then, in respect of the composition of the Congested Districts Board, in my opinion, there ought to be a popular element upon that; that is, there ought to be certain members on the Board who would not only be in touch with the people, but who would also be responsible to them. There ought to be persons on the Board put there either by direct election by the people, or by selection by the County Councils of each county; and I think there ought to be at least one member of the Board who would be a paid member, upon whom would be thrown a certain amount of defined authority, and who would be responsible between the meetings of the Board. In making this suggestion, I follow the precedent that exists on the Board of Commissioners of National Education. Further, I think the meetings of the Board ought to be more frequent than they are, and whenever they are called for the purpose of dealing with a particular district in which the operations of the Board are carried out, they ought to be held in that district if at all possible.

58258. Sir Antony MacDonnell.—More frequent than once a month?—Yes.

58259. Would you be satisfied with special meetings of the Board as the occasion arises?—When it is an unpaid Board, more than once a month would be very hard. Special meetings, I think, would suffice.

58260. That is the way at present?—But, as between the meetings, there ought to be a member of the Board who should have a certain authority, and who ought to be paid.

58261. Sir John Colomb.—Can you give me any concrete instance of where loss or inefficient work has resulted from what you call the clashing of the three authorities?—I cannot.

58262. I asked Mr. Russell that, and he could not tell me?—No; but there is a general feeling of dissatisfaction; sometimes it exists with the landlords, and sometimes with the tenants, and it is particularly in regard to purchase—that there are two purchasing authorities in the same district, and that there is a spirit of rivalry.

58263. May I ask you this? Take your programme. The Board is dealing with a block of estates. The Estates Commissioners are to purchase. Then comes in the Congested Districts Board, and then comes the Agricultural Department for instruction and development; and therefore, even on your system—even on the same estate—you will have three different authorities?—The Estates Commissioners would, of course, be very temporary, and the Congested Districts Board I would regard as temporary also. The Estates Commissioners would clear out the moment the purchase agreement had been made with the landlord, and the Congested Districts Board would be cleared out as soon as they had completed the work of re-settling the land upon that estate, and the Department would remain as long as the law leaves them in existence.

58264. Then you mean that the operation should extend all over Ireland?—No. I would have the Congested Districts Board operate in the Province of Connaught, and Donegal, Clare, and Kerry. I would confer upon the Estates Commissioners similar powers in regard to congested districts in any other part of Ireland.

58265. I can follow the general principle. Outside Connaught and the scheduled area, the Estates Commissioners would be not only the purchasing, but the settling authorities?—Yes. My reason for that is

that although there are estates of the class existing in Connaught, in other counties they are more easily dealt with, whereas the question operates here over a very large area, practically over the entire province, and some other counties.

58266. CHAIRMAN.—What is your reason for thinking that within the counties you have just named as being the field for the Congested Districts Board that benefit would arise from giving the purchasing power in these counties to the Estates Commissioners?—I have no instance in my mind, but dissatisfaction exists on the part of landlords and tenants. I think it is a bad principle to have two public authorities in apparent rivalry with each other in carrying out the same business.

58267. I can quite understand that, but supposing by any means the price at which land was transferred became as far as possible stereotyped by agencies other than those exercised by either purchasing body, then would you have the same feeling that one body was better than the other?—No. I have no feeling that one body is better than the other.

58268. You speak of compulsion. Now, isn't it your opinion that if compulsion is to be resorted to, it must be very clearly laid down on what basis compulsion is to be applied. If the result of compulsion is to lay down a fixed standard at which compulsion would be applied, then I say won't that bring in an agency for fixing price outside the functions of either purchasing body?—Well, I presume the purchasing body would arrange the machinery by which the compulsory price would be arrived at.

58269. Take the Evicted Tenants Bill of last year. An appeal in that case was granted, and I presume, as a matter of argument, that if compulsory powers were extended that the right of appeal would be given with that extension?—Yes, if you take the precedent of the Evicted Tenants Bill.

58270. I do not know whether it is proper for me to say so, but personally I cannot conceive that Parliament would consent to allow either the Estates Commissioners or the Congested Districts Board to compulsorily purchase land, when they themselves are the purchasing body, fixing the price of the land. I assume, for the sake of argument, where compulsion is applied that there would be an appeal to some other body, as in the case of the Evicted Tenants Bill. If that is so, would not that mean that the judge, or other body to whom the appeal would be referred, sooner or later, lay down pretty clearly what was the basis of price on which compulsion was to be exercised?—Yes, I assume that.

58271. If that is so, does it matter whether that purchase is carried out by the Estates Commissioners or the Congested Districts Board?—Well, I think it would. In my opinion the Congested Districts Board has its hands pretty well full in carrying out the work of improvement, without adding to its labours the duty of negotiating, because even under compulsion, there will be negotiations.

58272. I mean, isn't it certain that if you have compulsion, and if under compulsion the price is more or less stereotyped, as I suggest it would be, the private negotiations would cease unless they brought the price up to what would rule under compulsion. What landlord is going to sell at a price lower than he knows he can get on appeal?—If there was an actual stereotyped basis fixed, then no landlord would sell voluntarily unless he got the higher price; but there is always uncertainty in going to law, and, of course, the application of compulsion would mean going to law.

58273. As a matter of fact, will there be uncertainty about going to law?—Take the cases of compulsory purchase in England under the Land Clauses, and is it not a fact that by the operation of time and the number of cases brought into Court, the people know pretty well what price they will get, and that the same thing will happen in Ireland?—The operation of time results in certain principles being laid down, that under a certain set of circumstances a man may get a certain price, and we find by the operation of compulsory law in England that numerous cases are arranged without going into Court at all, in order to avoid the uncertainties of the law Courts.

58274. I suggest to you that the reason the cases are settled out of Court is that the operation of the Court is so well known that the people arrive at the prices which they would get?—There are elements in connection with fixing price which would prevent one stereotyped arrangement. There may be a certain number of general principles, as for instance where good land might produce from the Court a higher price than bad land. But there is land which has never been in Court at all, there is untenanted land which has never been subjected to any kind of judicial procedure. You cannot have a stereotyped arrangement to meet all the cases. It would certainly take a considerable time before the different principles were laid down.

58275. At any rate, without discussing that point, for it is not one we can discuss at the moment, may I take it that your reason for pressing that the Estates Commissioners should be given the purchasing power for the whole of Ireland is chiefly because in your opinion the Estates Commissioners have hitherto been able to purchase land at a more reasonable rate than the Congested Districts Board?—No. As a matter of fact, I have no opinion whatsoever on that point, and I have no means of arriving at an opinion. I have heard opinions expressed by others, but I attach no weight to such opinions, because I have heard people who ought to be authorities express contrary opinions. My reason is that there ought not to be two public authorities doing exactly the same work in the same district, and that the effect of having two such authorities must produce rivalry, and a waste of time and money.

58276. If you have no feeling that one Board has purchased at a lower price than another Board, if all you wish to bring about is a cessation of rivalry between the two Boards, in other words, as you say, that the two Boards should not continue to do purchasing transactions in the same locality, would not your point be met if the Board were to be the sole purchasing authority?—Well, I have one further objection, which is, that the Congested Districts Board ought to be left as free as it is possible to leave them to the very large work of improving, and that they ought to be left absolutely free from the larger work of negotiating prices and carrying out purchase transactions. I have two reasons—one to prevent rivalry and waste, and the other to relieve the Congested Districts Board as much as possible from one class of work, in order that they may more thoroughly devote themselves to another class of work.

58277. Your point is that rivalry would be avoided by an allocation of areas?—No, not an allocation of areas, but of duties.

58278. Your point as to rivalry in purchasing would be met by an allocation of areas?—It would, certainly.

58279. If you gave the Estates Commissioners purchasing powers for Ireland generally, and the Congested Districts Board for the counties you mentioned, would that meet your point?—Not in the way I desire.

58280. It would meet your first point?—Yes.

58281. Your second point is that the Board should not be given the responsibility of purchasing, because they have other work to do?—Yes.

58282. Now, as to that, does it not seem to you that there would be a danger of friction if the Board were to be the authority, and, as a consequence, would have to fix the annuities upon estates purchased by a different authority?—Yes; there would be a danger of course, that is, on the assumption that the Estates Commissioners did not take the same economic interest in the purchase transactions in what I may call the congested districts.

58283. What you suggest is that the Estates Commissioners buy an estate say, in Roscommon, and having bought it hand it over to the Congested Districts Board to be re-striped and improved, and re-settled upon annuities fixed by the Congested Districts Board. Supposing there was discontent would not the Board say, "It is not our fault. We had to fix annuities on estates over which we had no voice in the purchase." And would not the Estates Commissioners say, "No, it is your fault. You squandered money on improving"?—I think I would run all the risk of it. I think the advantage would be more than counterbalanced by the disadvantage.

58284. As a matter of fact, would not the work of purchase possibly be more rapid under a division such as I suggest, because if you get the two Boards on the same principle, isn't it more likely to be rapid if the Board has its field over which it can act, and

Oct. 2, 1907.

Mr. John P. Hayden.

the Estates Commissioners its field, over which it can act. On the other hand, if the whole work is thrown on the Estates Commissioners they will at one time be asked to turn their attention, say, to Westmeath, and at the same time they will be asked to come down to Connaught. They cannot be everywhere at the same time, and therefore would not a division of purchasing labour affect rapidity of purchase rather than delay?—I hardly think so. I think that my chief point would be to prevent rivalry. I think that the other point may be met by an enlargement of the staff of the Board, but, personally, I would prefer to have their work limited to improving, but I would not lay very much emphasis on it. I see a certain disadvantage.

58285. Isn't this the case at present. The Estates Commissioners are a body constituted under statute, with all the organisation of a modern up-to-date Department, with their chief men in Dublin, organising and directing, and with able agents and inspectors going through the country, carrying out these orders and instructions. Under a system such as that is not the work likely to be more rapid than under a system such as you have on the Congested Districts Board, where Mr. Doran is expected to do practically the whole thing?—Yes.

58286. Is not any delay of the Congested Districts Board explained by the fact that Mr Doran has practically the dual responsibility of explaining the policy to the Board, and, at the same time, carrying it out in the country?—Well, I think that is the point I have been trying to make.

58287. Would not any delay of that kind be perfectly well met if you have one man responsible, say, in Dublin for policy, acting in connection with the Board, with men under him, as the Estates Commissioners have, for carrying out his instructions?—Well, of course, that is a matter of staffing.

58288. Is there any reason to think that under such an arrangement the Congested Districts Board would be slower than the Estates Commissioners?—I don't think so.

58289. Sir Antony MacDonnell.—The suggestion is that the Congested Districts Board at present is not as efficient a body in purchasing operations as the Estates Commissioners, and the Chairman says that it can be made as efficient a body as the Estates Commissioners by the appointment or engagement of more staff, so that is, in other words, the creation of an additional department to the many departments already existing in Ireland. Up to the present Mr. Doran performs, in a manner which is the admiration of us all, functions of a diverse sort, but under present arrangements the Congested Districts Board cannot carry out purchase operations as quickly or efficiently as the Estates Commissioners, which have a special up-to-date staff for the purpose of doing it. Therefore, in order to bring the Congested Districts Board up-to-date in this way, and to a state of equal efficiency, the creation of another staff is necessary?—I don't take it as the creation of another staff.

58290. Well, an enlargement. You suggest the employment of the Congested Districts Board for purchase operations in the congested districts and the Estates Commissioners outside?—Yes, as an alternative to my first suggestion.

58290A. Would not that be calculated to create a double standard of land value?—I don't think so. The standard in the congested districts would, of course, be different from that outside.

58291. There is much land in Connaught of the same character as outside Connaught. If the purchase operations were conducted by two independent bodies, would not that have the effect of creating two different standards of purchase price?—I think the altered circumstances would very much affect the price.

58292. Sir John Colomb.—Can you give an instance of a delay having occurred in purchasing that was directly attributable to the fact that the Congested Districts Board did not exercise its powers?—No.

58293. Mr. Kavanagh.—I think you said that there was not more untenanted land in Roscommon than would relieve congestion?—What I said was that if the whole agricultural population were allotted land at the rate in which it is held by 3 per cent. of the agricultural proprietors it would take seven counties as large as Roscommon. I have no means of arriving at the amount of untenanted land, but 160,000 acres are held by 3 per cent. of the population. In a rough and ready way, I reckon it out that not more than 60,000 acres of this are occupied by *bona fide* farmers.

58294. I take it from you that in the relief of congestion the bounds of the county ought not to be the limit to the relief of congestion in that county?—No.

58295. Therefore, you would not object to people being brought into Roscommon from other parts?—No; but I would first attend to the wants of the people of the county. I think that the people in need of land, who would be suitable workers of land, and living in the immediate neighbourhood of it, should have first claim.

58296. Would the young men have a greater claim than migrants from congested districts?—In my opinion they would, and I will give a reason for it. The ratepayers of the county are responsible under the law as it now stands, and as I presume it will stand, for the repayment of the purchase annuities, and therefore I think that the representatives of the ratepayers ought to have some voice as to the class of men who would be allotted land, and it is quite possible they might think that a young man living in their own part would be a more suitable, solvent, and reliable man than a migrant brought in from some other county.

58297. You are aware that some counties are not as rich as Roscommon, and what would happen to them if your scheme was carried?—Well, take, for instance, Kerry and Donegal In these districts there ought to be an effort made to relieve their position by the provision of industries suitable to the districts, and to effect improvements by drainage and soforth in preference to migration. Personally, I have no objection to men being brought from other counties into Roscommon after the Roscommon people have been provided with land.

58298. There will be very little margin after the sons of tenants are all provided with land?—Well, I think it would be very much better to provide them with land here than to have them go to America. They are the best workers, and the men most likely to develop the land.

58299. I may take it that it is your opinion that the sons of tenants in Roscommon have a greater claim than migrants from other counties?—Yes.

58300. Mr. Bryce.—Suppose you found there was no means to relieve congestion in the West except by giving up land in counties such as Roscommon?—I don't think it is the case. I have the opinion that all the men in this county who are fit to work a farm and need land ought to be provided with land in the county. They have a certain amount of natural right to it, inasmuch as very many of them are the descendants of men who formerly occupied that land.

58301. You are aware if you pursued that policy you would be only pushing the evil day off for another generation? In thirty years time you would have exactly the same question; meantime you would not have relieved congestion in the West of Ireland?—I think, indeed, that we may rest contented in trying to relieve the state of things as they exist now without considering extreme possibilities in regard to the future.

58302. I am putting the question on the hypothesis that if you pursue the policy you recommend you would not relieve congestion in the West of Ireland?—I do not admit that.

58303. There is one question I would like to ask you. Say, by-and-bye when this particular work was done, the Estates Commissioners and Congested Districts Board would disappear, and the only Department remaining after the question was settled would be the new Department of Agriculture. They have spent money in building houses and making drains out of State funds for which the ratepayers are responsible. After their disappearance, how are you going to provide for the maintenance of the work done, and seeing that the property does not deteriorate?—At present I don't think there is any machinery for that, but I think, speaking generally, that the incentive which occupiers will have to industry by the fact that their results will be all their own would meet the case. There would be exceptions, and there ought to be some provision made for at least inspecting the farms and seeing that the improvements are maintained. There is no such provision as far as I am aware now.

58304. I mean, take the case of drainage, such as on the Dillon Estate, or as regards the Suck drainage, if

that is allowed to sink down?—I do not think there is any provision just now to deal with cases of the kind. The Congested Districts Board cannot remain for ever on the Dillon Estate; they must proceed elsewhere, and there ought to be provision made for the maintenance of improvements that affect a whole district. Occupiers should be obliged to maintain the improvements on their own holdings so long as they are security to the State.

58305. CHAIRMAN.—In connection with the answer you gave Mr. Kavanagh, I understand from what you said that in your view you favour the claim of the sons of tenants over that of migrants on the ground that, as the county ratepayers are finally responsible for the property, that it was essential to choose the best and most likely men rather than men from the West, who had not perhaps the same principles of agricultural knowledge. But, as a matter of fact, does that danger arise? It is true that the rates have to bear the loss in the last instance, but, supposing you were to put a migrant upon the grass lands in Roscommon, and by bad husbandry he failed to pay, the Government, I think, then turns about and sells his holding, so that the son of the tenant would then have the chance of coming into the land?—If he had the ready money to pay for it.

58306. It is not a question of ready money?—The land is put up for auction, and the purchaser has to pay cash down for the tenant's right. In the meantime the arrears of the annuity will have been levied upon the local rates. Arrears have been levied this year. Once the rates are incurred at all they immediately fall upon the rates, although they are always collected from the occupier.

58307. When it is collected from the occupier there is no element of loss?—There is a certain amount of loss and inconvenience in this way, that the ratepayers are not only the guarantors, but they have also to lend the money. For instance, they have to pay this year the amount of arrears incurred up to the 31st March last year. By the 31st March next year this may be paid to the Government, and the county rates get credit for the amount paid. But in the meantime they have lent it to the Government. They have parted with their money, even though it has to be paid back. The great bulk of the ratepayers are very poor men; for instance, I have shown that sixty per cent. of the agricultural holdings are under £5 valuation.

58308. So long as the Government turned out the man for non-payment of the annuity within a reasonable time the sum that falls on the rates is very small. I believe that in itself would not be a very great objection to the policy of introducing migrants?—No, but the amount will necessarily grow with the larger operations.

58309. If there was anything like wholesale failures to meet annuities by men of that kind I think it might be a strong argument against the policy of migration. But would you not think that until that day would arrive, until it could be shown that these men failed to pay their annuities, that they should not be debarred the chance of showing what they are made of?—I do not think that this difficulty is nearly so great as some people, and I am afraid some members of the Commission, think. I am of opinion that the difficulty has been to some extent created, certainly exaggerated, by the extent to which it has been debated on this Commission and elsewhere. I do not believe the difficulty exists at all to the extent some people appear to think. It exists largely in people's imagination.

58310. Sir JOHN COLOMB.—Do you believe that the difficulties of bringing migrants into Roscommon have been exaggerated?—The difficulties of bringing them from one district to another have. If ten or five years ago a large grass ranch was bought in the centre of the grass ranches of Roscommon, and if people from any place were put upon it there would have been no objection. Now there is a certain amount of objection. The feeling which creates the difficulty has grown by time, but I think it has been assisted in its growth by the extent to which it has been debated in this Commission.

58311. If there is a farm of grass land in Roscommon that has been cleared for the purpose of settlement, you say that if a migrant is brought in from another county and settled upon it, and he fails, the liability is on the ratepayers. On the other hand, if you put on a farmer's son, does the liability disappear?—I don't quite say that. The migrant might be quite as good and as solvent as the son of the tenant, but the presumption is that a strong, vigorous young man, who is prepared to go to America and shoulder his way through the world, is more liable to make good use of the land.

58312. Relatively, that the liability is likely to be less?—Yes.

58313. If a migrant who is brought in owes a year's annuity, and he is turned out—if anybody is turned out it is on the assumption that he fails to pay a year's annuity—I ask you, in that case, is it a real liability at all?—You must recollect that, once it is put up for sale, that it is the tenant's or occupier's interest that is put for sale. This interest, when sold, ought to be worth a good deal more than the amount of his debts due to the Government.

58314. Quite so; but is not that against your argument as to liability on the rates?—Supposing the liability was to be only one year's annuity, the ratepayers are greatly interested in one year's annuity. A year's annuity, if not paid by a considerable number of tenants, would be a very serious matter for the county. Even before the lands are sold the amount due will have been levied off the rates.

58315. The ratepayers would have found one year's annuity, which they would get recouped at the end of the next year. They would have to pay the annuity, and, on the land being bought by another tenant, they are repaid?—One has not to take one particular case. These occupiers will be numbered by the thousands, and if they all, or a considerable number fail, the ratepayers are liable.

58316. If you assume that, must you not assume that all the tenants failed?—Not necessarily. A number may fail this year, and a number the year after, and it might not break the ratepayers. Already the ratepayers, I think, have a pretty fair share of rates to bear.

58317. Does an annuity come on the rates the moment it is overdue?—Yes. This is the first year, I believe, in which it did come on. This year two years' arrears were collected, £70,000, having been stopped from the grants-in-relief of local rates. The arrears so far have been very small, so small apparently that the Government did not bother collecting them from the ratepayers until this year, when they were collecting from the ratepayers the loss incurred by flotation and soforth, and they added to that the amount of the arrears. In the accounts next year the ratepayers will be credited with the amount of arrears which have been paid.

58318. Your objection would cease altogether if the failure of annuity did not come on the rates until the Government actually failed to sell the holding?—It would not, sir. I think my reason for preference is that the son of the tenant would be a more likely man to develop his holding—that he would be a better occupier. That is one reason, and another is that some regard must be had to the popular feeling of the district if the scheme is to be successful. I do not like to take this parochial or county view of it. I would rather that it had not been raised, not from personal reasons, but because I think it is bad from the general public point of view. You cannot force a number of men from one district into another against the wishes of the people of the parish or county where you want to put them. A number of people occupy land which the people in that district need very much. They have been looking for it for years, and one must have some regard for the local feeling and the public peace of the district, otherwise the scheme cannot succeed.

58319. You admit, I suppose, that this Commission was appointed to inquire into congestion, and the methods of relieving congestion. In other words, the uneconomic holders of the West should have their lot improved. Therefore you will agree, I think, that on a question of this kind, a question that so intimately affects the relief of congestion, it would be improper to pass over any feeling which might prevent carrying out a policy for that relief?—Yes.

58320. Again, would you admit that hitherto the demand for the purchase and division of the grass lands put forward has been justified on the grounds that it would be the means of relieving congestion in the West?—Yes.

58321. Does it not therefore come to this, that if you are to say that you cannot force people into a

Oct. 2, 1907.
Mr. John P. Hayden.

locality where their presence is unwelcome, that the future acquisition and division of grass lands is to be defended not for the purpose of the relief of congestion in the West, but for the purpose of providing land for people who have no land at all?—Yes, to some extent

Lieut.-Colonel Wm. Hutcheson Poë, examined.

Lieut.-Colonel Wm. Hutcheson Poë.

58322. Chairman.—You want to make some remarks to the Commission regarding certain evidence already tendered?—Yes, my lord. It has reference to some evidence given at Cookstown and Newry by the Rev. Canon Quin, P.P., and Mr. John Doris.* Canon Quinn is a gentleman for whom I have great regard, and my only object in contradicting his evidence, so to speak, is to show that there are two sides to the question. I have here some tables showing the prices which have been given in the last four or five years by tenants on the estate of Mrs. M. A. Poë, and also cases in which I have exercised the right of pre-emption. The prices which I had to pay, and which were assessed by the Estates Commissioners, will be an answer to the argument put forward by Canon Quinn and Mr. Doris (*produces his tables*).†

58323. I don't suppose you wish to read these?—If I might be allowed I might say that the trend of Canon Quinn's evidence seemed directed towards showing that it was inequitable on the part of the landlord to ask the same number of years in the case of what he called bad land as for good land. I think that does not hold good, as everyone knows rents are fixed in proportion to the quality of the land, and I think the landlord is entitled to get the same number of years for land which has a rent fixed according to its quality as he is entitled to get for good land, that is to say, such a price as would bring in his second term net rental.

58324. Sir Antony MacDonnell.—That contention has been challenged. If a bad farm is allowed to remain out of cultivation for, say, three years, and if a good farm receives similar treatment it is far easier to get the good farm back into the condition in which it was before it was allowed to go out of cultivation. The inherent recuperative qualities of good land are much greater than that of bad land. Consequently a good farm is better than a bad farm even at rents which are relatively equitable?—I admit that. I want to call attention to a case of pre-emption exercised in the case of a bad farm which had been allowed to go into a very backward state. The mortgagee sold his interest, and I exercised the right of pre-emption. The Estate Commissioners came down, and fixed the price which I had to pay for that farm, which had been allowed to go into the most backward state, at 26 years' purchase. In another case I paid 44 years' purchase—for a very small holding, I admit; the rent was only £2 a year, but at the same time the principle applies.

58325. Was there any particular reason for that? Was it a town park or accommodation park?—No. I have given here (*referring to tables*) cases in the last five years where tenants have paid, one to the other, for the interest of their holdings, 25, 35, 42, 43, 44, 63, and 72½ years' purchase. They are not picked out; they are the only sales that have taken place in the last few years. These figures, showing what enormous sums the tenants are prepared to pay, speak for themselves. In this property the agent collects his rents without any trouble, and there has not been a single eviction in twenty years. In the face of those figures it is manifestly, I think, a rather forced argument to say that when we ask that we should be given 24½ years' purchase, such a price as will give the second term net rental, that it is an exorbitant price.

58326. Might I ask you whether those people who purchased at those very high rates were people in the neighbourhood or returned Americans?—No; but in the case of the man who bought at the highest number of years' purchase I know he had a large sum of money sent him from America.

58327. Chairman.—About the point raised by Sir Antony with regard to good and bad land, without going into a discussion as to whether a landlord should get his net income on good or bad land, would you be disposed to agree that the rate of capitalisation might vary? Would you be disposed to think that whereas it might be legitimate for a landlord selling good land to plead that his money should be capitalised at a low rate, say 3½ and that in the case of bad land a higher rate ought to be taken into consideration?—I would also be guided by the manner in which the rent was paid on that land. In this particular case the arrears were £1,600, and they have been reduced without any pressure to £400. In such a case I think the landlord is entitled to say, "My rental is secure, and I am entitled to get such a sum as will when invested, not in favoured securities, but reasonable securities, bring me in that rental."

58328. Now, leave out your property. Of course there are a good many slum holdings in Ireland where the price of tenant-right is really very high, and there are very good reasons for that; but in advances by the State for such land ought it not to be the principle that the money advanced should be based upon the agricultural value of the land, not upon the mere disposition of certain individuals to take the land at a certain price. To put it like this, what in your opinion should govern the security of the State, the inherent agricultural value of the land, which is a real security, or the personal security of a number of people who at a certain price may be prepared to take that land?—The security for the State would be the inherent value. The value of land, however, is determined by the price which it would take in the open market. If you had an open market for the sale of your land then you could see what its value would be.

58329. Is not the high price paid for tenant-right explained by the necessity which compels them to bid against each other for the land, because there is practically no other occupation to which they can turn. It happens to be for the moment that the best thing they can do is to get hold of land; but supposing you have industries starting in these areas might it not be the fashion then for people to devote themselves to industrial life rather than agricultural life. Might not the market for these slum holdings then very much collapse?—That probably would be the effect, but at the same time I think that under present conditions, when the value of the capital sum which the landlord is to receive is taken into consideration, you must be guided, not only by the judicial rent of the holding, but the consideration which one tenant is prepared to pay to another, and which in my opinion represents the true market value.

58330. When the amount to be paid to the landlord is being considered and the rate in which his money was going to be capitalised is being considered, don't you think it would be fair if the State said—You are selling good land, and we agree to give you a sum of money which shall be capitalised at a low rate of interest, which capitalisation shall give you your net income; and they might say to another landlord—You are selling land composed of slum holdings, which cannot be considered as of great agricultural value, and we shall give you a sum of money which shall be capitalised at a higher rate?—To a certain extent you must be influenced by the fact as to whether the rent is well or badly paid. If the rent was badly paid the landlord could not reasonably expect his net income.

58331. Supposing two men are selling land, one in Meath, land which brings him in a net income of £100 a year, and another man in Connemara land which also brings him £100 a year, don't you think it would be fair if they said that the Meath man should be capitalised at a lower rate of interest than the Connemara man?—Yes, I follow your argument, and I think there is something to be said for it.

58332. Sir John Colomb.—I want to know if you can give the rents and valuation in those cases you mentioned in which you exercised pre-emption?—One was a farm of which the valuation was £4 and the second term judicial rent was £2 8*s*. In 1900 I bought that at practically 44 years' purchase. In another case the valuation was £10 10*s*. and the rent £8 10*s*. second term. Pre-emption was exercised in

* See p. 17, q. 35323, and p. 98, q. 37916.
† See Table B., p. 291.

1905, and I had to pay 26 years' purchase. In that particular case about 40 acres were arable, but so badly cultivated that a great deal had gone back to a state of nature.

58333. Take the case of 26 years' purchase, and take the landlord's interest on the basis of 24½ years' purchase, that makes 50½ years' purchase as the dual interest, and in the other case cited by you 68 years' purchase. These illustrations go to show that the interest of the occupier appears to be greater than that of the landlord?—That is what it comes to.

58334. If the dual interest is represented by the landlord being both owner and occupier that illustrates the value of grazing land?—I should think so.

58335. Mr. O'Kelly.—Does a dual interest exist in untenanted land?—Yes, I should say so certainly, because in untenanted land the owner is both the occupier and owner.

58336. That is to say there is a tenant's interest on land on which there is no tenant?—The case I have in my mind is one that has been in the occupation of a tenant. In the lands I have bought I have bought out the tenants' interest.

58337. You, I understand, bought out the tenant's interest, and then the whole interest became one?—Yes.

58338. Chairman.—Then it is not to be deduced from that that where there has never been a tenant that there is a tenant's interest?—No.

Mr. John Fitzgibbon re-examined.*

Mr. John Fitzgibbon.

58339. Chairman.—You wish to supplement your previous evidence?—Yes, my lord, I have been nominated by the County Council. You have already on record my views as to the manner in which future legislation in connection with the settlement of the congested question and the general settlement of the Irish land question ought to proceed, so I do not intend to deal at any considerable length with them now, except the Commission intend to put me any questions pertinent to the evidence of previous witnesses. Mr. Hayden has already dealt with the desirability of having the ratepayers of the county having a voice in the selection of migrants, because the success of the scheme will depend on the class of tenants that are selected, and for that reason the holdings from which it is proposed to migrate them should bear evidence of the fitness of the migrants to manage the farms. I do not ask that the selection should be solely determined by the representatives of the county, but that they should share in the responsibility with the Congested Districts Board.

58340. Sir Antony MacDonnell.—You say that the ratepayers of the county should have a voice in the selection of migrants. How could they exercise an effective voice?—By having a nominated or elected representation from the county on the body responsible for selection.

58341. But what would they know about migrants from Galway?—It should be their business to know.

58342. The Congested Districts Board through its agents would have knowledge of everything concerning the congested districts of Galway. They would have all the information available, and how could a nominated member of the County Council gain any information on the point?—It would be open to him to ascertain.

58343. How could he proceed about it?—He could inquire into the character of the migrants.

58344. From those best able to give him information or by inspecting the holding from which he was to be taken? Supposing there were four or five hundred holdings he would go and make an inquisitorial investigation into each?—Yes.

58345. Do you mean that he should be responsible for the selection of the migrants from the congested districts?—He should share in the responsibility of the work of selection.

58346. Mr. Kavanagh.—And if he approves of them would you approve of them being brought into Roscommon?—Yes. After the needs of the county are settled.

58347. Chairman.—Supposing that there was a feeling of dissatisfaction in a particular county with regard to a policy of migration, and supposing that this feeling was largely owing or to a certain extent due to the ignorance of the people in the county as to the needs of congestion as a whole, don't you think that a strong representative of the county who was a member of the Board, and therefore was able to be fully acquainted with the problem as a whole, not as it affected his locality but as it affected the whole country, don't you think that that man would be more likely to come down and try to persuade his neighbours in his own locality to accept a policy of that kind even against their own prejudices than would be the case if that man was not a member of the Board?—There is a difference of opinion about that.

58348. I want your opinion?—One of the functions of a man nominated by the county on the Board would be, first, take Mayo, for instance, to see that the resources of Mayo were exhausted before migrants are introduced into Roscommon. The introduction of migrants into Roscommon before the resources of the county from which they were brought were exhausted would be resented.

58349. What I meant was this: supposing there was a man much respected and trusted in Roscommon, one upon the Board as a nominee of Roscommon, and supposing that he was aware that a good many of his neighbours were opposed to the introduction of migrants; supposing after his experience on the Board he saw that the relief of congestion as a whole could not be properly effected unless some grass lands in Roscommon were used for migrants, don't you think that man would be listened to by his neighbours if he came down and told them that undoubtedly congestion could only be relieved by looking at the subject from a broad point of view? Don't you think that he would be likely to have some effect with those who are disposed to take a narrow and parochial view?—Well, he might, but outside the Board his influence might be equally great.

58350. Sir Antony MacDonnell.—If you were a nominee?—You might leave that out, Sir Antony.

58351. Sir John Colomb.—Do I understand this, that if the grass lands of Roscommon are appropriated when you have provided for the uneconomic holdings that the balance of the land must be kept until you see whether the Congested Districts Board has exhausted its resources in the other counties—that the balance of land is not to be claimed by farmers' sons or others until it is ascertained whether in the congested counties the land is exhausted?—Yes, that might be done.

58352. Sir Antony MacDonnell.—What, in your opinion, might be done? What would be the policy you would recommend in that case? You are before us a representative of the County Council. Take the case of migrants. An estate in Roscommon on which there is a certain number of uneconomic holdings is bought. The first procedure after purchasing that estate would be to enlarge the uneconomic holdings up to a certain level. Would you then earmark the remainder of the land on that estate for the migrants of other counties?—No, sir. I would deal with the entire problem in Roscommon first. There are thousands of holdings in Roscommon under £5 valuation.

58353. Well, then, you would deal with the uneconomic holdings in Roscommon outside the estate which would be purchased?—Quite so.

58354. Therefore, you would deal with the uneconomic holdings in Roscommon whether scheduled or not?—Yes.

58355. If you had made provision for all the uneconomic holdings in Roscommon and there was spare land, would you ear-mark that land for the other counties? What would you do with that land?—I would hold it.

58356. You would not give it to the sons of tenants?—There are portions of Roscommon that migrants would be very reluctant to go to.

58357. You would not ear-mark that land for migrants?—No.

58358. Holdings up to £5 valuation can be enlarged by the Board when a neighbouring estate is purchased, and what you propose is an enlargement of the present system?—Yes. The Congested Districts Board and the Estates Commissioners should be vested

* For former examination see Appendix to the Fifth Report of the Commission [Cd. 3630, 1907], pp. 140 and 151.

Oct. 2, 1907.

Mr. John Fitzgibbon.

with discretionary powers to make additions to holdings in close proximity to or adjoining untenanted lands, in the case of holdings rated over £10, or even where the valuation exceeds £12 or £14. I know many cases where the area already rated does not exceed 16 statute acres. It is desirable that all congested townlands or districts should be similarly treated, where they have been sold to tenants, no matter what the form of purchase gone through, whether the sales had been effected under previous or recent Land Acts or by direct sale.

58359. CHAIRMAN.—I take it that you would propose to buy all the grass land you could get in Roscommon and hold it. Well, now, may I ask what would be the advantage of doing that if several years were to elapse before you would be in a position to find out how it should be apportioned? Would it not be better to buy grass land only as you wanted it for specific cases you had already decided on?—No.

58360. Just think for a moment. All these advances by the State for land purchase cost a good deal of money, and at present that falls on the ratepayers. Why, then, should you impose a burden on the ratepayers by acquiring more land than you could possibly deal with for several years?—I would purchase all the untenanted land I could get at a reasonable price. Take the Congested Districts Board; it has on hands at present a large quantity of untenanted land which accommodates many people from the congested districts for cattle, and gives them cheap hay, and the holding of that land does not, I am sure, entail loss through the flotation of stock.

58361. The loss on the flotation of stock is far greater than any other loss. Supposing you want £5,000,000 to buy the grass lands in Roscommon, the loss on the flotation of that stock would be very great. Why should you incur that loss on flotation before it is necessary?—Well that is a large sum.

58362. Do you admit that it would be wasteful for the State to go and purchase all the grass lands in Roscommon if they could not possibly deal with it?—If a pre-emption clause were put in in future legislation securing that land for the people, it would then be advisable to proceed with the purchase, and without risk of incurring any great loss to the country.

58363. I do not understand what you mean?—I mean that the land should not be sold except through the public body appointed for the purpose of purchasing these lands.

58364. Sir ANTONY MACDONNELL.—If you had compulsory purchase, would not that be equivalent?—Yes.

58365. Do you recognise that it would not be advantageous to purchase the whole of the untenanted lands in Roscommon in six months?—As fast as you can get them you should purchase.

58366. The State has got to float stock, and the flotation of stock entails a great loss. What is the use of asking the State to incur all that expense, which falls finally on the ratepayers, when you have yet got to make out all this information about migrants, which must take a considerable time. The settlement of Roscommon, no matter how rapidly you go, will take at least five years?—I would say ten years.

58367. What is the use of having the land on your hands?—I would secure the land; you are not called upon to pay for estates the day you purchase them, or for long after. I differ from Mr. Hayden as to the mode of purchase—that is giving the Estates Commissioners the purchasing of the entire lands of Ireland. I would settle on the Congested Districts Board the responsibility of purchasing the land that they would have to deal with. From a business point of view, I think it would work better. It would be practically the same as a business man in purchasing stock. The man who buys it takes an interest in selling it. It would be the best way of dealing with the question, and a wholesome rivalry would be created without friction. The Estates Commissioners would be dealing with other classes of estates in the three other provinces, the Congested Districts Board having the province of Connaught and other congested counties, and there would be no clashing. I regret to have to differ from The O'Conor Don in parts of his evidence.* He put forward the dealings of his respected father with his tenants as a sample of what landlords in general have done. No one will dispute the fact that he was a kind and indulgent landlord, but he was an exception to the rule. When, however, he was disposing of his Clonalis Estate, if he wanted to be friendly to his tenants he should have sold it to the Congested Districts Board. It was the class of estate the Estates Commissioners should not have dealt with. Nothing has been done in the way of improving the position of the tenants, except migrating four of them. The O'Conor Don said that several of his tenants refused to migrate. It is true that some of the tenants refused to go, and for two reasons. First, the quantity of land offered to each was not considered sufficient in size; and, secondly, the annuity to be paid was considered much too high. To my own certain knowledge they were not encouraged by the Estates Commissioners' Inspectors, but, on the contrary, they were told they would get cheaper land if they waited. Some of them now occupy holdings on the Balffe Estate, 30 per cent. cheaper than those obtainable on the Belanagare Estate. They should not have been asked to migrate to the Belanagare Estate in the first instance, as there was on that estate a number of uneconomic holdings needing relief. Instead of migrating some of the small tenants to the untenanted lands there, instead of doing that and having houses erected for them, as the Congested Districts Board would have done, these tenants were helped to a few acres two miles apart from their holdings, with the result that these additional patches will be always grazed upon or used as meadow, as the transit of suitable manure from their homes will be troublesome and inconvenient.

58368. CHAIRMAN.—These questions, of course, are of local interest rather than of general application?—Well, you see it appears in the evidence of The O'Conor Don that the people in the congested districts are not so anxious to migrate, and this is the only opportunity of answering him. The O'Conor Don appears rather alarmed at the disappearance of the grazier. Several reasons can be given to show that his views are wrong in this respect. It will be universally admitted that the grass lands of this county are in need of cultivation. They are not producing within 30 per cent. of what they should, or what they did 30 or 40 years ago. They are rapidly deteriorating. He considers that the breeding of stock would be affected by the graziers not purchasing stores. A man with 20 acres of good Irish land can do with it what the grazier has not succeeded in doing. Some of the new tenants, migrants, have supplied the Castlerea butchers with beef, and one of these was a man who migrated from The O'Conor Don's Estate. The O'Conor Don mentioned that there would be no market for hay if the grazier disappears; but that would be rather a blessing than a misfortune, because when hay does not go to a good price the farmer does not as a rule take it to the market; he gives the land back its produce.

58369. If you break up these grass lands and put people on them how are you going to deal with the difficulty of a water supply? Speaking generally of Roscommon, would it be feasible to create 30 or 40 acre holdings with proper water facilities?—I think so. It is a difficulty, no doubt, in some places, but it is not looked upon as an unsurmountable one.

58370. How do you get over it where there is a great tract of land with only one well or river?—The Irwin Estate was divided among some tenants, and the Estates Commissioners made provision to have a pass for all the tenants to the one water place, and the same was done on the Balffe Estate. Of course one of the greatest difficulties is in regard to fuel. In fact, it is a very urgent question just now, because the Congested Districts Board has houses ready for the migrants, and it will be one of their difficulties to provide these people with fuel. The sooner a shortened route is made to Arigna Coal Mine the better. As a help to peopling the lands of Roscommon I would recommend also the establishment of the compressed peat fuel industry.

58371. Which do you think the better to run the new railway to Arigna or to start the compressed peat industry?—Well, I think both would be necessary. Peat would certainly be necessary. There are bogs in closer proximity.

58372. Carriage on peat would be greater than on coal?—Yes.

58373. It would be the cheapest thing in a grass

* See Appendix to the Seventh Report of the Commission [Cd 3785, 1907], p. 252, q. 41855 *et seq.*

country?—Well the people, of course, are more accustomed to the peat. Migrants, I am sure, would prefer using peat to coal.

58374. Have you ever thought that the increased cost on the carriage of peat would make it more than the price for coal?—No. I have been told that the price would work out the same if the access to the Arigna Coal Mines were easier than what it is. In the matter of drainage I entirely endorse what Mr. Hayden has said. I wish to hand in these figures dealing with the number of uneconomic holdings in certain local electoral divisions (*handed in*).* *Oct. 2, 1907.* Mr. John Fitzgibbon.

Mr. E. W. Sandford-Wills examined.

58375. Chairman.—You are nominated to give evidence on behalf of the landlords?—Yes. I live in a congested district. As regards the cutting up of the grass lands of the county, I think that this should be proceeded with with great caution, as it appears to me that great injury may be done to the small farmers in the congested parts of the county by a wholesale division of the grazing lands, for the following reasons:—The cattle trade may be divided into three stages—the calf stage, the store stock stage, and the fattening stage. The tenants of the tillage lands keep one or two cows and rear calves, in some cases buying calves for the purpose. I have even known cows bought to rear the calves. These calves the following year are put out to grass for the summer months, and in the autumn following are sold to the holders of store cattle lands, who keep them for a time, and then pass them on to the holders of fattening lands. Now, if these grass lands are cut up, and migrants from the congested area are planted on them, the result, it appears to me, will be that there will be an increase in the production of calves and a greatly restricted market for the store stock at eighteen months and two years old. There will also be a large number of young stock produced on the grass lands that are cut up. In this way not only will the existing market for store stock be cut off, but a rival factory will be instituted. The greater part of the grass lands of this county are not suited for carrying a close population, as they are not suitable for tillage, and are a long way from turf, besides being very poorly supplied with water. Even in the lands that are best suited for tillage, in the parts where tillage is now and has been carried on, and where the best crops are now grown, the tendency is to till less and less, and put the land more and more under grass. The natural expectation then would be that, on the stiffer lands, not so well adapted for cultivation or so easily worked, the method pursued would most likely be continual meadowing and the production of store stock. As a proof of the tendency to till less I would point to the market in Castlerea, where the amount of produce now sold is not half what it used to be some 25 years ago. There is no great desire among the people in the district in which I live to migrate to new holdings in the grass lands, and the introduction of migrants from more remote districts would be the cause of a great deal of ill-feeling and jealousy. One man said to me: "I hold 14 acres where I am, and I would not give it up for the best 40 acres of land in the county."

58376. Mr. Kavanagh.—But there is a difference between a holding of fourteen acres and one of five?—Yes.

58377. Supposing he had only five acres it would be a different matter with him?—Oh, well, perhaps. The cattle trade is one of the mainstays of the farming community, and has fallen into certain lines, which experience has pointed out as the best. It would, therefore, be doing a great injury to the country in general if any line of action which might throw that trade out of its natural course were entered upon hurriedly and without the most careful consideration. A great deal of good work has been, and is still being done, by the Parish Committees under the Congested Districts Board. In the parish in which I live there is a great improvement in buildings where the occupiers have had grants in aid, both in dwelling-houses and out-offices, new roofs being put on and new cow-houses and stables built, and other improvements made. I think that a good deal more might be done if the Board had more funds at its command to be dispensed by the Parish Committees, who, if they had the funds, could give grants in aid for the purpose of scouring existing main drains, and effecting other improvements. I think, however, if this were done it would be necessary to have legislation for the purpose of compelling the people benefited to maintain the drains when put in order. Otherwise I fear that in a great many cases the drains will in a few years' time become choked, and the trouble be as bad as ever. There is a case of that in my neighbourhood. A man would not do his share, and all the rest of the people had to suffer in consequence. I think it would be a great loss to the congested districts if the Board, which has done so much good work, were disestablished, and its work handed over to another Department. Giving the small farmer the means of improving his stock by putting within his reach good sires, bulls, horses, asses, boars, and, I may add, rams and goats, is conferring a great boon. There used to be a depot for them at Loughglynn. Good sires mean improved stock, and improved stock means increased wealth. In conclusion, I would again say go cautiously in the matter of breaking up the grass lands, and do all that can be done towards improving the existing state of the small farmer. I think migrants introduced to this side, where land is hard to work, would not resort to tillage. That is shown by what is done in the vicinity of Castlerea. In one townland divided into something like twenty-acre holdings over eighteen months ago there is practically no tillage. It is all grass wherever you go. Mr. E. W. Sandford-Wills.

53378. Sir Antony MacDonnell.—Is the restriction in tillage to which you refer due to paucity of labour or what?—I think it is not due to scarcity of labour, but to the fact that the occupiers of the holdings find that they can do better by less tillage. They are doing more in the way of cattle rearing and less in the way of tillage, because they find that they work their holdings in that way with very much less expense and trouble to themselves.

58379. Mr. Kavanagh.—Would you not say that the grass lands are getting worse and worse under the grazing system?—I do not think so.

58380. In parts of Galway I have seen it going back to nature?—In the heart of this county it is not so; the land is good. As to migration my experience is that while each man is quite ready that his neighbour should go he does not want to be transferred himself.

58381. Would they not go in colonies?—I could not say that; each man wants his neighbour to go, but not himself.

58382. But they emigrate without compulsion?—They emigrate because they have friends on the other side, who pay their fares and bring them out. In moving a tenant it will be necessary to make a complete move and not merely give a piece of grass land in addition to a holding already occupied, and also to provide against sub-division. Otherwise in the next generation there will be two holdings in place of one, and the cure will result in making the disease worse.

Mr. Martin Concannon examined.

58383. Chairman.—You are nominated by the Castlerea Rural District Council?—Yes. I have not much to say. Where I live is congested. Thirty-six families in the parish, numbering 136 people, live on 86 acres of bogland. Twelve other families live on fifty acres of a by-road, though this locality is not scheduled as congested. Some people seem to think that we in Roscommon are not congested at all. I have travelled a great part of Mayo and several other counties, and can say for a fact that there are many families living in Roscommon as poor as any in any other county. The twelve families Mr. Martin Concannon.

* See page 292.

Oct. 2, 1907.

Mr Martin Concannon.

to whom I have referred live together, as if they were in a block in a town, and hold their land in common. They have been repeatedly summoned because of their places being unsanitary. Their way of living is about the hardest of the hard, and if it was within your reach you should see this place.

58384. Mr. O'KELLY.—What is the name of the place?—Ballintubber

58385. It is not scheduled as congested, but it is congested as a matter of fact?—It is not scheduled.

58386. The reason it is not scheduled is because it is contiguous to a large number of grazing ranches?—There are hundreds of acres on each side of their houses, and they can only look at them.

58387. Sir JOHN COLOMB.—Are you a farmer?—In a small way.

58388. What is your acreage?—15½ acres, valuation £14 10*s* On the 15 acres I have 3½ acres of arable land. I have eleven acres of bog which will not grow anything. I have spent £47 15*s*. for grass manures during the last thirteen years and glad I was to get it. Before that I was forced to go to three conacre fields when I had no one only myself. I used to have meadow here at the poor-house above.

58389. Sir ANTONY MACDONNELL.—Why would not you break up any of your land?—Because I would have nothing to feed my cow or my calf either in the winter time. Bog hay is not much good for animals. It may keep them from dying, but they won't improve on it.

58390. If you had a good holding of thirty acres what would you do?—I will tell you what I would do. First, I should tell you I should have a little capital. It would be a wrong thing to give me thirty acres with nothing to work it with. The first thing I would do if I had thirty acres would be to enclose four acres for tillage, for a start.

58391. Out of thirty?—For a start. The next thing I would do is enclose about that much more for meadow. I would pasture the rest. I have a great belief that we living in the country cannot live without tillage, but it is the worst of the land we have to till—and, I tell you the fair truth, for I have good experience, and I am a good age now, and I often had two acres of potatoes sown, and this very year I have them sown, and, thank God, this year they escaped the early summer frost, but many years I had the same complement, and it might happen to be in June or the early days of July the will of Providence that one little night's frost sweeps my two acres of potatoes away. All my class is living on the boglands, and we are asked why don't we till more. We have not the land to till. Why, I would sooner have to-morrow 16½ acres of the worst clay land under Heaven than all the bogland that I have, because you are not sure. You are toiling all your years, and even when you are successful the produce of what is in the bog is not up to much.

Mr. Cox Cotton examined.

Mr. Cox Cotton.

58392. CHAIRMAN.—I see from your precis that your first point is the reason why occupiers of land in Roscommon are graziers?—Yes. In almost all the leases and agreements between landlords and tenants penal clauses prevented the occupier from building, also from converting into tillage. Had it not been for these clauses houses would have been built and many of the farms have been tilled. Owing to these clauses graziers had in many instances to reside on very small farms. Grazing was looked on as a legitimate business and laws enacted to make agreements between landlords and tenants binding.

58393. Sir JOHN COLOMB.—Do you mean clauses inserted in agreements between landlords and tenants?—In one of my agreements even where I reside I am bound not to till more than ten acres of land.

58394. CHAIRMAN.—I suppose that was because the landlords were afraid that if tillage was resorted to the rich pasture lands would be broken up?—Yes, and that they were more valuable as they were.

58395. Mr. KAVANAGH.—Why was there a clause against building?—It was presumed that these lands should be kept as grazing lands, and that if you went to build you would be likely to till.

58396. When were these leases made?—I have a lease of land that was made to my father in 1858. In that lease there are clauses preventing more than four acres being tilled and that for a herd's garden.

58397. Mr. BRYCE.—Four acres out of how many?—There were 252 Irish acres on the farm. Evidently the intention was not to allow him to till

58398. Mr. SUTHERLAND.—You say that laws were enacted to make such agreements binding: do you refer to Acts of Parliament?—Yes. There were Acts of Parliament that made all these leases and agreements binding, and these penal clauses were very frequently put into execution where the agreements were broken. Most of the good grazing land in the centre of South Roscommon is deep, cold clay, late in growth. The tillage on land of similar class in England had to be abandoned as uneconomic.

58399. Can you give us some of the localities in England where that occurred?—Take the deep clay of Leicestershire and other places where there is deep clay. I have not had much experience of England except going through from one place to another in the train, but I know it from reading of it. Some years ago I believe that some of the stiff lands in England could be got for very little.

58400. Mr. BRYCE.—In Essex, for instance?—I could not locate it, but I believe it is a fact.

Mr. SUTHERLAND.—I have heard of it for the first time, and I thought I knew the conditions in England pretty well that land has gone out of cultivation there for the same reasons that you assign as applying to Ireland.

58402. Sir JOHN COLOMB.—It is the case in Cheshire, Leicestershire, and a few other counties by reason of the soil being of the same nature?—Yes. In the district referred to there are not bogs and very bad water. The potatoes grown in the district are almost unfit for food. The oats neither fill nor ripen properly. I have been riding to hounds when the hounds ran through the green oats, coming towards Christmas, more than once.

58403. Mr. SUTHERLAND.—What particular part do you refer to in this neighbourhood? Is it between here and Athlone?—No. It would be within three miles of this town. I could make a parallelogram by the roads.

58404. As we passed along in the train we saw large fields of beautiful ripe oats?—Yes. That would be in the neighbourhood of Athlone, between Athlone and Roscommon. That is the best part of Roscommon for ripening land, and for crops, but beyond this, where Major Balfe lives, there is a road runs from that to Rathcroghan, where the Congested Districts Board have acquired a good deal of land.

58405. These were scattered fields in the middle of large grass fields?—In what district?

58406. Sir ANTONY MACDONNELL.—Between Ballymoe and Roscommon, passing by Donamon?—That part of the country and on the borders would be outside the square I speak of. It would be bounded in this way. Go three miles from this town, near Major Balfe's place, there are cross roads. The road runs straight by Rathmoyle until it goes to the cross roads of Rathcroghan, where the Congested Districts Board have acquired a good deal of land. It is bounded on the west and on the north by the road from Rathcroghan through the village of Tulsk to a place called Clashaganny. For the reasons that I have given the few resident occupiers and herds grow only very small patches of crops, finding it uneconomic to to so. My next point is relative to the tenure of land. On a great many estates leases were not given. There was an honourable understanding that so long as a tenant paid his rent he was left in possession. On this understanding farms have been held by the same families for over forty years and are still held. Had it been in the North of Ireland they would have come under the "Ulster Custom." Such lands are misnamed untenanted. When these estates are bought by either the Estates Commissioners or the Congested Districts Board, as the law at present stands the occupiers have to go without compensation, which, in many cases, will mean ruin to those who held the land during their lives. As an example, John L. Cotton, of Longford House, Castlerea, holds

a farm on the Pollock Estate for thirty-eight years. Since the expiration of his lease he is a yearly tenant. The agent on the estate has served him with notice to quit, writing to say he did so because the Estates Commissioners required the land. There is no mention of compensation for him, not even as much as would enable him to emigrate in his old age.

58407. Mr. O'KELLY.—Why should not the landlord compensate him and not the Estates Commissioners?—I don't suppose the man would have the slightest objection to the landlord compensating him, or you either.

58408. What claim had he on the Estates Commissioners or the Congested Districts Board?—He does not make any claim on them. I just put forward the case whether the Government think he should be put out without any compensation. I have here the letter of the agent in which he sends him notice to quit.

58409. CHAIRMAN.—These were what they call parole agreements?—No. The land was held under lease for twenty-one years. Since the lease expired the tenant was left on. He paid his rent, and the agent accepted it. There was nothing more about it until he got the letter—a rather friendly letter.

58410. Mr. O'KELLY.—Is not the whole thing between the landlord on the one hand and the tenant on the other. Suppose the landlord wished to evict Mr. Cotton, the Estates Commissioners not having interfered, could not he have done so?—Yes, but on his own telling he had no notion of evicting him if he had not sold to the State.

58411. He is making a better bargain with the Estates Commissioners?—What I claim is that these men have a right to be compensated.

58412. If the landlord is so very sympathetic with the man for having to do that let him translate his sympathy into something more substantial?—The landlord is not so sympathetic. The mortgagees are the landlords. The agent is acting for creditors. He writes:—"Dear Sir,—The notice of surrender sent herewith is in contemplation of the sale of the mortgagees' estate to the tenants through the Estates Commissioners under the new Land Act. Should we not be able to carry out the sale we shall be glad if you keep the lands as heretofore. Yours faithfully, John L. Lambert."

58413. CHAIRMAN.—You yourself are a grazier on a large scale?—Yes; a fairly large scale.

58414. How many acres do you graze?—Between 400 and 500 Irish acres.

58415. You hold them under the 11 months' system?—Not one inch, I am thankful to say. I have a judicial lease, and I have a farm of 120 statute acres which I purchased eighteen years ago under the Ashbourne Act, and where I reside. I have signed an agreement for it.

58416. You don't graze on the 11 months' system at all?—I hold no land on the 11 months' system. I am one of the oldest graziers, I suppose, in the county, and I know as much of the tenure of the land as anyone, and as much of the grazing land of the county as, I suppose, a horse could put a foot down on.

58417. Do you hold much land from year to year?—I hold no land only what I have under judicial lease or what I purchased 17½ years ago under the Ashbourne Act, and where I reside I have arranged for the purchase of it, and it is going through in the usual form at present, and there are some other large farms that I have a judicial lease of. As the law exists at present I am pretty safe, and for that reason I feel more for those who are not.

58418. Mr. O'KELLY.—How many acres are on the home farm?—Almost 100 Irish acres.

58419. Are the other two farms you hold under judicial lease close to the home farm?—One farm is only separated by a few hundred yards, though it is a couple of miles around by the road.

58420. How far away is the other farm from the home farm?—As the crow flies it would be four miles, but it is six or seven by the road.

58421. Do you stock the farm seven miles away yourself?—Yes. I stock all the lands.

58422. You would not like to hear it described as a non-residential farm?—It is. In many cases men who have held land during their lives have been induced by getting reductions in their rent to sign agreements which make them eleven months men. This system was the creation of solicitors and agents to deprive the occupier of the benefit of any Land Act that might be passed. My next point is compensation for disturbance. I suggest that your Commission should recommend that tenants whose leases have expired and held on since as yearly tenants, also those who held in the way I described as an honourable understanding and have been turned into eleven months' men, should get a portion of their land to buy and compensation for disturbance for what has been taken from them. The landlord is allowed to buy a portion of his estate, the agent is paid commission, and the herd very properly gets a portion of the land, and are the men who led useful lives, paying a large amount of the taxes of the county, to be left to end their lives in penury by an Act of the British Government? It has always been the practice of that Government when they abolish an office to compensate the holder. Even when abolishing slavery in the West Indies they compensated the slave owner to the amount of £20,000,000 sterling. I have no doubt if compensation is given and prompt payment of it, that it will tend to the peace of the country, as more land would be available for division without compulsion. If the State consider it for the benefit of the community to divide the land certainly the occupier should be compensated from the Treasury of the State. When fixing the compensation it should be taken into account that owing to the various causes brought about by the Act of 1903 there is no open market for the sale of land. The next matter is migration. Roscommon should not have migrants brought from other counties at least until residents in the county were first attended to. Each county should be made to relieve its own congestion. There is more grazing land in Mayo and Galway than in Roscommon. It is much more suitable for tillage, and fuel is more abundant. Migrants would have no chance of getting turf in this county. When Mr. Doran advocated migration to Roscommon on such a large scale I believe he was carried past his judgment by enthusiasm for the cause with which he is so closely identified. He certainly must not have compared the crops of the respective counties. I had a good opportunity of comparing the crops of Roscommon and Mayo, as in the year 1891 I was sent by the Land Commission to inspect and report on the potato crop of both counties and while so doing saw the other crops, and was astonished at the yield in Mayo compared to Roscommon. If a capable man is sent as an expert to compare the crops of these counties and give you his evidence, it would be a great assistance to you. The next question is would it be economic to break up all the grazing land? It would not. The quantity given is not sufficient to enable the occupier to hold on his young cattle for beef or for forward stores for the English or Scotch markets. It takes from four to five statute acres to feed a "sum" summer and winter, and from that it is evident that (even should the occupier not have to dispose of any of his flock to meet his engagements) unless food was bought he could not keep on his succession. Unless a number of the graziers remain to buy the young stock, and more particularly if Canadian stores are admitted, it will be impossible for the peasant proprietor to support his family and pay his instalments. The grazier and small holders have been a mutual benefit to each other, one rearing the cattle, the other buying and feeding them to an age when they were fit for fattening. Also the small holders had the use of the high-priced Roscommon rams owned by the graziers free of charge. Those sheep have now a world-wide reputation for improving other breeds and will be in danger of becoming extinct. Horse-breeding will also get a check, and the splendid hunters and army remounts will become very scarce, as without the grazier to buy the foals it will be uneconomic for small farmers to breed them, as it is necessary for young horses to have wide runs to develop them and make them active. The breeder always found a ready purchaser for his foal at the remunerative price of from twelve to twenty pounds each. So with the extinction of the grazier another great industry will suffer. Mr. Doran does not seem to have taken these facts into account when he tried to brand the grazier as a useless member of the community, who by his autocratic power should be cut down as a cumberer of the ground. We have not the full statistics showing how the prices of cattle ranged when the country was more populous, but as it happens, my father was a grazier in this county, and this (*produces book*)

Oct. 2, 1907.

Mr. Cox Cotton.

is a fair book which I have found in his papers. The date is May, 1850.

58423. Sir ANTONY MACDONNELL.—Does it give the prices at the fair?—Yes, the prices of cattle in May, 1850, at the fair of Strokestown. I found this in my father's desk. Cattle bought at the fair of Strokestown in May, 1850, for the farm of Carnagat: 25 two-year-old heifers at £4 each—and I may remark that he was a man who was always buying young cattle—1 three-year-old, £5. It goes on then to yearlings. The first yearlings he has down are: £1 7*s.*, £1 3*s.*, and two at £1 each. Then there is £1 10*s.* The highest price for yearlings evidently was £2. The lowest was £1. In other words, according to this, he bought 38 beasts at the fair of Strokestown for £121 6*s.* 6*d.* At the fair of Frenchpark, which was a more congested district, I find on the 21st of May, a few days afterwards, he bought 15 yearling bullocks. The highest price was £1 12*s.* 6*d.* He bought two at 17*s.* 6*d.* each. He bought the 15 for £19 16*s.*

58424. Did he buy any two-year-olds at Frenchpark?—Not according to this. The highest price for a beast was £5 for one three-year-old heifer. He often told me about these things. I hunted through his papers, and I found that this was all transferred to his ledger.

58425. Can you give us the price this year? Have you bought any two-year-olds this year?—Yes. Those prices are all collected by the Agricultural Department, and I happen to be the collector in the district. The statistics are all in the hands of the Government. Speaking from memory, the price of average two-year-old heifers at the fair of Strokestown to-day would be £11.

58426. At present?—In May last. We are speaking of May. They range from £12 10*s.* to £10 and £9 10*s.*, but the medium price would be about £11. The statistics of all these things have been collected for the last twenty years.

58427. What do you deduce from all that?—I was born in 1844, and was born a grazier and taken home from school very young to assist; and according to what my father told me frequently the upshot of this was that when the calves were dropped they were sold. There was scarcely a bullock calf over a year. They were sold at prices varying from 5*s.* to 2*s.* 6*d.*, which, of course, was more economic than to keep it for a year at these prices. That brought it up by degrees. The population then was so very large.

58428. Has the rent of grazing land increased proportionately?—The rent of the farm on which these cattle were fed at that time was about 28*s.* an Irish acre.

58429. What is it now?—It is now 32*s.* an Irish acre. That is an exceptional case. My father had that farm in 1858 when things began to rise. He gave the landlord £500, and the landlord gave him a long lease for a slight rise.

58430. Am I to infer that there has been no such rise in the price of land as there has been in the price of stock?—There was, because that farm I refer to has been a good part of the time £3, or perhaps more.

58431. The rents for some years past have been falling?—No. The rent fell off in 1878. The rent of these lands fell off in seven or eight years from these enormous prices to nearly half, and that has been pretty steady since 1882 or 1883.

58432. Mr. SUTHERLAND.—The graziers then must have made large fortunes if the price of land went up only 50 per cent., and the price of cattle went up 300 or 400 per cent.?—No, because the price of the store cattle went up so very much also in proportion. I went over fifteen years of the statistics some years ago in this witness-box. I was examined by Judge Fitzgerald in an appeal case, and I showed him that the year-old cattle were a good deal out of proportion to the price of the two-year-old now. I cannot carry it all in my head, but the statistics will show that that is so. I hold here in my hand the Small Holdings Allotment Act of 1907. A short paragraph states: When a labourer has been regularly employed on any land acquired by the County Council for small holdings, and has proved to the satisfaction of the County Council that the effect of the Act has deprived him of employment, and no employment of an equally beneficial character is available in the locality, the County Council may pay him such compensation as they think fit. In the same way a labourer who requires to be compensated may go to the County Council. I give that as a precedent.

58433. Mr. O'KELLY.—Suppose the landlord himself wished to terminate a tenancy, and the matter had no relation whatever to intervention by the Congested Districts Board or the Estates Commissioners, would you say that the tenant to be evicted should ask for compensation from the landlord?—In a great many of these cases there was an honourable understanding that as long as he paid the rent he was not to be disturbed. Even on the Pollock estate he acknowledged as much, because he said, "If the Estates Commissioners don't, but we will be glad to have you again."

58434. When a landlord finds it to his interest to dispose of the property, should not the honourable understanding take the form of compensation from the landlord for disturbance?—I think that neither landlord nor incoming tenant should lose. My idea, whatever it is worth, is that if it is for the benefit of the community the State should pay it.

58435. There is no compulsion in that matter?—There is in this way, that they say, "We want to buy this estate, but unless we get the grazing land we won't buy."

58436. It might be the other way round. The landlord might go to the Estates Commissioners and say, "I want to sell my property?"—I don't think even the United Irish League would deny that the grazier should be compensated. They don't think a man should be sent to the workhouse to be a charge on the rates.

58437. Would the United Irish League say that the compensation should be saddled on the annuities of the incoming tenants?—No. I don't say that. There should be a grant from the Treasury.

Mr. O'KELLY.—If you get it out of the Treasury, I don't object.

58438. Sir JOHN COLOMB.—Taking Mr. O'Kelly's point that the landlord should pay compensation, would not that add to the total amount to be paid by the tenants in their purchase prices?—I would consider that it should be reasonable.

58439. May it not be possible that the objection of some landlords to sell means that if they sell at a purchase price to get their net income they are inflicting an injury on men with whom they have an honourable understanding?—I have not the slightest doubt of it. On plenty of these estates there was an honourable understanding between the landlord and tenant that as long as the tenant paid the rent he should not be disturbed.

Mr. PATRICK WEBB examined.

Mr. Patrick Webb.

58440. CHAIRMAN.—You live in Loughglynn?—Yes. I have a fair experience of living under the Board on the Dillon estate, seven years, and as far as the two Boards are concerned, I think that competition between them should be done away with. I have experience myself in the case of estates on the market where members of both Boards have approached men of influence so as to get the estates transferred to one or the other.

58441. Sir ANTONY MACDONNELL.—What do you mean?—Men from the Congested Districts Board and the Estates Commissioners approached certain men to my own knowledge, such as county councillors, and men who took a prominent part in the agitation, myself included, so that they would sanction in one direction the Congested Districts Board, and in the other the Estates Commissioners.

58442. What sanction could they give?—Sanction them as purchasers. On these grounds it is my belief that the price of estates has been raised, particularly the price of the De Freyne estate.

58443. I have not yet got quite into my head what you mean. Take a concrete instance, say a particular estate that the Congested Districts Board wanted to buy. Do you mean to say that a member of the Congested Districts Board approached you in the particular case you mention with the object of inducing you to sanction the arrangement?—To use

my influence with the tenants to sanction the Congested Districts Board as purchasers.

58444. To use your influence with the tenants to apply to the Congested Districts Board to become purchasers?—Yes.

58445. That is to say, to memorialise the Congested Districts Board?—Yes.

58446. Then it would be a case in which the Congested Districts Board wished to buy, that the member of the Congested Districts Board applied to you with the view of your influencing the tenants to get up a memorial to present it to the Congested Districts Board in order to buy?—Yes.

58447. If the Congested Districts Board were forwarding the purchase, if they were actually engaged upon the purchase, what would be the advantage of such a proposal as that?—On the other hand a representative member of the Estates Commissioners also approached me for the same purpose.

58448. A member of the Estates Commissioners approached you with the object of your influencing the tenants to present a memorial that the estate should be purchased by the Estates Commissioners and not by the Congested Districts Board?—Yes.

58449. CHAIRMAN.—The same estate?—Yes, and our opinion is that, having this competition in the market for these estates raises the price of these estates in the market.

58450. Mr. BRYCE.—What estate was that?—The De Freyne estate, and the Murphy estate.

58451. Mr. O'KELLY.—Do you mean one of the Estates Commissioners or their representative?—I mean their representative.

58452. Sir ANTONY MACDONNELL.—Would you give the name?—I would not like to.

58453. Would you be surprised to hear that Lord De Freyne proposed to me to purchase his estate, and that Mr. Murphy proposed to me to purchase his estate?—I would not.

58454. Did I ever move you, Mr. Webb?—You never wrote me a scrawl.

58455. The purchase of the De Freyne estate and the purchase of the Murphy estate was negotiated through me?—Never a line, but a gentleman approached myself to try to get the estate sold.

58456. You make a very serious charge in those two cases, the De Freyne estate and the Murphy estate, and I think you are labouring under a very great misapprehension?—I don't think I am.

58457. Surely I am justified in asking you to mention names if you make this charge, because if you don't you expose yourself to the possibility of being doubted?—In that case if you give me a guarantee that there will be no injury to the officer I will name him.

58458. Mr. O'KELLY.—Did Mr. Doran ever ask you?—No.

58459. Sir ANTONY MACDONNELL.—Who is the official?—If it will not injure him I will name him.

58460. I cannot give you any guarantee?—In that case I would not name him. He is still under the Board, a prominent official.

58461. You have also mentioned that one of the Estates Commissioners approached you?—No, his representative.

58462. I really think if you knew all the facts you would find you are labouring under a misapprehension?—I am not. It is on these grounds that we want to have only one or other of the bodies.

58463. Sir JOHN COLOMB.—Could you give us the dates on which you were definitely approached by someone in each case?—It would be between three and six months previous to the De Freyne case being carried through.

58464. What was your position then?—I was county councillor and a district councillor then, and one of the men who took a foremost part in the agitation.

58465. Mr. KAVANAGH.—What answer did you give these people?—The answer I gave was that I would not interfere one way or another.

58466. Sir JOHN COLOMB.—Did they simultaneously approach you?—Yes.

58467. On the same day?—No. They knew Lord De Freyne made me an offer in behalf of the tenants, of 7*s.* in the £ on first, and 5*s.* on second term rents.

58468. Sir ANTONY MACDONNELL.—The truth of the matter was that the De Freyne transaction, and the principles on which the De Freyne estate was bought, were settled by me with Lord De Freyne before any member of the Congested Districts Board, except certain members whom I consulted, knew anything at all about it, and before any of the officials of the Board knew anything at all about it?—Whether it was or not, a representative of the Congested Districts Board approached me.

58469. It was not Mr. Doran?—No.

58470. Mr. O'KELLY.—Did he come to Loughglinn?—Into my own house. I was offered purchase. The terms Lord De Freyne offered myself on behalf of the tenants——

58471. Did this gentleman come to you, and say, "I have been deputed by the Congested Districts Board to consult with you as to the sale of the De Freyne Estate"?—No.

58472. What did he say to you? Did he come as a plenipotentiary?—He said the Congested Districts Board were most anxious to purchase the De Freyne Estate, and had also got to learn that the Estates Commissioners were most anxious; and if I could induce the tenants to sanction the Congested Districts Board it would place him in a very responsible position.

58473. What year was that?—About three months previous to the announcement of the sale.

58474. Sir JOHN COLOMB.—Did the same person ask you for both?—Not the same person.

58475. CHAIRMAN.—There seems to be a very keen market for land now?—Yes. That is why we want one purchasing body.

58476. In a keen market like that prices should be very good?—Yes. You will find that in the cattle trade it is the same.

58477. Sir ANTONY MACDONNELL.—I think you will find that the person who approached you was really the fly on the wheel in all these transactions. He had as little influence with the Congested Districts Board as with the Estates Commissioners, and as little with the Estates Commissioners as with the Congested Districts Board?—That might be.

58478. Probably he would never venture to make a suggestion to either body. He would find himself in the wrong box if he did?—So much so indeed that he advocated persuading the tenants as well as we could, seeing the great improvements on the Dillon Estate, to sanction the Congested Districts Board. That is one of the reasons why I wish the Estates Commissioners as the purchasing body, to avoid competition; but I do not sanction the Congested Districts Board apportioning the land nor collecting the rents. I will give you my grounds. I would approve of the Estates Commissioners being the purchasers, fixing the annuities, and apportioning the lands, and leaving it to the Congested Districts Board to carry out improvements.

58479. Sir ANTONY MACDONNELL.—How, possibly, could the land be distributed until it was improved? Take the case of an estate in rundale. How could it be distributed until the holdings had been consolidated and striped?—I would sanction the Estates Commissioners striping the lands, and letting the Congested Districts Board carry out the improvements.

58480. Mr. BRYCE.—Why do you make these distinctions?—I have cases I can point to on the Dillon Estate of people who, having from sixteen to twenty acres of land, have got seven acres of good land additional; while tenants holding only one, two, or three acres have got none.

58481. Your reason is you think that the Congested Districts Board officials are partial to certain people?—That is my opinion.

58482. That they have favoured certain rich tenants to the disadvantage of the poor tenants?—I will give you the names of the tenants.

58483. Of the favoured tenants?—Yes.

58484. And those who were made to suffer a disadvantage?—Yes.

58485. Sir JOHN COLOMB.—Do I understand you to say that you charge the Congested Districts Board officials with favouritism?—Yes.

58486. Distinctly?—Distinctly. I will give you the names if you wish.

58487. Sir ANTONY MACDONNELL.—Give the names and the lands?—Take the village of Aughalower. A gentleman there named Mr. Creighton held a double holding of about sixteen acres of the prime of the land of Aughalower. When the Congested Districts

Oct. 2, 1907.

Mr. Patrick Wobb.

Board came into Aughalower the farms were apportioned, and this gentleman was one of the first tenants to get land, and he got between six and seven acres, so that he got a good holding.

58488. In addition to the sixteen acres?—Yes. In the village of Loughglynn there are four tenants holding one acre of arable land and one acre of bog.

58489. Give their names?—Peter Gilligan, Michael Brady, Thomas Fitzpatrick, and Francis Duigenan

58490. You say they have been overlooked altogether?—Yes.

58491. Did Francis Duigenan get a holding?—Yes.

58492. Did he give the holding over to you?—No.

Mr. Doran.—Perhaps I will be allowed to answer these new cases afterwards?

58493. Sir ANTONY MACDONNELL.—Yes?—I have neither charge nor claim to the old holding he has.

58494. He did not give over to you the holding which he has got?—Never. We are now building a barrack in the town of Loughglynn. Father O'Hara passed not long ago, and wanted to know whether it was a workhouse or an asylum we were building. I suppose the present cost would be between £1,000 and £1,200.

58495. CHAIRMAN.—That has got nothing to do with us?—I was going to tell you the reason. There is still the old barrack, that could accommodate twelve or thirteen policemen in the troubled times, when they might be required. Why should this barrack be built now? This barrack is being built at the expense of the Board, and they have handed over the old mansion with twenty acres of land at the end of the demesne to one of the Board's officials.

58496. Who is the Board's official?—Mr O'Connor. It might be said he gave up land in return for the lands he is after getting under the Board, but that was a plot he grabbed in Loughglynn at the time of the eviction of Mr. Hussey. He just got the plot as an excuse to hand over in return for what he is getting. I hope you will inquire into this, so that you may see whether what I say is correct or not.

58497. Sir ANTONY MACDONNELL.—It will be inquired into, as you mention. I know that the Board's money in building the police barrack is pretty well secured. We did not agree to spend it until this was done?—Neither you nor any member of this Commission blame me for bringing this forward. I had intended to bring it forward in the House of Commons if I was not heard here.

58498. Mr. BRYCE.—How far do you think you are expressing the opinion of the tenants in the district?—They have sent me here to express their opinion.

58499. Can you show any written authority from the tenants to represent them?—I am giving you the names of the tenants.

58500. Can you show me any authority?—I showed the authority of 1,400 people when I opposed the game question, and when I succeeded in winning the game question for the tenants on the Dillon Estate.

58501. That does not concern us here?—I hope the game will be vested in the tenants.

58502. What is the authority you have for speaking in the name of the tenants on the estate?—They sent me here.

58503. Can you refer me to any meeting of the tenants or show me any resolution appointing you?—Yes. I give you my word; I can forward it here. I could go into personal matters if your lordship wished to hear it, and you will find that I have got a grievance. I hold lands on the De Freyne Estate and the Dillon Estate. For the first year, 1902, I got the June reduction of 6*s.* 8*d.* in the £, as all the other tenants did. I did not ask for it for myself. I built some houses with my own money. There were four widow women, who thought they were badly treated by the Board, as far as the division of land is concerned. They came to me, and I wrote to Mr. Doran pointing out the grievance, as they stated it to me. Mr. Doran wrote back to say that there were sufficient officials to carry out the duties of the Board without my interference. I wrote back to say that it was not as an official I wrote but as a representative of the people, but that justice should be done.

58504. Sir ANTONY MACDONNELL.—Could you give me the names?—Mrs. Moore, Mrs. Rush, and Mrs. Duigenan. The other is dead—she was also a Mrs. Rush. The result was I wrote to Mr. Wyndham and wrote to the Board, and those poor women got land attached to their holdings afterwards. Then the reduction was refused to me which was given to all the other tenants.

58505. Was there any explanation given of the refusal?—Yes; and the Department can send it on to you if you wish.

58506. I will take your explanation for it?—I wrote to the secretary of the Board. He wrote me back. He said that owing to the attitude I took up against Mr. Doran on behalf of the people they could not see their way to interfere.

58507. Was that the explanation?—That was the explanation. I have it in writing. I will send it on to you. The result was that I refused to pay, and they served me with six processes of ejectment last October twelve months, in this Court, and decreed me for the whole amount. I put in some documentary evidence. Mr. Doran then said I refused to sign my purchase agreement. I put in some evidence. Here is one—that I signed the purchase agreement and could not find it, and Mr Doran said I refused to sign the purchase agreement. Here is the document which I did sign: one holding, the rent was £1 14*s.* a year; 18*s.* 2*d.* was the reduced rent. They cancelled that assignment, and processed me for the rent, and decreed me since continually, and charged me with the old rents, with the result that last week a carload of police came to my door, with Mr. M'Niffe, who had six processes of ejectment and a writ to the Superior Courts for rent—I have got four other holdings—at the full rent, simply because I demanded redress for the tenants; and notice to quit on another holding which I bought from the Board, and on which I expended over £300, simply because I asked for justice for the tenants and nothing for myself.

58508. Did you ever write to the Congested Districts Board, or to me, as carrying on the business of the Board in the intervals of its sittings, any statement of what you have said to the Commission to-day?—I approached the Board on two occasions, and never wrote to you. I wrote to the secretary, and I approached Mr. O'Connor, the Board's Solicitor. I went up two months ago, and paid my rent for the De Freyne Estate, according to the terms of arrangement. I offered a signed cheque to Mr. O'Connor to fill it in for my rent, minus the reduction that everybody was getting. Mr. O'Connor told me he could not; there was something at the bottom of it; but he would bring it before the next meeting of the Board; and that if the meeting would sanction the reduction that the people on the Dillon Estate were getting he would then fill in my cheque for the rent; with the result that my cheque was returned to me, and I got six processes of ejectment served on me and that writ.

58509. It comes to this, that you have declined to pay the demands which the Board have made on you because you did not get the reduction which other tenants got?—Yes, and I got it myself for two years.

58510. But you have not paid it up to date?—Yes; I have paid up. I was there last Friday with my cheque.

58511. Until that writ in the Superior Courts had been issued did you pay anything?—I paid two years ago the full rent.

58512. Minus the reductions?—Yes.

58513. Did you pay anything for the last two years on their demand?—I paid the De Freyne rent and the full rent, and I left a signed cheque for the other rent.

58514. Minus the reductions?—Yes.

58515. Your rents were in arrear to the Board to the extent of two years?—I owe them no rent. I paid £90 odd last week, costs and all.

58516. Not until the writ was issued?—I was up about six weeks ago, when I paid the rent on the De Freyne Estate.

58517. You only paid the rent demanded from you on the issue of the writ?—Yes.

58518. You would not have paid it only the writ was issued?—No. I think I am entitled to the same reduction as the other tenants.

58519. They say you are not entitled to the reduction; and as you did not pay them they sued you in the Superior Courts?—This will show you that I am entitled to a reduction (*produces paper*).

Sir ANTONY MACDONNELL.—We are not going into that question now. That question will be looked into if you make application.

58520. Sir JOHN COLOMB.—You were defendant in a number of Civil Bill ejectments for overholding;

were they all connected with this particular holding?—I hold nine or ten holdings.

58521. At all events, you have been referring to this holding?—Yes.

58522. You are now making a statement in connection with a case that is to be heard next Saturday?—No. I received a wire yesterday from the Board cashing my cheque at the full rent.

58523. You have got to appear on the 5th October in this case?—No.

58524. This summons is for the 5th October?—I was with the Board on Friday. I left a cheque with Mr. O'Connor on certain conditions. Yesterday I heard from the Board that the notice to quit was withdrawn, but that I should pay the old rent. I am showing the treatment I am getting.

58525. Sir ANTONY MACDONNELL.—It is all contingent on whether or not you are entitled to the reduction?—Everybody on the estate got this reduction. I got it myself for two years until I brought this complaint.

58526. Excluding that point alone, there is nothing objectionable in the action of the Board. They demanded a certain sum from you; you refused to pay them because you say they ought to demand something less; the Board say, "No, we don't believe you are entitled to a reduction and you must pay." You refuse to pay; they issue a writ against you, and upon the issue of that writ you pay up. It now remains to be seen whether or not you are entitled to a reduction all through?—Yes, but they forced me to pay up or I would not have done it. They served me with notice to quit on another holding and they served me with that writ.

58527. That is a move in the game. You refused to pay?—I know, but it is a move that it is time to expose if one man is to be badly treated and singled out simply because he asked nothing for himself, but demanded justice for others.

58528. Mr. BRYCE.—How many holdings have you got?—I have one on the De Freyne and one on the Dillon Estate.

58529. I thought you spoke of ten now?—Yes.

58530. Sir ANTONY MACDONNELL.—Had you them all yourself?—I held them all myself. My wife got ill. I took a brother of mine home as I had no family. The Board refused to accept him as tenant, so he went back to Manchester and I had to take it up.

58531. Mr. BRYCE.—Did you inherit these holdings?—No. I purchased them all from the occupying tenants in the open market, and built the places myself. I built four houses in Loughglynn.

58532. Are you a farmer?—Yes, and a cattle dealer.

58533. And a shopkeeper?—Yes. I export a lot of cattle to England.

58534. Have you a licence?—Yes.

58535. Do you ever lend money to the people?—No.

58536. I suppose they sometimes owe you money?—Yes, as far as shop goods are concerned.

58537. Had the cost of these holdings which came into your possession anything to do with shop debts?—I am a farmer and cattle dealer, and it is only within the last few years I opened a shop.

58538. Had the cost of these holdings anything to do with your shop debts?—Nothing whatever.

58539. CHAIRMAN.—How long have you had your shop?—About eight years.

58540. Mr. BRYCE.—When did these holdings come into your hands?—Over twenty-three years ago.

58541. All of them?—All with the exception of one.

58542. That one?—That one I have about five or six years and I had portion of it thirty years.

58543. How did these tenants come to sell their holdings?—The tenants died and their relatives sold the holdings. The parish priest had one of them and a man named Mangan held others.

58544. Is it a usual thing for people to sell their holdings in that way?—Yes. I would sell them now if I got a fair price for them.

58545. Sir JOHN COLOMB.—Are you now paying a purchase annuity on these holdings?—I am paying the old rent—Lord Dillon's rent.

58546. You are paying to the Government?—To the Congested Districts Board.

58547. There is nothing to prevent you from redeeming those holdings?—I cannot redeem them. I am paying Lord Dillon's rent.

58548. Sir ANTONY MACDONNELL.—You have not been vested yet with the proprietory rights?—They won't put my purchase agreement before me for three or four years simply because I asked for justice for others, and they compel me to pay the full rent and costs.

58549. Are there any other tenants on the Dillon Estate in the same position? I suggest to you that you have not been treated exceptionally. I know there is a considerable number of tenants who are not vested with their holdings for one reason or another, delays regarding clearing up title and so on. There are a few still remaining, of which you may be one?—I have asked about that. The judge last October threw out a suggestion that my purchase agreement should be perfected if I paid up. On that suggestion I went up to Dublin, and paid the rent on the De Freyne Estate. I offered a cheque for the rent according to the judge's suggestion. It would not be accepted, and six processes of ejectment and a writ were served a few days afterwards.

58550. Mr. BRYCE.—How do you work these seven holdings?—I farm them.

58551. You attend to it all yourself personally?—Yes.

58552. There is nobody living in the cottages on these seven holdings?—I have two or three tenants there.

58553. Under what charge are they to you?—I give them a good garden and a house for two shillings a week.

58554. What do you pay your workers?—12*s.* 6*d.* and 9*s.* a week and support. I keep thirteen or fourteen men working every day, winter and summer.

58555. The people on these holdings have no agreement with you. They are simply ordinary labourers?—Ordinary labourers. They are weekly tenants.

58556. You can turn them out at a moment's notice?—I will take very good care that I won't.

58557. You can do it?—If I wanted I could.

58558. These people are under your thumb. You could turn them out at a week's notice?—Yes, but I am not going to do it. I have offered to sell my houses to these persons and signed agreements to be sent on to the Board. One holding is enough for me. Even on the De Freyne Estate I am prepared to sell my lands to the Board if I get what I gave for them. I will produce a document as evidence of what I gave in the open market, and I will take that.

58558A. Meantime you are a small landlord?—No.

58559. You are a landlord in the sense that you have got tenants whom you can turn out at a moment's notice?—Yes, but I have signed agreements to sell to them and leave the valuation to the Board. So far as the cattle industry is concerned, I am a fair exporter of cattle, and I don't believe that any injury would result to the cattle trade if the better lands of Roscommon were divided up. I ship myself to all parts of England and Scotland, and I think myself instead of being an injury to the cattle industry it would be a great improvement; but I do differ from what Mr. Fitzgibbon contends as regards ear-marking the balance of the land after certain people are supplied. Another thing I differ in is that we should be very particular in selecting the tenants, because if we had to take that view in selecting tenants it would take until the Day of Judgment before all would be supplied. In my knowledge of the small farmers they are the best farmers I know, and anyone taking a broad view of things would say that whether a man comes from Connemara or the North of Ireland, let him be a Orangeman or Nationalist, if he was an agricultural tenant he should get a holding. I would not be for depriving any man of a home so long as he would be fairly well suited and understood the agricultural purposes of land, let him come from West, North, or South.

58560. Sir ANTONY MACDONNELL.—You would give a preference to men from congested tracts?—Yes.

58561. Mr. BRYCE.—Before the sons of tenants?—Yes. As far as tillage and the people in congested districts are concerned, I have a good knowledge of that. Take the little town of Loughglynn. I knew before the Dillon Estate was split up you would not get one bag of oats in the town. You would hardly get more than half an acre of potatoes. Take now that very village; all the farms split up around there have up to two, three, and four acres of tillage, with the good result that you have now thousands of

Oct. 2, 1907.

Mr. Patrick Webb.

barrels of oats coming into the village of Loughglynn, which I buy myself to a great extent, and those people who were in the habit of rearing only one or two pigs are now in the habit of rearing six or seven.

58562. This is on the Dillon Estate?—Yes.

58563. Do you say that there is more enterprise and activity on the Dillon Estate than there used to be?—Yes; I could prove it by my own knowledge. I am pretty largely, too, in the pig trade, with the good result that we have established a very good pig fair in the town of Loughglynn. Since the Dillon Estate came into the hands of the Board the amount of tillage has grown in the surrounding three or four miles, and we have a beautiful fair on the last Thursday of every month.

58564. Then it would be your opinion, barring the difficulties which you have yourself personally, that the transactions of the Board on the Dillon Estate have been successful?—Yes, but I think myself there are some tenants overlooked.

58565. On the whole, looking at the magnitude of the transaction, it has been a successful one, in your opinion?—I must give credit for that.

58566. Sir JOHN COLOMB.—Do these poor people deal in your shop?—They owe me nothing more than a few shillings or a few pounds, as a rule. Since I opened my shop I never had four processes in this court altogether.

58567. They are your customers?—What they require from me; they get a passbook from me. If I give them a bag of flour to-day I might get paid next week, or perhaps not for five years.

58568. Sir ANTONY MACDONNELL.—How can you make up for lying out of your money? You must get it out of them some way?—They deal generally with me. You have it in groceries and other things. I never charge any interest, and I can produce my books.

58569. I suppose that these cases of very old debts are very few—the people are good payers?—They are getting to be good now since they got an extension of land after the Board came in. They were not so good before. As a rule the shopkeepers of Castlerea and Ballaghadereen bore with the tenants. Those who got an extension of land began to compete with their neighbours for the putting on of extra beasts on the land and the doing of extra tillage, and on these grounds the shopkeepers of Castlerea and Ballaghadereen bore with them as well as they could, and did not press for money until their little earnings came in, and they are now trying to pay off what they owed for the last four, five, or six years. I think there is a general improvement, and if the potato crop turns out any way favourable there will be the greatest improvement, as far as paying debts is concerned, on the Dillon Estate.

Mr. HENRY DORAN re-examined.

Mr Henry Doran.

58570. Sir ANTONY MACDONNELL.—You have heard Mr. Webb's evidence?—Yes.

58571. Have you made notes of the points that he took up?—Yes.

58572. Perhaps you will give an explanation to the Commission?—In regard to the first point, I hardly think it worth while going into it, because, as I understood Mr. Webb, he did not impute the conduct that he mentioned to any member of the Congested Districts Board or any member of the Estates Commissioners or to yourself, and as I understood the conduct complained of was imputed to some of your subordinates. I suggest, subject to his Lordship the Chairman, that it is hardly worth while looking into the question whether some unknown subordinate approached Mr. Webb. I don't doubt Mr. Webb, but we need not go into the question whether some unknown subordinate exceeded his duty?—Allow me to say that I never have spoken to Mr. Webb about the purchase of the De Freyne or any other estate.

58573. We will go on now to the next point, He complained strongly that a man named Creighton, of Aughalower, who had a large holding, got a substantial increase, while people who had small holdings did not get any increase?—He mentioned Creighton's name. Creighton happens to be a rival cattle dealer. That is the foundation of his complaint. Creighton's case is before the public in the Thirteenth Report published by the Congested Districts Board. On page 182, there is a list of all migrants up to date, with particulars of their old holdings and the new, and Creighton's name appears here over this red line that I have marked (*handing up Report*).

58574. This man obtained a new holding?—The man had a substantial holding in Aughalower, the rent of which was £16.

58575. £16?—That is Mr. Webb's figure. It is inaccurate.

58576. *Mr. Webb.*—As he says it is inaccurate, I hope you will inquire into that case very particularly.

Witness.—The area of Creighton's old holding was 25 statute acres, and the rent was £10 17*s.* 7*d.* We found it necessary to make a small alteration in his holding in connection with the striping of the adjacent ones. We enlarged his holding to the value of £15 12*s.*; so his present rent is only £15 12*s.*, and his old was £10 17*s.* 7*d.* He is one of the most respectable and hardworking men in the neighbourhood of Loughglynn.

58577. Why did you increase his holding?—We had to acquire portion of his holding in rearranging boundaries. We did not consider a £10 holding was sufficient for a man like him when we happened to have the land. We enlarged all the neighbouring holdings except one, which was occupied by a very old man, who had nobody living with him in the house.

58578. Your enlargement to £15 was in connection with the rearrangement of boundaries?—Yes, and also the requirements of the man himself. You could not have a more suitable man as tenant.

58579. Mr. BRYCE.—Did you enlarge the other holdings?—Yes, but not to the same extent. The other holdings were at £3, £4, and £5 rents, and were brought up to £10 and £12. He did not give the names of any others. The next complaint was that we did not give land to four tenants whom he named in the village of Loughglynn. One was Gilligan. That man was offered a division of land, and refused to take it. He was offered a division more than once, and still persists in not taking it, for this reason: he occupied on his brother's holding, about a mile distant from the village, a small portion of reclaimed bog. He had this bog on his brother's holding for a number of years. He and his brother were on very bad terms. Before we sold the holding to the brother we insisted on this Peter Gilligan giving up possession of the portion of the holding he occupied, the brother giving him compensation. I think the compensation was fixed at £10. The brother agreed to pay this money, but Gilligan declined to give possession until we had to proceed against him and put him out by legal means. He then refused to take any land. We still have a piece of land held over for him. Up to the present he has refused to take it. The man is very obstinate and foolish. That is the explanation of that case. The next man, Thomas Fitzpatrick, is an old man, over 80 years of age. He is deaf and partly blind. He was a blacksmith by trade, and was never a landholder. We built a new house for himself and his wife, who is also very old. They had been living in a wretched cabin, and we put them into this new house, but as he was unable to manage any land we did not give him any. Nobody lives with him but his wife, who is between 70 and 80. There is no member of his family living with him. In the case of Francis Duigenan, we gave him a parcel of land in the townland of Aughalower. After he had it for a month or two I found Webb's cattle on the place. I found out from Duigenan that he had arranged to hand over the land to Webb. As we wanted the land for other people much in need we immediately took up the land from Duigenan and gave it to another person, so if Duigenan complains of not getting land it is Mr. Webb who has deprived him of it. The fourth man, Michael Grady, was not a regular tenant. He was a postman at Loughglynn. We considered that his claim was not as strong as that of several others for whom we were providing land. We did not give him any additional land. We have a small portion of land still on hands which, if Gilligan does not take, we can give to this man. That disposes of the four cases.

58580. Sir ANTONY MACDONNELL.—What about the

widows?—I cannot recognise the widows. I have no recollection of them, and I don't know what he is complaining of precisely. He did not say what was their valuation or townland.

Mr. Webb.—They are in the townland of Ballyglass, on the Dillon Estate, and the complaint is that when you were distributing the lands of Aughalower you left them out without any lands.

Witness.—In that case, my answer is this: to every person on the townland of Ballyglass who was able to manage land we gave an enlargement. There were two old women there who had no help. These may be the people.

Mr. Webb.—There are four or five in family—able sons and daughters.

Witness.—There was no person with a family in Ballyglass to whom we did not give an increase.

Mr. Webb.—Fitzpatrick has four in family. He has a son living in London.

Witness.—His son living in London is a man with one leg, who is in charge of a lavatory at Euston station. He is a pensioner on the railway. The next point is about the police barrack. He complained of a police barrack being built at Loughglynn, while a substantial house which has been used as a police barrack is going to be handed over to an official of the Board. The explanation of that is this: a man named Thomas O'Connor was a clerk to Lord Dillon for upwards of twenty-two years. He was living in a small house near Loughglynn village, and discharged his duty in the estate office every day during all that time. The Board took him on as rent-office clerk when they purchased the estate, as he was familiar with the rentals, and they have continued him in one capacity or another since then. Before disposing of the demesne of the Dillon Estate the members of the Board looked into his case very fully, with which I have no personal concern, and decided they would give Mr. O'Connor the building which had been formerly used as a police barrack. At that time the police were not living in it. They were occupying a house which Mr. Webb owned on the De Freyne Estate. They had moved from this to Mr. Webb's house, and this building was idle for three or four years, and was unoccupied at the time the Board decided to give it to Mr. O'Connor, with about twenty or more acres of land. The Board decided to do this in consideration of his long service and the fact that he had another house and some land that he was to give up to them. The house in which he lived, which was outside the village, was also taken up from him.

58581. Sir ANTONY MACDONNELL.—He is charged an annuity for it?—Yes; to be sold at a price agreed on. That was the explanation of his getting the house. At the same time the police had notified the Board that they would not re-take the place for a police barrack, as it was too far from the village. As there were no police troubles in the neighbourhood except in connection with drunkenness, it was considered desirable to have the police barrack in the village near the publichouses, of which Mr. Patrick Webb's was the principal. The Board then negotiated with the Constabulary authorities for the erection of a barrack in the village. On the Constabulary authorities agreeing to take a lease for a period of thirty or forty years at an agreed rent they undertook to build a house according to an approved plan. That plan was approved of by the Board, and the Constabulary authorities and the rent was fixed before we began to build; and so Mr. Webb cannot fix any responsibility on me in connection with the matter. It is all done under a minute of the Board. With regard to Mr. Webb's complaint, that he has been exceptionally badly treated and singled out for persecution, and that I am at the bottom of it, he says that all he wants is to be sold his holdings, the same as every other tenant. We cannot sell the holdings to Mr. Patrick Webb, because he is not the tenant. He knows that this is the explanation. He has been told it more than once. In October, 1903, without the knowledge of the Board, Patrick Webb assigned to his brother, James Webb, in Manchester, the principal portion of the holdings he held in Loughglynn. I have here a copy of the assignment sent to the Board's solicitors by Messrs. Field and Cunningham, solicitors, of Manchester. Under this agreement or assignment Mr. Webb assigned to his brother James six out of the eleven holdings that he held in Loughglynn and neighbourhood.

58582. Mr. BRYCE.—He said he had only seven?—Quite lately he has got rid of two of them. Out of eleven holdings he held he assigned six to his brother, James, of Manchester, and two to his brother-in-law. The six were the most valuable, and included the publichouse in which he lives, and now carries on business under the name of Patrick Webb, and also a valuable agricultural holding adjacent to the village. Mr. Patrick Webb got the same terms as all the other tenants for the first two years, and the Board were unaware that he had made this assignment for a considerable time. Then the bankers required the approval of the Board to the assignment, and the Board declined to give their approval, because they feared that it was being done to evade the payment of debts. However, not having taken action, the assignment became valid, and then Mr. Webb refused to pay rent. Both he and his brother have refused to pay rent for the last three years, with the result that each year the Board has had to process upon them or serve writs. I have a file here to show all particulars.

58583. Sir ANTONY MACDONNELL.—He says the reason he did not pay his rent was that he did not get the reduction given to the other tenants. Address yourself to that point?—Yes. The reduction was only given to tenants pending the fixing of the purchase price of their holdings. The purchase price of his holding was determined at the same time as that of the adjoining tenants. When the price was fixed he was applied to to come and sign his agreement the same as the others. He did not do so. This just happened to be about the time that he had assigned his holding to his brother. He did not give us any explanation, but he did not come forward to sign the agreement the same as the other tenants. The Board were perfectly willing to sell to him, but he did not sign the agreement when invited to do so. Then the Board sued him at quarter sessions for the full rent. Immediately after that we learned that he had made this assignment to his brother. He asked then to be allowed to sign his purchase agreement. The Board told him they could not allow him to sign the purchase agreement for a holding that he had assigned to his brother. Then the brother asked to be allowed to sign, and the Board had to say: "Your brother, Patrick, is in possession of the place; you are in Manchester; we cannot sell to you under the Land Purchase Acts any holding of which you are not in possession. If you come into possession of the holdings we will immediately sell to you." Then James Webb seems to have, in the most mysterious way, left all his business in Manchester behind him, and come to the village of Loughglynn. He went into possession of the publichouse and all that Patrick Webb semed to own there, and Patrick Webb retired to his villa residence known as "Farmhill," on the De Freyne Estate outside the village. Patrick Webb lived there for some time. James Webb after taking up his residence in the village requested to be allowed to sign his purchase agreement, and we said, "Yes, if you pay up the interest you owe." But meantime he and his brother seem to have fallen out, and the next thing we heard was that James was back in Manchester and Pat was back in the publichouse. So what are we to do? We don't know who is the owner. Then our solicitor was puzzled to know whom he was to sue for the rent, and he wrote to the bank people, and also wrote to Patrick Webb, and here is what Patrick Webb writes in reply. It is dated August last, and shows what a very offhand man he is. He says:—"All I want from the Board is fair play, and to buy my holding the same as the other tenants. James has nothing to do with any of my places in Loughglynn or about it. He would not live in Loughglynn; neither would his wife; neither did he give me any money for it, for my place there, nor I never gave him any possession or title of the place, so much so that he was buying Mrs. Flannery's place for a home when I would not give or sell him any of my places. He is now living in his own place in Manchester, there to remain." Our difficulty is this: We have notice from the bank in Manchester of the assignment. We have a copy of the registration of the assignment under which James Webb has paid Patrick Webb £1,050 on account of the purchase money. We really don't know

Oct. 2, 1907.

Mr. Henry Doran.

which of them is tenant. Patrick Webb has paid up every shilling of our demand, rent and costs, even though six of the holdings are legally assigned to his brother. So we really don't know where we are in the matter. If James Webb and Patrick Webb will go into occupation of the respective holdings they have a legal tenancy in, and pay the rent, the Board will sell to them, and was prepared to do so all through since the purchase prices were fixed.

58584. Mr. O'Kelly.—Had you any difficulty in accepting from Mr. Patrick Webb the rents for lands the property of James?—Not at all. We would take rent from anybody subject to issuing the receipt in the name of the tenant. This case, to my mind, assumes a serious aspect in this way. Mr. Webb has a considerable amount of influence with the people about Loughglynn. They are practically all in his books. You have recently heard some remarkable evidence about gombeen shopkeepers. I will tell you exactly how he got all these holdings.

58585. Chairman.—We are beginning to get a very long way from the subject of this inquiry. If this matter is to be considered further the Commission must consider in private what evidence they will receive. This is not a court of law. We do not want to hear details as to how Mr. Webb came into possession. The broad statement of the Board's position is sufficient. You have made clear, whatever may be the rights or the wrongs of the case, that the action of the Board is to a certain extent explainable by the fact of this doubt as to who is the actual tenant of these holdings?—It has been more than once suggested to the Commission that it is very desirable to prevent shopkeepers from acquiring tenants' interest in holdings through their business dealings with the landholders, and I can give instances where holdings have been acquired by playing the game of the spider and the fly, first inducing the people to contract debts, and then buying their holdings.

Chairman.—It is desirable that if statements are made here that they should be proved, but we are not in a position to ask for proof of these things, and therefore I think it better perhaps not to go into too great details.

Mr. Webb.—I ask your lordship and Sir Antony to allow me to explain, because it is evident, when Mr. Doran loses his temper, he is always ready to give me a prod in the back.

Mr. Doran.—I do it to your face. That is where I always hit.

Chairman.—The Commission will hear Mr. Webb in regard to the assignment.

Mr. Webb.—As far as the question of the assignment is concerned, I suppose you are aware that the great dispute on the De Freyne Estate was in full swing at the time, and myself and Mr. Redmond and Mr. O'Brien and Mr. Fitzgibbon and all were served with a writ for our share of £20,000 each, and it was suggested by a certain party that each member served with a writ should make an assignment of his place over to some relative belonging to him to save themselves from the consequences of the writ through the Tallow judgment being on. At the same time Mr. Doran applied to me——

58586. Sir Antony MacDonnell.—That is the explanation. Is it necessary to go any further?

Mr. Webb.—Yes, seeing the charges Mr. Doran has made.

Sir Antony MacDonnell.—The Commission have not allowed Mr. Doran to go into his charges.

Mr. O'Kelly.—Mr. Webb, I think, has gone absolutely far enough.

58587. Chairman (*to Mr. Webb*).—I understand you to say, in explanation of what has been said by Mr. Doran, that an action had been brought against various persons, of whom you were one?—Yes.

58588. How do you suggest that the transfer of the holding is affected by that?—It would have saved us at the time if Lord De Freyne got judgment against us. It would have saved the property by transferring it over to a member of the family.

58589. Then you say that the land was transferred in order to save, in case you lost the action, the land from being seized to pay that sum?—That is what our lands were assigned for, but I never got a farthing from my brother for those lands. I never knew that the assignment was perfected.

58590. Sir Antony MacDonnell.—The necessity for the assignment has now passed away?—Yes.

58591. Why cannot you have that assignment reassigned or cancelled?—It was all my own, and I have continued to pay for it, and they won't make my purchase agreement because Mr. Doran wants to prod me in the back.

58592. Mr. Bryce.—The Board has received notice of assignment. As soon as you persuade your brother, Mr. James Webb, to revoke that assignment, then the matter will be squared?—Before they recevied this notice of assignment, for the last five years, I have asked them to perfect my purchase agreement, and they won't do it, not even on the other holdings outside those six holdings that the assignment was given for.

58593. Chairman.—You tell the Commission that you assigned those holdings deliberately to your brother in order to avoid any possibility of those lands being taken in connection with the action brought against you and others?—Yes.

58594. Do you still, in view of that admission, suggest that there was not ample reason for the Board to be very careful before it regarded you as tenant and made the usual allowance to you that it had done to *bona fide* tenants?—Certainly not, because they knew nothing about this assignment up to the present year.

Mr. Doran.—Up to the time of the Quarter Sessions proceedings.

Chairman.—What was the date of the notice you got of the assignment?

Mr. Doran.—The 12th of October, 1903, but the Board were not aware of it until subsequent to that.

58596. Chairman (*to Mr. Webb*).—From the 12th of October, 1903, you ceased to be tenant?—I continued to pay the rent all along.

58597. You cannot be tenant if you assigned those holdings to your brother?—I assigned the holdings to my brother to defeat Lord De Freyne, but I was in possession.

58598. Sir Antony MacDonnell.—You were in possession for a certain time, and then your brother came over and entered into possession?—He never entered into possession.

58599. He took up his residence there?—He was in another house of mine.

The Commission adjourned.

ONE HUNDRED AND TWELFTH PUBLIC SITTING.

THURSDAY, OCTOBER 3RD, 1907,

AT 11 O'CLOCK, A.M.,

In the Courthouse, Strokestown, County Roscommon.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; JOHN ANNAN BRYCE, Esq., M.P.; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. JAMES NEARY examined.

Oct. 3, 1907.

Mr. James Neary.

58600. CHAIRMAN.—You are nominated by the Strokestown Rural District Council?—I am chairman of the District Council. The valuation of the union is £51,800, the area is 90,000 acres, and the population last year was 15,560. Twenty years ago it was 21,734; that is a decrease of 6,174 in twenty years. The only industry in this rural district is agriculture, mainly stock-raising. There are twenty electoral divisions, of which seven or eight have large grazing farms, with some of the best land we have in the district. A great many of them are held by graziers. Of the other divisions five or six are poor. Where there are no grazing farms the valuation in very few cases exceeds 30*s.* Some of those grazing farms are held on the 11 months system, others under yearly tenancies, others have judicial rents fixed, and others are bought out. In my opinion a great many of those farms should be acquired and distributed among the people who have small holdings. With regard to this, I believe that the sons of farmers having small uneconomic holdings ought to get part of them wherever adjacent. Those living on small holdings should also get part, and this I think before strangers would be imported from a distance. From some of those farms, at any rate, there were clearances made sixty years ago, and the descendants of some of those who were dispossessed had to go to other townlands and other places scattered about. I am also of opinion that the Land Purchase Act should be amended. Seven thousand pounds is too much to give to any one man to buy holdings. I believe it should not be more than about £3,000 or £4,000. I think that the Land Purchase Act should be made compulsory. In this county some of the large landed proprietors have sold out, while other owners are asking bigger prices. In my judgment the Act should be made compulsory in those cases. I think also there should be Government supervision. In some instances tenants pay too high a price. In fixing the price the landlord has an advantage on his side. He begins to negotiate with the tenants, and asks for a certain price. If the tenant does not give it some of them will put on the screw to pay up arrears and pay up the hanging gale. To my own personal knowledge this has been done; and I think adding a year's rent to the purchase money has also that effect upon tenants, because they generally give two or three years in the purchase in order to get rid of arrears for a year or a year and a half. In this town the fairs are going down. We suffer from want of railway accommodation. There is no railway within eight or nine miles. Years ago there was a scheme set on foot by the Grand Jury to have a branch of the Cavan, Leitrim, and Roscommon Light Railway constructed from Dromod. That was abandoned from some cause. We endeavoured to revive it again last year; a resolution was passed at the District Council, and the parish priest of this town had communications with the Under Secretary and the Chief Secretary. At the time nothing came out of it. There was a grant to make part of it on the Leitrim side of the Shannon, and the Leitrim County Council rejected a grant of £29,000 which was to be given from the Irish Development Fund. The fairs are rapidly going down. Last year the October fair of Strokestown, which used to be the largest in Connaught, was the worst in the whole season. I believe in acquiring land temporary lettings should be first taken, such as 11 months' land, and the rest afterwards. I think land should be taken from graziers having over a couple of hundred acres of land; next should come grass lands held by shopkeepers and professional men who have other means of living. In my opinion the people who require the land should get it in preference to others who have different means of living. There should be Government inspection wherever tenants, as in some cases, give too much. I knew one instance where tenants proposed to buy—a good many of them are here. They were willing to give the landlord's terms provided they got the rent due and the hanging gale added to the purchase. I reasoned with the tenants, and said:—"You are very anxious to buy in order to get rid of the arrears and to get rid of the present year's rent, but in two or three years' time you may be just as anxious to get a year's rent wiped off, and there will be no chance." The reply was:—"The Government will pass another Act at that time, and do something else for us." Around this town we found it very difficult to get land for labourers' cottages.

58601. I hardly think we have anything to do with labourers' cottages?—We suffer a great deal from floods in winter time. The arterial drainage is not so good as it used to be, and in winter time the low lands are flooded.

58602. Mr. SUTHERLAND.—You say that no land should be given to those who have other professions?—No, but I say I would take it from them before I would take it from those with farms who have no other business.

58603. Is land now largely in the occupation of people who have professions other than farming?—Yes, a great deal of land; and those men, shopkeepers, professional men, and others, principally hold 11 months land.

58604. Are you a farmer yourself?—Yes; a middle class farmer. It is almost a matter of indifference to them whether it pays or not. They can afford to give a big price. If the land does not pay it won't ruin them in any case.

58605. CHAIRMAN.—Have you any business except your farm?—None whatever.

58606. Mr. BRYCE.—What is the size of your holding?—Sixty or seventy acres.

58607. How much tillage have you on it?—About three acres.

58608. All the rest is pasture?—Pasture and meadow.

58609. What is the soil?—Limestone bottom. Most Roscommon land has a limestone bottom.

58610. Is it heavy land or mostly light?—Fairly light and medium.

58611. Not heavy?—Not very heavy.

58612. Could you till more than three acres?—It is not well adapted for tillage.

58613. Why?—It cannot be very well worked in the wet season.

58614. Is it badly drained?—Part of the soil is

Oct. 3, 1907.

Mr. James Neary.

sticky and heavy, still there could be more tillage done, but I find the majority of the people prefer grazing to tillage. We find it difficult in these days to get labour. They are nearly all small farmers around me. Those farmers in the hurried season have a great deal of work to do for themselves.

58615. Your farm is rather too large for tillage, unless you could get labour easily?—Without labour I could till a few acres more, but not much.

58616. If your farm was only twenty acres you could till it?—It would not make any matter to me, because I could not have more tillage.

58617. CHAIRMAN.—Do you find it more profitable to graze it and meadow it?—Under existing circumstances I could not get it done.

58618. Sir JOHN COLOMB.—Would the part of the farm that is sticky be injured by tillage?—No, but it is not soil adapted for tillage.

58619. I suppose there is a great deal of land in this district of the same character, that would not be easy to till?—Yes.

58620. CHAIRMAN.—I think you want to establish some labourers' cottages here?—Yes; we have labourers' schemes here.

58621. What are the labourers going to do?—We can till more land when we have them.

58622. You are going to build the houses in the hope that they will come?—We have up to 300 applications.

58623. Sir JOHN COLOMB.—Why did you say there is no labour in the district to till the balance of your holding?—A great many of these people are in the town, and about it, and a great many of them expect to get about five acres of land under the Labourers Act. They would then be small farmers themselves.

CHAIRMAN.—You don't want to build cottages to have labourers? You want to create uneconomic holdings.

58625. Mr. O'KELLY.—You say that lands held on the 11 months system should be first acquired?—Yes.

58626. Then lands held by graziers who have over 200 acres?—Yes.

58627. Afterwards grass lands held by merchants?—Yes.

58628. What is the reason for suggesting that they should be taken successively in this way, and not simultaneously?—I would not like to rush the business, but to have the supply according to the demand. If we had applicants for the balance I would take it, but if you take it all now there is danger that you might have a certain amount of land without applicants for it.

58629. Do you mean to say that if you have all these lands striped into economic holdings in Roscommon you would have a difficulty in getting tenants for them?—No doubt we would get tenants for them, but I would like tenants who have a small capital. If he has no capital he has no business going into the house with 15 acres of land that the Congested Districts Board will give.

58630. Are you aware that the supply is not equal to the demand?—I am aware of that; but if we acquire all the grass lands of Roscommon I am aware it must be some time before you get eligible applicants for the whole of them.

58631. You will admit that as an article becomes rarer in the market it becomes more expensive?—Yes.

58632. Let me suggest to you that if half the grass lands in Roscommon were sold to-morrow the remaining half would probably have to be sold at a price in excess of what the first fetched. Don't you see some advantage, therefore, in having the grass lands, so far as it can be done, purchased simultaneously, and not in the order that is mentioned in your precis?—Yes, to supply the demand of all the applicants.

58633. Take a case where you have congestion, where land adjacent is not held on the 11 months system, but is held under a different tenure: if your suggestion were to be followed those people would have to wait for a considerable time before their position would be improved?—No; I would not like it to be prolonged; I would like to get the land to supply the demand.

58634. You say that eligible applicants in this county should get a reasonable proportion of the grass lands of Roscommon before giving away any to people from other counties?—Yes.

58635. We all admit that the uneconomic holdings in Roscommon should have prior claim over the uneconomic holdings in other counties?—Yes.

58636. But I put it to you, would you be willing, once the congests of Roscommon are attended to, and their holdings are made economic, would you be willing to give a prior claim to congests from other counties over sons of tenants?—Yes.

58637. That is to say, once you had made economic all the uneconomic holdings in Roscommon, if you had some surplus land left, you would use that surplus land for the purpose of remedying congestion in other counties?—Yes. In many cases sons of farmers have more capital. They have no alternative but to emigrate. I would say that the population of this rural district has gone down one-third within the last twenty years, and in order to stop emigration I would give the land to those men in preference to strangers.

58638. In preference to congests from a distance?—Yes.

58639. Although doing that would involve perpetuating congestion in other counties in the West?—Coming to that point, I should say those people in the West elsewhere should get the land in their own county before coming here. Certainly, if we migrate the people from this county to Meath, I should say that the people there would not give them a hearty reception. That would be nearly on the same lines as bringing people from Connemara to Roscommon.

58640. If I point out that there is not enough land in other counties to satisfy the needs of those counties, would you, in case a surplus was left over in Roscommon after dealing with congests, give that surplus to sons of tenants to the exclusion of congests from other counties?—After supplying the demand in this county.

58641. When you say supplying the demand do you mean the demand of sons of tenants?—Yes. I would say the sons of tenants first. I am of opinion that in some of the places taken up by the Congested Districts Board the land was bought dearly. No doubt they have done a great deal which is very creditable to them, but I know some places in this county which were taken up by the Estates Commissioners and given to tenants which will not be nearly so expensive. They allow them so much to build a house, £30 or £40, and pay them for making fences. If the sons of small farmers got those lands in that way it would not come very expensive on them in the course of three or four years, and they could live and have every prospect of paying the rent.

58642. You say you would give a prior claim to sons of tenants in Roscommon to congests from other counties?—Yes, whose fathers and brothers, as the case may be, live on uneconomic holdings.

58643. You have a certain number of uneconomic holdings in Roscommon?—A great many.

58644. Every single one of those is made economic. After that is done you have some land remaining. To what purpose would you devote that land? Would you give it to congests from a distance or to sons of tenants whose holdings have already been made economic?—I will tell you the difficulty in that case. Take a man with four or five acres of land, over forty years of age, having a family. You won't get that man to go over to lands divided by the Congested Districts Board beyond Tulsk. He won't migrate there. He has every wish to remain in the old place. If we could get them to go over and have that land divided among small farmers, and so on, you would relieve congestion, and the point you suggest could be carried out. But we won't get that. These men would remain on their little holdings.

58645. I will put it once more, to have done with the question. The Congested Districts Board and the Estates Commissioners, assume, get hold of all Roscommon. Every single uneconomic holding in Roscommon is made economic. There is surplus land still left. Would you be in favour of giving this surplus land to the sons of tenants whose holdings have just been made economic, or would you, taking a broader view of the question of congestion, say that those who had the first claim were those congests who are living in neighbouring counties?—Certainly, if what you suggest could be carried out, then it would be only reasonable and just to give it to these others living outside the county.

58646. To give it to congests from a distance?—Yes.

58647. I notice that you say, in reference to the purchase of land from eleven months men and professional men, in each case the present occupiers should receive adequate compensation?—Yes, except those who have eleven months takes or temporary lettings. They have no interest.

58648. You say that the eleven months men have no interest that can be acknowledged?—Yes.

Mr. John Irwin examined.

58649. Chairman.—You are nominated by the Irish Landowners' Convention?—They asked me to give some evidence here. Having a good knowledge of land in the baronies of Castlerea, Roscommon, and part of Ballintubber South, especially of land used for pasture, I have been asked to give some evidence as to the effect of dividing the grass lands of the county into small agricultural holdings. I have been superintending for nearly fifty years the management of between sixteen and seventeen hundred statute acres of land—first for my father and subsequently for my brother, Colonel Richard Irwin, of Rathmoyle—and during most of the same time I have been holding from three to four hundred statute acres of land on my own account. During my father's lifetime there was usually from five to ten acres of the lands of Rathmoyle or Kilmurry kept in tillage, but in consequence of the soil being unsuitable there was a heavy loss on all the land tilled. I found under my management that the working horses used to eat practically all the oats that were raised, and we had very little profit except from the straw, with which we used to feed store cattle in sheds. I offered to give to the man at present living in the gate-house a rood of ground for himself and his family for potatoes, and to give it free, with manure, and he did not think it worth the labour, and would not till it.

58650. Sir John Colomb. Although he had the manure for nothing?—Yes. The greater portion of Col. Irwin's estate was sold to the Estates Commissioners in May, 1906, and they were then handed over the possession of the farm of Ballaghabaw Beg, which was at once divided up by them into holdings of about 25 statute acres each. The townland contains 427 acres 2 roods 5 perches statute measure, and the Government valuation of it is £386 15*s*. I have heard my father say that the land was ancient pasture, and had not been tilled within living memory, except small portions for use of herds. Most of this townland is a fairly dry, deep soil, and not too heavy or retentive, and in consequence, where well tilled, likely to give a good crop. I have been over this land lately, and can give evidence as to how the new tenants are doing on it. I was over it quite lately. It is divided into divisions of 24 and 25 acres, and the two herds got divisions of 24 and 25 the large farm got two divisions, and the herd on the small farm got one division.

58650a. Mr. Bryce.—By two divisions you mean 30 acres?—No. It is divided into 25 acres. One herd got 24 or 25 acres, and the other got 50 acres. The people having the small holdings always tilled two acres of the land. That was the amount they were allowed, and they generally used to have a good crop on it, and that herd has that tilled still. The other herd used hardly to till two acres out of the three, and he has about two acres tilled now, and practically there is no tillage hardly on the rest of it. There are a few bits used for potatoes, but they are very small, and they told me the potatoes in it were very good, particularly on the new land this year, but there was practically none of it tilled except what the herds had.

58651. Sir John Colomb.—The man who has got 50 acres has got only two tilled?—Yes. He used to till two when he was a herd, and I don't think he has much more than two tilled now.

58652. Chairman.—He was allowed three before?—Yes.

58653. Was that for fear he would break up permanent pasture?—It was marked out for them formerly what they were to till. They used to get a piece, what they called a herd's garden. The owner allowed a certain proportion for tillage, used chiefly for feeding pigs. The Estates Commissioners divided it all up. Last year they could not till it because the Estates Commissioners did not get possession of it until the middle of May, and consequently when it was divided it was too late to do anything in the way of tillage. Most of the land last year was in meadow. What they did with it I don't know, but a good many of them used it. This year there is not very much meadow on it, but they have cattle and sheep rearing on it. It is very good sheep land.

58654. Sir John Colomb.—Can you give us the dates when the farms were vested in the new tenants?—It was about the 15th or 16th of May of last year, 1906.

58655. Mr. Kavanagh.—Had the new tenants any capital when they went into the farms?—Small capital. One man has built a two-storeyed house, and he has no offices. Some men I recommended with capital, but they were not taken.

58656. Sir John Colomb.—Were the men you recommended with capital on uneconomic holdings?—One of them was a herd with no holding; another had a small holding, but had capital.

58657. Mr. Bryce.—Had these herds capital?—They had quite sufficient to work the lands they have.

58658. The man who got the 50 acres?—Yes.

58659. Has he nothing but his own beasts on it now?—Nothing but his own stock.

58660. Mr. Kavanagh.—Do you think a man going on to 25 acres without capital is likely to succeed?—I don't see what good land is to men who don't work it.

58661. Mr. Sutherland.—What is the capital required for if you don't till?—To put stock on.

58662. Beyond that?—Practically that is the principal thing.

58663. The absence of tillage here would be a sign of scientific farming?—I think they would do well to till a fair proportion, say about one-fifth or one-sixth, because it is fairly good tillage land—deep land.

58664. Land which they tell us is too good for the purpose of settling small holders on is surely not land fit to be tilled?—No.

58665. That is an argument against all tillage?—Some land is very bad for tillage and very good for rich grazing. Some lands in my neighbourhood that put stock in very good condition are of very bad tillage quality. The cutting up of that land into small divisions is an enormous waste.

58666. About the fitness of cultivation, we are told actually that these best lands in Roscommon are not suited to cultivation?—No.

58667. They place small tenants on them and proceed to find fault with them because they don't till; but if tillage is the worst form of farming, why should these people be found fault with for not tilling?—These lands are too heavy for tillage, even in England.

58668. That would be the reason why these small people don't till that land?—Certainly. I think they know what they are doing very well, and find that they will make more grazing it. Some of the land divided up in my neighbourhood is a great addition.

58669. My point was to reconcile the two theories. If it is a good theory for a large grazier not to cultivate surely it is an equally good argument for the small man?—The large grazier goes in for rearing stock, and he very often does not live near those things.

58670. I quite admit that, but it has been so often put before us as a reason why the people go in for stock-raising that the land is not fit for tillage?—I believe that a great deal of the land in my neighbourhood is best laid out for grazing.

58671. The argument would be that if the small holder was put down on the land and he did not till it, it must simply be for the same reason?—Certainly.

58672. Mr. Bryce.—You said just now, as regards these lands distributed by the Estates Commissioners, that they were very well suited for tillage?—A good portion of this land is. The herd on the small holding used to have a very good crop every year off the two acres.

58673. You say you don't till because the land is too heavy, but you say that the land distributed by the Estates Commissioners is fairly good, and the deep soil is not too heavy, and in consequence if tilled likely to give good crops. That being so, why don't

Oct. 3, 1907.

Mr. John Irwin.

they till it?—I fancy they think they can make more of the stock. At all events they are in the beginning state of it. Only one man has a house built, and he has no office, which does not look well. He has a two-storeyed house, and the water off the slated roof will not run down off the walls, for there is no eave left. Two men named Ryan have two good 25-acre holdings between them. They are putting up good houses and good offices, and there is one other man, named Lavin, that is building a house, and there is a little shed in one place. That is all that is done in the way of building on that at present; but the land is wonderfully deep.

58674. Sir JOHN COLOMB.—You say that during your father's lifetime there were usually from five to ten acres of the land kept in tillage; what was the period of your father's lifetime?—That would be during the sixties.

58675. Were not the prices of agricultural produce and grain then very much higher than now?—They were decidely higher then than now, but we never sold grain off it.

58676. Mr. KAVANAGH.—Can you expect these new tenants to go straight away into tillage?—No. The first year they could not go into it, because they got it too late.

58677. Until they have got manure they cannot till?—They cannot.

58678. Then it would take two or three years before you can know what use the new tenant is going to make of a holding?—I should say it would. The worst of it is even the man with the two-storeyed house has no outhouse, so I don't see where you are going to get the manure.

58679. Even given outhouses, it would take two or three years before they could get into tillage?—It would take a year at least, because he has lots of hay on his land that he did not use, and could feed a good many cattle in consequence, and have some manure if he did it.

58680. Mr. O'KELLY.—Is there any kind of tillage for which the heavy land is suitable?—I don't think so. I have read articles on the heavy clay lands of England, which seemed to say that they could not be tilled profitably by small people, but that it should be done by steam cultivation.

58681. When you say small people, how many acres do you mean?—In England we consider a man with less than 300 or 400 acres one who cannot use steam cultivation.

58682. If it were said that heavy land was suitable for a special class of tillage you would differ from it?—I don't think that class of land suitable for tillage. I have been acting as agent on Colonel Irwin's estate from 1879 up to the present. During the time the grass farms have been let in grazing tenancies the rent has been punctually paid in May and November when due, and there has not been any loss on them except in the case of one small farm, the tenant of which died, and it remained unlet for the winter half-year.

58683. Sir JOHN COLOMB.—It has been represented to us in evidence that rents of grazing lands have fallen during the last few years?—Yes.

58684. The grazing rents have been punctually paid on the property you manage, and have not fallen?—They have a little, not much. They kept at the same figure up to 1894. There was a little slump in grazing then for three years, and in consequence the rents were reduced somewhat.

58685. For the last ten years, in your experience of managing grazing farms and receiving grazing rents, the rents have been pretty steady?—About ten years ago they were reduced, and they have kept about that since.

58686. What you mean is that although they were reduced ten years ago they have remained stationary in the interval?—Yes.

58687. Mr. O'KELLY.—They have remained at the figure to which they were reduced in 1894?—Yes.

58688. Was the reduction then considerable?—There was a good deal of reduction given on the Ballaghabaw farm, but not on the others. It was more for store cattle. It used not to finish cattle. It used to feed a good many cattle and sheep.

58689. Are there many farms in the County Roscommon on which cattle are finished?—I don't say exactly finished. I imagine you could get them finished if you gave them time. They are able to put any cattle put on it into fine condition, well skinned and ready for sale the minute they come out. While I consider it a disadvantage to this part of the country that the grazing land is let in too large areas, which more or less prevents the expenditure of sufficient capital on it to bring or maintain the land at its best, I consider it would be a great injury to this part of the country to expropriate the graziers and put small tenants in their place, as they are mostly men of great intelligence and industry in the management of their business, and without their energy, ability, and capital the cattle and sheep trade in this county would be irreparably injured. The class of cattle and sheep in this part of the country are exceptionally good, and they have been gradually brought to that by men holding large quantities of land. The first improvement in the cattle of the district was brought about by Dean French, who held the Palace land, near Elphin, and imported for years and years very fine shorthorn bulls, that made that class of cattle in this part of the country exceptional about Elphin. Then there was great care taken in the breeding of the sheep, and the Roscommon sheep was brought out. Mr. Taaffe, a very large breeder, used to bring forty or fifty rams every year to Ballinasloe, and what he used to particularly pride himself on was "these are not pampered sheep; these are sheep fit to put out on ordinary grass, for practically they have been only reared on grass; they are not pampered or brought out." They used to be splendid sheep for breeding.

58690. Mr. O'KELLY.—You deplore the fact that the grazing land is let in too large areas?—Yes. There are some fields near me too big.

58691. What improvement would you suggest in that direction?—One of the fields near me has over 200 acres. That is too big. They should be fenced in smaller quantities, and I think myself if the graziers got a fair share the proper way to manage the land would be to have it mixed grazing and a fair share of small tenants as well, and then things would work better for the benefit of all.

58692. Portion of the large farms should be in the hands of the small tenants?—I think some of them could be given to small tenants. I would not cut out the graziers altogether, because they are men with plenty of capital, intelligence, and industry, and make the most of grass lands.

58693. Sir JOHN COLOMB.—Do I understand you to say that assuming a grazing farm is bought upon which there are two classes of land, partly good grazing land that ought to be kept in grass, and partly land of such a nature that it would be improved by tillage, your policy would be in acquiring that land and distributing it, that the land suitable for tillage should be given to small holders and the land suitable for grass reserved for graziers?—That, I think, would be a very good arrangement, if it could be carried out conveniently without too much expense.

58694. On general principles you would advocate that?—Yes.

58695. CHAIRMAN.—Have you any reason to think that the grazing lands of Ireland, as they exist now, could carry more stores than they do at present?—Some of them might be improved. There is one thing they used to do in former times to the grass lands in my part of the country. There is a stuff they call blue gravel or blue marl. Ireland was swept by the ocean long after England was formed, and the limestone rocks were dashed off, and they left this debris on the surface, and then there was a sedimentary deposit after that. They tell me this does not exist in England, but it is a fertilising agent in our part of the country. On all the best grass lands about me you will see a sort of holes dug in them. They call them sand pits. They were holes from which the graziers raised the blue marl with which they top-dressed the surface. It has a better effect than liming or anything else, because very frequently the soil is deficient in this.

58696. That is not done sufficiently in these days?—It is not done at all, and has not been done for the last twenty or thirty years.

58697. My point was this: I understand you to say that it was your general view that a certain amount of grass lands should be divided up among the people, but it is necessary to retain the grazier to a certain extent as a factor in the cattle trade?—I think so.

58698. Suppose the result of breaking up the grass lands was to increase the number of stores?—The small tenant will raise stores.

58699. That would increase the gross number of ores produced during any given year?—It would.

58700. If the grazier is really a necessary factor in e situation it means that the land which he oc- pies will be reduced by the amount of land you ve the small people, and this smaller amount of nd would have to carry the greater number of ores produced?—It would, if they had not some ner market for them.

58701. Is there any market for yearling beasts?— fear there is a slump in them at present, from my bservation.

58702. Do you suggest it might be possible to get d of a surplus of young stores to England?—There a certain quantity of not very young stores taken England as it is, but there would not be a call in ngland for many young stores. They prefer cattle rward in condition. They won't take poor cattle all in England except at wretched prices.

58703. Unless the English markets came to the scue the result would be that the existing lands ould have to carry an additional number of stores ed by these small holders?—Yes.

58704. Could the lands do that, even if you put neral on them as suggested?—The grazing lands, think, could be improved, but not to that extent, if re was a large division among the small holders.

58705. Sir JOHN COLOMB.—Was not the mineral to hich you refer used in the old days practically be- re cake and artificial manures existed?—Yes. They ere not well known, and they preferred this to the ming.

58706. May it not be that the disuse of this mineral due to the introduction of cake and artificial anure, which give better results?—It gave very good sults. Labour was much cheaper than at present. abour is so dear now that it pays better to use arti- ial manures.

58707. Mr. KAVANAGH.—Putting aside the question f top-dressing merely, would not the grass land of oscommon carry more cattle than they put on it t present?—I don't think they would. Some years hich are good for grass they would carry more. ther years which are bad for grass they don't do ell.

58708. Would you call this a good year?—No. This a very bad year for our county, because it was too old and wet, and the grass did not grow at all until uly—that is anywhere that was stocked in winter.

58709. I thought this was an exceptionally good ass year?—Not in our part of the country. It may n Galway or on light lands.

58710. Because passing through the country one is ruck with the small amount of stock which these reat grazing ranches carry?—After all you will see ry little waste grazing.

58711. I think I see a great deal of it?—There is me at present owing to the agitation.

58712. It is not your opinion that the grazing lands an carry more stock than is on them at present?— don't think they can carry much more. If they ere carefully managed and divided up into smaller ivisions probably they would.

58713. If they were used better and top-dressed now nd then?—Yes, if they were top-dressed.

58714. I suppose they get no artificial top-dress- ng?—They get hardly any. Some people use a little ag, but they get practically very little top-dressing, nd of course stores have a tendency to exhaust the hosphates.

58715. If better used they would carry more stock?—Yes, and I think you could get more land to fatten f it were taken up well, than at present, because a ot of land is used for stores, not alone in this part of he country, but in the County Meath, on which they ave up fattening cattle, and took to raising polly ullocks for the English market; and there could be nore cattle fattened in this part of the country if it ere taken up for this purpose.

58716. So if you took away the arable land for plitting into small holdings the remaining good grass and, if used well, would carry more stock?—It would arry more stock. I could not say that it would carry he surplus stock.

58717. Then it would not dislocate the cattle trade o the extent anticipated?—It would not carry all the urplus stock that would be raised by dividing up o much of the land.

58718. Sir JOHN COLOMB.—It would not meet, in your judgment, the increased supply produced by the small holder?—It would not.

58719. Mr. BRYCE.—What do you mean by taken up?—Instead of using some of the land that is now used for store cattle for that purpose I think it could be made to fatten if properly treated. If you take up land for fattening you must not stock it heavily in the winter. A great deal of the heavy land has too much stock put on in winter, and will not carry sufficient stock in summer in consequence. The small tenants keep, in fact, an enormous quantity of store stock in the winter. That would prevent the necessity of keeping so much cattle on the grass lands in winter.

58720. You said that in former days they used that mineral to which you referred more than they do now. I think that mineral is the boulder clay left by the ice, and not stuff left by the sea. I think that that is the present geological theory?—The limestone rocks were rubbed off.

58721. Is the result of the mineral not being used that the land is deteriorating?—I could not say. The fact was the gravelling was done before my time—at least when I was young, and was not able to observe the thing carefully.

58722. Because we have heard a good many people say that the land on these grass ranches is deteriorating—is that your experience?—I don't think so. I think the very good land is as well managed. I can not see that there is much difference. Some people tell me that the land does not carry as much as formerly. That is not my experience. I find some of our land carries as much as thirty years ago.

58723. In the last ten years there is no sign of the land deteriorating from the fact that less has been got for it?—Yes.

58724. CHAIRMAN.—Do you set land on the eleven-months system?—Yes, for my brother.

38725. Do you find it necessary to do any manuring or thistle-cutting on the land which you set?—No. I take care that it is properly managed, and allow nothing to be removed off the lands.

58726. The graziers cut the thistles and improve the land as much as they can?—They don't do anything on those. In that case the landlord is supposed to maintain the fences and everything.

58727. I was told the other day by a landlord in Mayo who lets a good deal of land on the eleven months system, that it was his experience that he had to do a great deal to the land to keep it up, and that he had to cut thistles every year?—The landlord would be expected to do that and maintain the fences.

58728. Don't you think that it is because some landlords don't do that that the lands in some places have deteriorated?—They would get a little deteriorated, of course, but a small expenditure would bring it back again to its former condition. There are a large number of tenants in the Castlerea Union who have small holdings, mostly adjoining bogs, who feed perhaps one cow during summer, and rear two or three calves with her, and may buy a couple more young calves to keep on poor pasture during portion of the summer, and they feed all these cattle during the winter, taking some meadow or buying some hay for them, which enables them to have manure enough to raise good crops on their moorland or poor upland; but their cattle come out in spring in such poor condition as to be quite unsaleable; so they bring them to the grass lands in this part of the country and settle them grazing on the good pasture lands for the summer six months, and sell them when fit for sale at the end of that time; and as a large tract of land in the hands of the Congested Districts Board—about 3,500 acres in my neighbourhood, used in this way, that the Congested Districts Board have—is at present stocked with these cattle, some idea can be formed of the loss these people would sustain by being deprived of the grass.

58729. Mr. SUTHERLAND.—You are using an argument in favour of the continuance of the grazing lands, and you draw a very pathetic picture of these poor people, with their one cow and two calves, but the argument is that if these people got the land themselves and were settled upon it the necessity for doing this other thing would disappear. That is a reasonable construction?—So far as that is concerned,

Oct. 3, 1907.

Mr. John Irwin.

the people living near the bog have an immense advantage, because they have the manure of these cattle to till the reclaimed bog and the poor land, and the consequence is that they keep the cattle and winter them for the sole purpose of having the manure, and they buy a lot of hay off the good lands. It is like Mahomet and the mountain. You cannot get the grass lands beside them, and they simply must do this.

58730. The proposal is to bring the people who have no grazing to the grass lands?—People who have bog won't go. People have no conception of the loss it is to a tenant not to have bog. Pigs are the most profitable thing which people can have. They bring a return in a quicker time than any other stock you can feed, and you practically cannot raise them without fuel.

58731. Mr. O'Kelly.—Then your idea is, it would be better to have the bog land broken up than the grass land?—It would be a good thing if you did anything to provide them with fuel.

58732. Chairman.—Why cannot you raise pigs without fuel?—You won't make profit on them if you don't cook their food. I know, because I had some experience of living in Mayo myself.

58733. Sir John Colomb.—Your contention is that small holders on the end of a bog are not likely to be induced to go away from the bog, where the difficulties of getting turf would be greater?—Yes.

58734. Therefore, unless they can be enlarged by suitable arable land close at hand it would be better, as a policy, to reserve for that class land where they could graze their young stock?—I think so; it would be desirable.

58735. Mr. O'Kelly.—Do I understand you to say that the Congested Districts Board have a very large tract of land which is not distributed?—Yes, which is grazed by small holders adjoining.

58736. Of course it would be a great loss to deprive these people of the grazing, but no one has proposed to do so. It was to provide them with it that the Congested Districts Board went there?—How are you to give it to them?

58737. When that large grazing tract, in conjunction with many others, is broken up, is not the question solved?—It would not be desirable to give them a piece of grazing land ten or twelve miles away from where they live.

58738. It would not be desirable to do it, the objection being that there is no turbary twelve miles away?—The people won't leave where they are living.

58739. I quite understand that in the early days of the Board's work there was a prejudice against leaving the old place, but I put it to you that the prejudice is fast disappearing?—No; they are a great deal better off where they are.

58740. Then they much prefer to live upon the bogland?—They live upon the upland adjoining the bog.

58741. What does your argument lead to? Do you think it is wise to have the grass lands added on to the other holdings or not?—If it could be added on to the existing holdings, most decidedly; but when it is ten or twelve miles away I don't see how it is to be done.

58742. Do you believe in migration?—I don't believe in migration, because the people won't leave where they are comfortable.

58743. That is a matter of opinion. Opinion based on experience can be urged against you on the other side?—All I can tell you is there is a large farm near me which is being cut up into divisions by the Congested Districts Board, and there are some people home from America. Some of them I heard were the heads of families. They said if they got the whole farm they would not take it.

58744. From their American experience they see matters in a different light from those at home. Suppose there is this considerable reluctance on the part of the people of Roscommon to leave the boglands, what is the explanation of what is generally known as cattle driving in this country?—Cattle driving is done by small tenants who live close to the lands, and want to get an increase.

58745. Is it for amusement or with the desire of having the lands broken up?—The small holders want to have the lands divided up among them.

58746. And the fact that they engage in a work of that kind, that is not without some risks, would not suggest that they would be willing to leave the boglands, and go on these grazing farms?—I cannot suggest the reason at all, because probably there are many reasons for it. I don't go into that or interfere with that in any way.

58747. I only put that latest phase of the public movement before you as indicating the desire of the people to get on to the good lands, and as indicative of no unwillingness on their part to change from the surroundings in which they now find themselves?—I don't know who the people are, but of course they all want to get more land. There is land hunger all over Ireland.

58748. Mr. Bryce.—Do you think any of the people who have been doing this cattle driving are the bog people whom you have been describing?—This is in the congested area, beyond Castlerea. I have not heard of any cattle driving done in the neighbourhood.

58749. You have not heard of any people coming from the bogs to join this cattle driving?—I could not tell you. I never was in one of these crowds.

58750. Are there no grass lands nearer to the bogs than those you have described as twelve miles off?—No.

58751. What adjoins the bogs?—The upland, and it is all divided into holdings. They nearly all have upland as well as bog.

58752. But on one side of the bog you come to grass lands?—No.

58753. There must be a point at which upland and bog stop and something else begins?—There are some grass lands, but it is light land. A good deal of it is tilled by these people who have it. There are no large grass farms on that side.

58754. There are no large grass farms nearer to this bog than twelve miles?—Not in the congested area beyond Castlerea, down in the Loughglynn direction.

58755. I think there is some near Loughglynn, because I saw it?—I don't know any large grass lands there. There is a very congested area there—the Frenchpark Estate and Mr. Sandford's, and several other estates down there.

58756. Mr. Sutherland.—Generally in that part of the country the land is not good enough to be left in grazing—No. It would not make good grazing land. It does better for some tillage on it. There are some lands in this neighbourhood which are not good for tillage, but are very valuable for their feeding and fattening quality, and I believe cutting them up into small holdings would very much depreciate their value. There is a great deal of loss on the fencing, and cutting up prime grazing land would injure it very much, and I don't believe the tenants could possibly make as much of it as is to be made on the grass farm as it stands.

58757. Sir John Colomb.—Have you any experience of an attempt made to till this good, stiff grass land, which was found not to pay, and, if so, can you tell me how long it took to get that land back again into the condition in which it was before it was disturbed? I have seen some of the portions tilled, and I know there were several years before it was as good as it had been.

58758. Where you break up stiff land of a good grazing quality into tillage and want to get it back into grass, is not it a very long process to restore it to its former value as grass land?—It will take several years. It depends very much on how the land was treated while it was broken.

58759. Mr. Bryce.—We have been told by several witnesses who objected to the dividing up of these grass lands that even if they were kept in grass there would not be the long run for the cattle which there is at present. Do you believe that the long run is necessary for forwarding cattle?—I believe that cattle do better on a large sized holding than on a small holding, but of course on a small holding there may be a great deal done if the land is properly managed: but I know that the people who bring in these cattle to have them grazed in summer much prefer to get them on a large run of good land than on a small holding because they know that they would not do so well on a small holding.

58760. What is the reason of that?—On the large run the cattle have different sorts of pasture, and generally they have more grass left on it. Small tenants generally stock pretty heavily in the winter, and land that is stocked too heavily in winter won't feed anything like the number in summer. The sole gets eat

There is a surprising difference in land that is stocked with cattle during winter and that which is not. Some of the grass lands in this neighbourhood now being divided into small holdings I consider unsuitable for tillage. There is a large holding quite close to me. I was on it about 1881 or 1883. I was appointed by Mr. Glancy on his part and Mr. Guy, of Dorrington, the landlord, to arrange a rent on it. It is a large farm of 317 acres, and was held by Mr. Patrick Morris. I have seen some of the cattle that came off it I knew it long before that, because I used to have the right to shoot over it. I was rather disappointed with the quality of the land. I remarked there were a great many portions of it taken up in tillage and let out again. I made inquiries and found Mr. Glancy used to allow the herd some portions of tillage to sow his potatoes. The herd said the potatoes were not good and the oats did not ripen. This is at present cut up into small holdings, and I am very much afraid that it will not be satisfactory as tillage land. On the west end there is a great tract of very wet land. When I used to shoot over it there was very good cover on it. About the beginning of the seventies my father was an inspector of drainage for the Board of Works. Mr. French, of Cloonaquin, came with the agent on the farm. He said Mr. Glancy found the wet land a great disadvantage, and wanted to do some drainage. The landlord advanced the money on the same terms as if it was got from the Board of Works. He wanted someone to certify that the works were properly done. He came to my father and asked him to do it. He had a great belief in drainage. It was very easily drained because there were swallow holes in it into which one could conduct the drainage. He carried it out. It used to carry fair herbage before that, but there was practically nothing at all on it afterwards, only a few inches of organic matter forming the soil, and there was moorland pan underneath. As long as the water was on it it used to rest there, and the evaporation used to come up to the surface, producing sweet herbage in summer. When the water was taken off the moorland it left it practically dry and unable to produce anything. You could not do anything with that land except to subsoil it, which would be a very expensive process. If the limestone mineral underneath were taken up and spread on the top it would probably improve it. That is the only way I could suggest for improving the land. I consider it very unsuitable for small tenants and don't think that small tenants will succeed on it.

58761. Sir JOHN COLOMB.—What would you roughly approximate as the cost per acre of subsoiling? It is a very expensive process?—It depends on the way it is done. My father had a very peculiar way of doing it. At that time you could get labourers in plenty. But what he used to do was to set this for potato sowing, and they used to break it in ridges. He used to take every alternate place the full breadth of the ridge and would throw up any stuff there was over this moorland pan on the ridge and put manure on it and sow potatoes, and in the middle of the summer he would get the subsoil dug up and broken, and subsoil the next year the part that was unbroken. He would have the part that was broken with the ridge on it, the part that was unbroken he would get dug and in that way it was done with very little expense. But the ridges should be carefully done. It is a troublesome process.

58762. But that process is well within the power of a small tenant who had a strong family?—Yes; if they took the trouble to do it it could be done.

58763. As a matter of fact, that very process is within the capability of the small farmer who has strong help in his family?—Yes, if he could be got to do it; but you would want to have a very low price on that class of land, to compensate them for this work. There were some grass lands divided up on the Kirkaldy Estate some years ago. They have worked pretty well, but I think they have not much tillage on it. They have what I consider reasonable. They seem to be all improved by having it divided up. Whenever it can be done among adjoining owners I believe it would be useful, whether they use it in grass or tillage; but the great difficulty in this part of the country is fuel. It is wretched to see people at this time of the year with only a few branches to keep them warm in winter.

58764. Mr. O'KELLY.—Where do they get their fuel in winter?—The tenants of that farm of Ballaghabaw told me that not one of them had a sod of turf on Sunday week. They had only some tops of trees that happened to be cut at Willsgrove and Southpark. Some of them cut in Willsgrove and Southpark had no firing at all. That will come to an end very soon. I don't know what they will do. They will have to get coal. I saw the turf, and certainly it was very bad, and it cost six shillings a horse crate. That is a most preposterous price. There is a large bog at Ballyglass, on Mahon's Estate, not too far away. If the Congested Districts Board bought it and made a good pass into it so that the turf could be easily cut and carted home, it would provide a great many people with turf, though it would not probably, if there was a larger population brought into the country, supply them all.

58765. CHAIRMAN.—How many years will turf keep after it is cut?—Two or three years, if properly ricked, but you must have it properly ricked and cover it on the top. They very often used to have turf for two years. It is always an advantage to have a lot of old turf in case of a wet summer.

58766. Sir JOHN COLOMB.—Next to turf is water?—Yes, that is a great difficulty in our part of the country. All the water goes underground; it is a cavernous limestone. They sink pumps and get a little surface water that runs into them, but that is very unsatisfactory.

58767 CHAIRMAN.—How do you propose to get over the difficulty of fuel?—The only suggestion I could make is to set up a factory of compressed peat where the bogs are plentiful.

58768. That has failed?—It seems to have failed in a great many instances, but I think the problem could be solved if capital and energy were put into it.

58769. Do you think if capital and energy were applied to the industry of compressing peat it would succeed?—I do. There are a great many ways of doing it. A great many years ago my father was very much filled with the idea. A Rev. Mr. Cobbold took out a patent for making compressed peat. It was like a pug mill. There was water turned on to it. You work this up, and he said he used any sort of peat stuff on the top of this bog, and it ran out in a black stream. He had squares for it to run into on the ground to dry, and he told me after the stuff was taken out of it there was a little light stuff taken off, and then it was cut into stripes, and it got a little firm, and then it was dried and cut up like bricks exactly; but I saw some of this peat, and it was the hardest stuff you ever saw. You could hardly cut it with a hatchet, and it was perfectly solid.

58770. Did it burn?—It burned splendidly.

58771. Because, so far as your evidence goes, we have heard of no industry in which peat fuel has been successfully produced?—There certainly have been failures.

58772. Mr. BRYCE.—There is a Scotchman doing that very thing that you have described, on the Blackwater, at the south-west corner of Lough Neagh. He has got a bog there, and has been doing that for several years, and I believe is doing it very well?—This was like the hardest jet. There was practically no waste, except the top stuff of the bog.

58773. Where does the economic advantage come in?—I suppose the cartage of the turf is so much per load?—Yes. This compressed peat is easily carried by rail or by cart, and in that way it can be brought cheaply where there is no turf at present.

58774. Sir JOHN COLOMB.—The difficulty in the carriage of turf is not so much a question of weight as one of bulk, and if it was possible economically to compress it a man with a cart would get a much greater supply of fuel than he would get if it was simply turf?—Yes; there would be an immense difference. The carriage of turf is enormously expensive.

58775. Mr. BRYCE.—Could you carry more than a certain weight of turf on the cart?—It depends very much on the nature of the turf. Stone turf you will get very heavy. A good cart of stone turf is a good load on the horse, but if you have a load of the whitest turf it won't weigh much at all.

58776. The horse could drag a greater amount than he does drag, so far as weight is concerned, if the bulk were reduced?—Yes.

Oct. 3, 1907 Mr. W. J. Walpole examined.

Mr. W. J. Walpole.

58777. Chairman.—You are a member of the Roscommon Graziers' Association?—Yes. I am a considerable landholder myself, and I have considerable experience as a land agent and as a valuer.

58778. Where do you hold your land?—In this immediate neighbourhood I hold my land. Although there is land in Roscommon suitable for the relief of congestion the deep, strong land, with deficient water supply and remote from fuel, is not suitable for division into small agricultural holdings. This land has practically always been used for grazing, and no one has as yet successfully used it in any other way. Corn laws, bounties, or high prices, such as existed during the Napoleonic wars, may have resulted in tillage having been carried on, but with this artificial stimulus removed the land returned to its natural use. There is a considerable amount of lighter soil here and there, particularly in the southern half of the county, which would be suited for mixed farming. The non-residential grazing farms are held in various ways—some as statutory tenancies, some purchased, much of it under yearly lettings or short leases, and some on the eleven months' system. The latter system is, in my opinion, not nearly so prevalent as one would be led to believe by what we read in the Press, and where made use of it is frequently only a temporary expedient on the part of the lessor. The holders of eleven months land are not so much the graziers, who have always been such, and their predecessors before them, but are as a rule successful cattle dealers and small farmers, who, by energy and good management, save money, and find this is a convenient way of extending their operations. From my own knowledge I have every reason to believe owners who have land in their complete control would sell at a fair price, but buyers—that is, the Estates Commissioners or Congested Districts Board—who require to sell at a bargain price cannot give a fair price, and re-sell at a bargain price without loss. Not replying to circulars as to willingness to sell is no criterion of willingness. The State, by their passive action as regards interference with the liberty of owners, has brought a certain amount of land into the market, and having regard to that state of things, it would be unreasonable to expect owners to bring trouble on themselves by visits of inspectors in the event of their not getting sufficient offers.

58778A. Mr. Sutherland.—Are you speaking as a landowner?—I am speaking as an occupier of land, and as one who would be affected by compulsion if it was passed.

58778B. At a great many of our sittings we have had direct evidence from the Landowner's Convention from themselves?—I am speaking from what I know and am aware of occurring. Grass land held by statutory tenants cannot be bought, paying the owners and occupiers a fair price, cheap enough to be re-sold at a price which would leave the annuity at all comparable with that paid by the ordinary tenant purchaser. A statutory tenant of a grass farm has a valuable interest in it, and the prices hitherto given for them are based on value, and are not fictitious, as frequenaly happens in connection with small farms. As regards the wholesale appropriation of grass land, the result would be disastrous to the breeders of cattle in Ireland, who in three provinces are the small farmers. These as a rule keep their stock till one or one-and-a-half years old, when they are bought by the store farmer, some of the best being shipped. Take away the store farmer and put breeders on his land, and you will return to the condition of the fifties and sixties, when the fattener had the profit and when the small farmer had to depend on the sale of his corn, which then had not supplies from all over the world to keep down the price as now. The soiling system, as suggested by some witnesses, would not suit this country. In connection with the problem of congestion in East Mayo and West Roscommon, I consider the £10 standard much too high to aim at. Neither the rent nor the Poor Law valuation are any standard for the gross value of the farm in these districts, where so much of the land is reclaimed, and neither the rent nor the valuation represent anything like the actual value of the farm. Consolidating the holdings to £10 valuation or so would mean letting much of the land go back to waste, which is fair tillage land, although it won't grow good grass. It would be much better to leave the holdings smaller and try to provide suitable grazing, even at a distance, for the young stock. That would enable the tenant to keep his means together, and would make his stock more saleable than if fed on the poor grazing provided on an enlarged holding. On the smaller sized holding, provided it was properly striped, and that there was at least a place for one cow, two if possible, and that the tenant was in a position to make the best of his land by proper arterial drainage, the fact of his having to spend part of his time in England seems no hardship any more than is undergone by sailors or fishermen and others, and he has this advantage, that his family are brought up in healthier conditions than in towns. There is no likelihood that the demand for unskilled labour will become less, and the tendency of wages is not to get less. As to willingness to migrate, I am not in a position to speak with authority, but the instance given by a witness where migrants have moved to Roscommon land (which appears to me to be to the Balfe Estate at Southpark, within two miles of Castlerea, and convenient to fuel and water), is no guide as to what would take place under other conditions. I consider the £5 limit in the Act of 1903 a mistake. I would raise it to £10. In the agricultural parts of this county I am not apprehensive that sub-division will take place to any extent. The spread of education and the higher standard of living now aimed at and the willingness to emigrate will prove sufficient to prevent it. A question was asked Mr. Irwin about cattle driving. We have no experience of cattle driving in this neighbourhood, but the Roscommon people are fairly well conversant with the facts. It is not people from a distance who have made attempts to drive cattle; it is small occupiers in the immediate neighbourhood of grass farms. Then with regard to the fuel problem—that is, how to provide convenient fuel for holdings which were carved out of grass farms at a distance from fuel, I cannot see any way of meeting it except to increase the size of the farms, and enable the occupier to meet the difficulties of that class more successfully than if he were a small farmer.

58779. Chairman.—In other words, you think the difficulty of fuel is a bar to small holdings?—Yes, a very serious difficulty. There is also the water difficulty. There is a great deal of the grazing land in this county where the water supply is very deficient. Even on large farms, when dry seasons come, people have to drive their cattle for miles to get the necessary water. If you divide one of these large farms into twenty, it is easy to imagine the difficulties of a small farmer every summer.

58780. Mr. Sutherland.—There will be the same amount of water?—Yes.

58781. The difficulty, then, could only arise through more cattle being there?—Well, you can give cattle water you could not give ordinary people. A water supply suitable for cattle might not be suitable for domestic use.

58782. No, but the same sort of water could be got as was there before when it was peopled?—Yes, but, as a matter of fact, that reminds me. It is a mistake to suppose, so far as recollection can go, that these tracts of grazing land, so often spoken of, in Roscommon, have been thickly populated in the past. So far as I can ascertain, they have been in grass—so far as reliable records can go. In Arthur Young's time, in 1776, they were in grazing.

58783. That is only as yesterday?—About 1832 there was a Mr. Weir, who made an inspection of this county, and he found this big tract of grazing land in the centre of Roscommon, with even larger farms than are at present.

58784. There is history older than Mr. Weir. But beyond that there is proof on the face of the soil itself, Mr. Walpole?—I think I touched on that.

58785. To-day did not we see ridges and furrows on hundreds of green fields as we came along to Strokestown from Castlerea?—I think I touched on that. There were corn laws and bounties and artificial conditions which might have had the effect of encouraging tillage.

58786. Yes, but in presence of this material evidence there is no need of speculation at all. Surely, if anything is clear at all, it is the marks of the old cultivation of the land. Then with regard to this, I

was just going to ask you another question. It is only of a general nature. You say after the land was allowed to go back again it went to its natural use?—Yes, considering the natural difficulty of working strong clay land, and considering that although you may profitably work strong clay land in a fairly dry climate, you certainly will not do it in a wet climate like this.

58787. What interested me was your supposition that the natural use of land was to allow it to produce without any labour?—This particular sort of land, under the present conditions. In the other classes of holdings——

58788. If you used the words "economic use" I would perhaps see a reason for it?—That may have been my meaning.

58789. Well, if it is, I am sympathetic. You do not want to allow land to lie waste in that way?—I do not call it waste.

58790. I suppose in your school days, you learned, like us, that there were three stages of society—the hunter, the pasturer, and the cultivator. That was the order of progress, wasn't it? And if you go back from the cultivator to the hunter stage, or to the pasturer, is not that retrogression, and not progression?—That is so, but with improved means of communication, land which would have been cultivated, and happens to be convenient to markets, is driven out of cultivation by the produce of land which, although distant, is more suitable for the growth of corn.

58791. Yes, of course, that would, perhaps, be best covered by the word you are ready to accept—"economic," because at this time political economy was not invented, say, in the time of Brian Boru?—We have no records.

58792. CHAIRMAN.—Are there any traces on these lands about here of the former cultivation?—As a rule there are—the ridges and furrows.

58793. Is not that evidence that they were tilled at one time?—It is evidence, but I think that may be explained by artificial conditions such as high corn duties and bounties.

58794. You think there was a temporary tillage just at a time of unnatural conditions?—That is the explanation that occurs to me.

58795. Now, for instance, take the plains of Boyle. The plains of Boyle were thickly populated at one time, were they not—not within living memory, but they were cleared after the Famine, weren't they?—I do not think so. Of course I cannot speak with absolute authority on the subject, but so far as my knowledge leads me to any belief, I do not think they were. Certain farms were very likely cleared, and I know farms which were cleared after the Famine time from time to time, but as a rule the grazing lands were away from fuel and away from water, and that at all times has been a difficulty in the way of small farms. About these grazing tracts, my belief is that they were not occupied as tillage.

58796. Mr. O'KELLY.—So, Mr. Walpole, it comes to this, that the motive for clearing these farms was the absence of fuel and water?—If they were cleared.

58797. But did not you say you had, in your mind's eye, some farms that were cleared and that the reason they were cleared was that there was neither water nor fuel?—I certainly did not suggest that.

58798. I apologise if I am wrong. Well, what do you suggest?—I do not suggest any particular reason at all. I merely mention the fact, but I said that my belief, and what I understood, as the reason why these lands are in grass, and have been in grass, is that the difficulties of fuel and water were in existence then and are in existence still.

58799. Fuel and water had no relation in your mind to the clearances?—Oh, dear, no. The only thing is that the people who had not these conveniences were in a worse position to stand the strain of bad times than those who had.

58800. Then, I understand, there were no clearances on the plains of Boyle?—I do not say there were none, but the plains of Boyle had the name of a pastoral district before the Famine.

58801. Mr. BRYCE.—Does Arthur Young give any account of the country or only talk of it generally? He travelled through the country. He stopped here, and gives a number of particulars of the condition of things at that particular time. He speaks of the land about Strokestown, where held by small tenants, as being held very much in rundale: A farm of 200 acres would be held by, perhaps, ten or twelve people, and the different plots mixed up together. Then, he goes on to describe the big grazing tract in the centre of the county, and the farms were very much larger than they are now. They went into thousands of acres instead of hundreds.

58802. Mr. BRYCE.—The small holdings he describes were on the land to the east of this?—Well, say the land about five miles around Strokestown.

58803. And it is still more or less in small holdings?—It is principally in small holdings.

58804. Is it grazed or in tillage?—The greater portion is grazed and meadowed.

58804A. What kind of size?—Well, the average. I might not be very correct in giving an average, but a thirty-acre holding is not very common; and they run down to ten, and some to five acres. But I should say the average all round would be, perhaps, twelve or fifteen statute acres.

58805. Now, are there any difficulties about water and turf here?—I should say not.

58806. Because they are nearer a bog?—As a rule, they are near the bogs, and there is a water supply in almost every district immediately around here. There is water to be had.

58807. It is limestone around here?—It is limestone, but it is not continuous limestone, there being much moory and alluvial soil in the river flats.

58808. So that the grounds for difficulty that you apply to the county generally do not exist here?—In the west part of the union they do.

58809. If the conditions of turf and water were the same in the rest of the county as they are here, you would not see the difficulty you do see in breaking up the large ranches?—I would not see the difficulty if the conditions were the same as five miles around Strokestown. It is a thing that could be done; and I could look forward to seeing the people settled on such farms doing very well.

58810. Take the small holdings. How do they work? We have had evidence from Mr. Irwin and you that the doing away with the large farms would be disadvantageous to the small people. What do they do with their cattle? Do they send them on to the large ranches to finish or do the whole themselves?—They send some to the grazing farms to be kept until they are one and a half years old. They feed them altogether themselves until a year old. Then they put them out to grass, say, for six months. At the end of that six months some will sell. Others will keep them on; tie them in, and sell them as two-year-olds. Those who produce good stock, and who feed them well from a year to a year and a half—the bulk of these are bought for shipping to Scotland. There is a very considerable demand in this part of the county for good, well-bred stock in Scotland.

58811. For finishing?—Well, they are finished before the next summer. They are tied in.

58812. If these large farms in the middle of the county were divided up would that be a disadvantage to the small holders near Strokestown?—It would be a disadvantage in its effect on the cattle trade as a whole. If there is harm done in one part of the country it spreads over the whole. If prices are lowered in one place they are lowered in another, and reduction of price in a place where cattle could not be got ready for shipping at an early age would be felt here.

58813. Leaving aside the question of price, would it affect the manner in which these small holders near Strokestown deal with their stock. Suppose the large farms in the country and in the county were broken up, instead of putting some of their stock on to those large farms, what would the people do then?—My opinion is that they would have to restrict their production.

58814. Or sell younger, perhaps?—They would not have a demand younger. They would have to restrict their production, I think, so as to enable them to feed a little longer.

58815. In some parts of Ireland—we found in the North—that a great many of the cattle are sold young—under the age you describe—at six months and one year old to the dealers in Scotland?—I was not aware that was done in the North of Ireland. I know calves go from the South of Ireland as weanlings. They do not go from here as weanlings. The reason is we want them here.

Oct. 8, 1907.

Mr. W. J. Walpole.

58816. Well, in Donegal there is no grazing convenient, and with regard to a great deal of their stock they must sell at once. They must dispose of them there. Now, suppose that circumstance was forced on the people here, of selling younger than they sell them now, that would be a disadvantage?—It would be a decided disadvantage. I look upon it that the more cows they are able to keep the better, and if they cannot dispose of their young stock at a reasonable age they would have to reduce the number of cows, and that, I think, is a disadvantage. The fact that they are able to keep more cows enables them to keep more pigs, and, as a matter of fact, pig-feeding is the most profitable branch of all agricultural industry.

58817. On these small holdings how much proportion of tillage will a man have?—If he has 15 acres, well, the man with more than two acres of tillage is uncommon. A good many have up to two acres, but beyond that is uncommon, no matter how large the farm.

58818. Two acres out of 15, or two out of even 60 acres?—Yes, just as likely, the amount of tillage being more dependent on the size of a farmer's family than on the size of his holding.

58819. But there are people who say it would be an economic advantage if you reduce the holdings to something like 20 acres, and therefore by having ten holdings of 20 acres instead of one holding of 200 you would have then 20 acres tilled instead of only two?—Well, I cannot follow that argument exactly. If you reduce the size of the large holdings you still propose to increase the size of the small ones, and I think you come to pretty much the same result.

58820. No, there would be a larger number of people on the ground, and each would be doing two acres of tillage, instead of one man doing two. There would, therefore, be a great deal more labour on the land, and a larger production of the fruits of the ground?—That would be so if you did not relieve the existing congestion, but on account of the very small size of some of the holdings, you see you would have still two acres out of five, whereas if you extend that to 15 acres you would still have only two out of fifteen.

58821. I presume that is done in the interest of the relief of congestion and the necessity of an increased size of holdings. But it does amount to that, and the disadvantage which these people near Strokestown would suffer by the alteration in the course of trade might compel them to go in for additional tillage?—Well, economic tillage—what I call horse tillage—is also a lost art in this country.

58822. Is there any reason why it should not be revived?—Well, personally, if it could be done, I consider it would be an advantage.

58823. Most of these people have got a horse?—Oh, no.

58824. Well, a great many of them, and a man with a horse might go in for ploughing?—Those who have horses take advantage of them in the way of ploughing and harrowing.

58825. If the others had their holdings enlarged so that they could use a plough would not they do it, too, if they saw it was economic?—They would, but where you have strong lands with strong grass it takes a great deal to induce people to venture into tillage.

58826. Sir John Colomb.—I take your first two paragraphs in the summary of evidence with which you have supplied us, and the opinions based thereon to apply only to deep, strong land with deficient water supply and remote from fuel?—That is so as regards the possibility of successful creation of small holdings.

58827. When Lord Dudley asked you were there any evidences of former cultivation you answered yes. Is the Commission to understand that on these deep strong lands there is much evidence of former cultivation?—It is not universal. I have been over, from time to time, a great deal of the land of Roscommon. I know all in the centre of the county pretty well, but of course when under grazing I could not take upon myself to say where one farm had an original furrow on it, and another had not. It is not universal, this ridgy, furrowy appearance.

58828. May I take it this way that the evidence of former cultivation in ridges is more largely found upon land of a different quality than the deep strong land?—That

58829. Now, even taking those signs of cultivation, and their appearance on lands of a quality less suitable to grass, of course you allude, for their cause, to the effect of the Corn Laws and high prices during the Napoleonic wars. Now, was there not another reason for the cultivation of that land from this cause, that in order to live and produce food it had to be produced locally by reason of the total absence of means of transport?—Well, now that you call my attention to it, that is quite plain to anyone who recognises circumstances.

58830. In this way that the products of the land for human sustenance were localised to the extent that competition was the competition of local produce in Ireland?—Yes.

58831. But, now, putting aside all physical questions, the development of means of transport brings the tiller and producer of grain and other tillage crops not merely into competition with his fellow-producers in Ireland, but with the whole world?—That is so. It is well known and recognised that all local industries in Ireland have been destroyed by the improvements in circumstances, and I see no reason why the same result should not have happened to the user of land. The effect has been that the land easily tilled and cheaply tilled and productive has remained to be used as mixed farming, and this other class of land is turned to the other use and remains in grass.

58832. That the land best suited for mixed farming can to a better degree stand this world-wide competition than the inferior land that is beaten out of cultivation by it?—That is undoubtedly the case. Any man having land, if he is a wise man, looks all the difficulties in the face, and endeavours to use it in the most profitable way. In connection with that, I do not think the Roscommon people are such incompetent people as they seem to be represented. I think where they have turned to this use of the land they have very good reason for it.

58833. Now, do you think this is a fair inference to be drawn from the fact of there being observable signs of cultivation under totally different conditions as regards fiscal policy and as regards transport—that you cannot base on that a sound argument that because they were once tilled it would be in any sense right to till them now?—That is not a conclusive argument by any means.

58834. Passing to paragraph 5, you say, "The holders of 11 months' land are not so much the graziers who have always been such, and their predecessors before them, but are, as a rule, successful cattle dealers and small farmers who, by energy and good management, save money, and find this a convenient way of extending their operations." I want to ask you do I construe the meaning of this correctly when I take it that it gives an outlet for the profitable employment of capital in Ireland to the thrifty and industrious Irishman. Is that what you mean?—That is the deduction that I wish to be drawn—that it enables a man in a small way to extend his operations and find an outlet for his greater capacity and, of course, also for the capital, the result of his industry.

58835. The man by his thrift and industry accumulates a little capital, and he uses his brains and his capital in this way?—Yes.

58836. Therefore you apprehend that to that extent, as far as the grazier is concerned you would be shutting the door to the employment of capital in Ireland by the thrifty and industrious Irishmen who employ it in that way?—You would make it more difficult for an industrious Irishman to improve himself.

58837. And it would shut the door to the employment of capital so required? You are really compelling him, or at least you are limiting him, and the tendency would be to make him send his money out of Ireland?—Yes; the capital of the men I describe.

58838. Now, with regard to paragraph 6. You speak there of the willingness or unwillingness of landlords to sell. May I ask you this? You have dealt with the eleven months' man and the grazier, but is not a very large quantity of the grazing land of Ireland in the hands of men who formerly had leases, and who really now are tenants from year to year?—Who are present tenants you mean.

58839. Who hold the land by yearly agreement, not for eleven months, but who hold the land from year to year from the landlord?—That is so here in Roscommon. In a former paragraph I think I mentioned that. In paragraph 4 I alluded to that where I say, "The non-residential grazing farms are held

n various ways. Some as statutory tenancies, some purchased much if it under yearly lettings or short leases, and some on the 11 months' system."

58840. Very well. Those men by the acquirement of land by authority are excluded from their business?—Yes; their occupation is taken away from them.

58841. And where the landlord has his grazing land occupied in that way, either by short lease, or from year to year, there is an honourable understanding that so long as the rent is paid the man will hold on from year to year?—Yes, from father to son.

58842. May it not be a very considerable reason for weighing with the landlord against an inclination to sell his land that he would be breaking an honourable understanding, and that these men would be cast out of their work and their employment?—I am sure it is. There is a sympathy and connection between the owner and the family who have been, say, holding the same land for years and years and years, which the owner does not care to upset if he can possibly avoid it.

58843. And therefore it may be that the unwillingness of the landlord so situated with those who have gone on from year to year under him to disturb them and perhaps ruin them, may be one of the reasons for that landlord refusing to sell?—It is one reason; it is not universal. Everyone would not have that reason. The same person might have to look at the matter from other points of view, but it would be a strong element.

58844. It would be a reasonable standing ground for a man to take?—It would not be unreasonable.

58845. On paragraph 11 I merely wish to put you this general question. You state that neither the rent nor the poor law valuation is any standard for the gross value of a farm?—I state that from my own knowledge and experience.

58846. And I suppose as regards valuation you will agree that valuation of the land made sixty years ago and never changed since cannot by any means be a real indication of the value of the land now?—It is not a correct standard.

58847. Mr. Bryce.—You talk of these tillage plots that the small holders around Strokestown now have averaging about two acres?—Well, I gave that as the best idea I could get.

58848. Well, now, that consists of what?—I suppose there is generally an acre in potatoes or something like that. The first green crop a man has in his mind is the potato crop, and he endeavours to have anything up to an acre or so of potatoes if he can.

58849. That would be used partly for the family and partly for pigs?—Yes.

58850. Then the rest would be perhaps some cabbages and turnips, and perhaps some oats?—Well, the green crop is nearly all oats, and very little cabbages are sown except in gardens.

58851. Would not there be a green crop as well as potatoes—something like turnips?—Well, there is a fair amount of turnips grown. I suppose half an acre would be the outside.

58852. He uses the turnips as winter feeding?—Yes.

58853. And the oats he sells?—The oats, as a rule, he sells. He has meal made of some of it, but as a rule the oats are sold here in Strokestown, and in connection with that I might mention a curious fact. In Strokestown market the principal buyers are the small farmers in the western part of this union, from Elphin and Tulsk directions. They buy from the farmers around here who have the oats to sell. They buy the oats they require instead of growing them themselves, so that practically there is no export of oats from this market. The district is only just a self-supporting one.

58854. That oats they buy—is it used for making into meal?—For feeding their horses or feeding their cattle.

58855. There is very little meal now used in the families?—Not very much home-grown meal. My father when he came to this part of the country built a mill, and from 1870 until about 1895 or so, we carried on milling, but since then so few people brought their oats to be ground that it was not worth while keeping the mill going, and it had to be closed down.

58856. The people now instead of using oatmeal use flour?—Yes.

58857. Which is not an advantage?—I do not think so myself. I think the more mixed diet was infinitely better.

58858. Mr. Sutherland.—Just one question or two. May I ask you if the grazing tenancies are frequently changed?—The yearly tenancies are not.

58859. Have you known any of them to be terminated at all?—Oh, most undoubtedly.

58860. And does the landlord show much practical sympathy with the man whose lease is determined?—He is an exception when he terminates, and as an exception he does not show much sympathy.

58861. Then it is true that the greater part of the grazing land is held under the eleven months' system? In this county or district it is not true.

58862. It is the smaller quantity that is so held?—That is my opinion. I cannot give you figures. I speak from general knowledge.

58863. The rule and principle of eleven months is change at the end of the eleven months?—It means that you are open to change.

58864. But as a matter of fact that distinguishes it from a yearly tenancy?—Yes, it means a legal renewal.

58865. So that really after all these grazing farms do not seem to be held under a very secure form of tenure?—No, not secure.

58866. Just another question. You admitted in reply to a question of Sir John Colomb, what of course I take to be practically true, that the improvements in communication having put you in competition with agriculturists all over the world have led to the decrease in the cultivation of the land?—That is my opinion, and I think it is borne out by facts.

58867. I just want to point out to you that that involves the admission that the land was cultivated. It could not have gone out of cultivation unless the land had been cultivated?—Well, the figures are before us, and I do not know that they go back—I am sure that they do not go back a hundred years—but the figures are before us for the last forty or fifty years, and the figures both here and in England, and I should say in Scotland too, show a reduction in cultivation.

58868. Not in Scotland. There is an increase in Scotland?—Well, there is a decrease in England.

58869. Very little?—Oh, there is. I beg your pardon. The proportion of decrease may not be so large as here.

It has been arrested very largely of late years.

58870. Mr. Bryce.—You are aware that some of the land of England went out of cultivation as early as the reign of Elizabeth. I mean the land about Northamptonshire. There is historical evidence that that land has never been cultivated since the days of Elizabeth. It has been in pasture since?—Well, I can quite believe it. It gives good grass I presume, and I presume it is heavy strong land.

58871. Yes, it is. Just one question about fuel. There is a coal mine not very far off, in Arigna?—It is a long way off. But it would not be so very far off if there was a railway, which it is proposed to make. That would bring the fuel from there within easy reach, and I may mention that a number of people on the Elphin and Tulsk side quite looked forward to the possibility of communication between this and the north of the county on this very point, because although this district has a fair supply of fuel at the present time we are very nearly at the end of it, and it really will be a pressing problem for the whole part of the district west of Strokestown before very long. That is one reason why I cordially agree with the remarks that were made by Mr. Neary, the chairman of the District Council, that if this district is to hold its own as an agricultural community it is absolutely necessary that we should get assistance from the Government for a railway communication.

58872. That is generally, but it has got a particular interest with regard to this question of fuel?—Yes, it has undoubtedly.

58873. That would be a reason for urging upon the Government the construction of some line that would make the Arigna coal more easily available?—It is a very strong reason why they should seriously consider any representations from the Commission. I should just wish to say in connection with the question

Oct. 3, 1907.
Mr. W. J. Walpole.

asked me by Mr. Sutherland as to the possible treatment of eleven months' occupiers by the landlords, that although they have no legal hold—if the State comes in even in cases of that sort and takes away what a man has not even a legal right to—there are precedents, and very recent precedents, where they thought it right to compensate the person from whom this easement or right was taken, even although only a temporary right was enjoyed.

58874. Sir JOHN COLOMB.—That anticipates largely the following question I was going to put to you. I suppose you would accept the general proposition that the State in carrying out a general policy ought not to inflict injury and loss upon any class or upon any individual without his being fairly and reasonably compensated for the loss?—It is the right principle, and it is the principle on which, I think, the State has been in the habit of acting, and which it appears to accept elsewhere anyway.

58875. That being the case, and taking the case of the short lettings and yearly leases of grass lands, don't you think it must be a very fundamental question in carrying out this State policy that their equitable claims should be met by the State?—They should be met in a fairly reasonable spirit if the State wishes to have the reputation of justice and fair play.

58876. Now, applying that a little more closely. The Government for the purposes of the State acquires an area with the view of giving economic holdings to tenants? I presume you, for economic reasons, would only use the land of an area so acquired that was suitable for the tillage of the small holder?—If the State acts with prudence that is the line it will take.

58877. That is what I mean. Therefore on that estate there might be this area, and there might also be the good strong land which, from an economic point of view, should not be broken up?—Yes.

58878. Now, supposing that area was held under a yearly letting—I mean the whole land—or on a short lease, do not you think a possible means of carrying out an equitable system might be that in disturbing the short leaseholder or yearly tenant of these lands it would be an equitable and fair arrangement if the compensation was found in this form, that having found the land that was suitable for the fixing of small holdings, the grazier or short leaseholder, or year to year man, might then have reserved for him and given him a settled tenure on the lands that were only fit for grazing?—It would be a very good compensation, and one that would commend itself as a suitable way in many respects, and I might say that in the evidence given by Mr. Irwin we had an incident which bears on it very much. The herds of that farm in Ballaghabaw Beg had their occupation taken away from them. As compensation—for such you may call it—one was given fifty acres and the other twenty-five acres.

58879. Do you not think that if the principle indicated and illustrated by the case I have given you was carried out by the State it would get rid of many of the difficulties in opposition to their policy?—It would make the scheme a more generally popular one. Of course at the present time, numerically speaking, it is a very popular idea, but you would enlist the co-operation and sympathy of all classes if a fair scheme of compensation were settled on and could be depended on.

58880. Mr. KAVANAGH.—I see you are in favour of common grazing?—I think it is a far cheaper method than absolute migration, and owing to the superiority of the grazing which could be procured to what the "congest," as I may call him, would get by the enlargement of his holding locally, that scheme commends itself to me very much.

58881. What distance would you say that grazing could be carried out—how far away from the small holdings?—Distance is not much of a difficulty. The grazing is a matter of six months, and a very odd visit would be enough; in fact, some people who put their cattle out in May do not look at them until November; they are in charge of a herd or owner of the land where they go, and what makes it more advantageous is that the Congested Districts Board introduced a system this year by which, on the owner of the beasts paying a small sum for insurance, they undertook up to a certain sum to be responsible for the safety of the animals.

58882. That land, of course, would be held by the State, or would it be held in common by the tenants?—It should be either held by the State or by some body like the Congested Districts Board. It is a matter which could be easily arranged in detail, and it would be an extremely good thing to be carried out.

58883. Would that be better than striping out a portion to each man? It would give more room to the cattle, would it not?—It would be better than striping out the farm, removing half the people ten or twenty miles away, putting them on the striped portions, and dividing what remains among the half that do not move.

58884. Some witnesses have suggested to us that the friction would be too much—that they would be always fighting among themselves about this grazing, and that it would be better to stripe out each man his own portion?—I do not think that would be so practicable, and the water difficulty would come in very much also.

58885. I just want to ask you one question more. Under the present system of the cattle trade what is the most profitable age for a breeder to sell at?—I should say about a year and a half old. There is a great deal more money in the business that way. You get more return for the food the beast eats up to one and a half years old than you do afterwards.

58886. Is not that rather an unnatural price, for stores to be so high in comparison with what they fetch when they are sold as fat beasts?—I do not know what you mean.

58887. It is high in proportion to what you could get if you sold the animal as a three year old. Is not that so?—It is this way, that if you take a year and a half old beast, and treat him well all the time after that, you will dispose of him at an early age, and at a better price in proportion than you will if you keep him on, let him get hungry—well, not hungry exactly—with a poor, unsheltered place to lie on, so that he does not maintain his condition in the winter time. If you do not treat him well you will have to keep him till a three year old. If you treat him well you may sell him at two and a half. I sell many cattle at two and a half, and I do so by treating them well all the time.

58888. Sir JOHN COLOMB.—When I put that question to you about the State recognising the equitable claim of the grazier—of the grazier who holds on a yearly letting or short lease—you gave as an instance that that principle has already been recognised in the herd?—Yes.

58889. Has the herd a year-to-year agreement or a permanent one?—It is terminable on very short notice.

58890. Is it terminable on less than a year's notice?—Oh, dear, yes.

58891. Therefore the case is much stronger by the fact that in settling the land the herd, although his tenure is very much more uncertain than the grazier, has been recognised as having an equitable claim?—It is universally recognised in this county where any land is divided.

58892. Therefore the argument is all the stronger in favour of the equitable claim of a grazier who holds, and has held year after year on a yearly tenancy or a short lease?—The claim is much stronger—it is very strong. I suppose it could not be much stronger.

The O'CONOR DON re-examined.*

The O'Conor Don.

58893. CHAIRMAN.—I understand, O'Conor Don, that you wish to give us some supplementary evidence?—Yes. I gave evidence at some considerable length in Dublin,* and I then expressed the view that there was a very large quantity of grass land available for division in the County Roscommon, and, as suggested by Sir Antony MacDonnell, I agreed to make further inquiries into the matter. Since then I have taken a very great deal of trouble to make those inquiries. It has been very hard to get a list of owners—there are some blue books that give names, but not a complete list—notwithstanding that, how-

* For former examination see Appendix to the Seventh Report of the Commission [Cd. 3785, 1907], p. 231.

ver, I have been able to communicate with a large umber of owners.

58894. All in the County Roscommon?—They are ll owners in the County Roscommon, but a few of iem have their property just hanging over the nder, but you may take them substantially as being wners in Roscommon. I have not communicated ith any owner outside Roscommon, but I have done hat I could to find out what land was available, nd I have suggested to owners that they ought to be asonable. I rather impressed that upon them.

58895. Assuming that they might not be reason- ble?—Well, there might be a few, but I think I ave done more than anyone down here to get grass nd made available. My inquiries have been ad- essed to a comparatively small portion of the wners, because a man like myself cannot get at eryone. We cannot get at what is in process of le, and it is hard sometimes to get at the man who as the right to sell a particular portion of land. I ppose I have inquired from some thirty or forty wners of land, and the result of this has been that have here a list of grass lands that could be sold, nd the owners are willing to offer either to the Con- sted Districts Board or the Estates Commissioners buy. They are willing to offer something approxi- ating to 12,000 acres. In answer to Sir Antony acDonnell I suggested 10,000 acres as being imme- ately available, and probably about 40,000 acres together. The result of my inquiries shows that I ave rather under-estimated, because I have ap- oached a very small number of the owners, and I once got a list, with prices and everything from wners of 12,000 acres. The owners naturally made a condition that their names should not be dis- osed for obvious reasons, but I think nearly every- ne of them said they were willing to have their nds inspected. I have this list showing the names, or law valuation, and terms of everyone of these wners. When I say everyone, there are three I have ly been able to give in round numbers at the end, t there are some 21 owners that are willing to sell tween them 12,000 acres at once, and what I main- in is that until these 12,000 acres have been bought ere is no need for compulsion. These are all lands at I understand the Congested Districts Board uld deem suitable. They are not waste lands or lueless lands, but they are all substantial grass nds. I have seen a list that the Congested Districts oard had made out, and the large bulk of these nds are on their list.

58896. CHAIRMAN.—I do not think there is any ubt about it, you ought to be a member of the ngested Districts Board?—I will hand in is list, and if you wish to ask me any estions about any portion of it I will swer them, only I would ask you to refer the number in the margin which refers to ch name, because I undertook to the owners not to sclose their names. There are three without num- rs at the end, and you can say, if you wish to ask y questions about them—No. 1 or 2 or 3 from the d. This is the list. (*Produced and handed in.*) course, that list cannot be published because it uld not be fair to the owners who have given me information. You can see that the terms of pur- ase vary tremendously. They run from 20 years' rchase to capitalisation of net receipts at 3½ per nt. That is a very usual term. I have one small wner wants a very much larger price, but taken as whole, there are very few, if any, who ask for more an net income capitalised at 3½ per cent.

58898. Mr. SUTHERLAND.—Can you give us that in ars' purchase? Is the average 20?—I could not say at the average is. I will read them out if you e. I may say that a great many of them say to —"We could not sell you a particular piece; you st take the whole land or none." Some of these ve tenants, but most of them have none. No. 1, r instance, says she would require to sell the ten- ted land as well. I happen to know that case very ll myself, and it is not congested in any way. In o. 2 the owner wants 27 years' purchase of net in- me, and he would be willing to pay possibly for e tenants' interest. I know the tenants are large ople, and I know they could be settled with very reasonable terms. There are only two or ree, and I have no doubt there would be little diffi- lty. There might be difficulty with one man. an No. 3 says 28 years' purchase; No. 4, 20 years' purchase and bonus, and the receipts come to £100 off land valued at £60.

58899. CHAIRMAN.—Can you give any explanation why there should be such a large deviation between Nos. 3 and 4?—Yes, I think I can. No. 3 has his land let at what I might call a low rent. You see in No. 4 the rent is a very high rent compared with the valuation. That is probably the explanation. No. 3 has this land let for a considerable time probably, whereas No. 4 is getting the full value. Both have small quantities, but No. 3 has already sold the large bulk, and this is only the residue; whereas No. 4 is an owner that has not a great deal of land, and I think, as a rule, small owners—people like shop- keepers and so on—expect higher prices than the larger owners. At any rate, that is the result of my inquiries. I think you will find it so. No. 5 asks 24 years' purchase and bonus, and he is offering the land for sale to one of the bodies. No. 7 wants 27 years, and bonus, and is offering it like the other. No. 8 has offered, but has got no answer, and says he will do nothing more. He offered it a considerable time ago. I have letters from all these people and I have written on the margin of the list summaries of these letters.

58900. Sir JOHN COLOMB.—Are we to understand that the offer has been to the Congested Districts Board or to the Estates Commissioners?—No. 8 offered to the Congested Districts Board, but got no answer. He offered it a considerable time ago. No. 9 is a case that has been already discussed at length, so I do not know that there is very much harm in mentioning the name—Major Chichester Constable. He says the price offered to him is altogether too low, because he wants his net income or something ap- proaching it. I understand, although I do not know it directly, that there are charges on the land, and that he gets a certain amount out of it, and if he accepted the price he would get absolutely nothing. It would not pay the charge. No. 10 is in negotia- tion. No. 11 is willing to sell. No. 12 has offered, but the offer has been refused. I understand the Congested Districts Board refused a certain amount of land that they would now be willing to buy. I think they were very short of money at the time. In fact I think it was openly stated about a year ago that they were so at this time, and consequently a good many of these people who then offered might now be dealt with if they offered—probably with a renewed offer they might deal with them. But at the time they offered the Board had no money. No. 12 wants 23 years' purchase and bonus, and some of the land is occupied by tenants, and they would have to be dealt with. Of course the Board have power to deal with the tenants wherever they buy. They have already had it under statute. No. 14 quotes a lump sum which is a pretty high one. The estate is a very small thing. I think the owner is a shop- keeper. No. 15 would sell on the basis of his income, but he does not tell me what. He writes a long letter. No. 16 is very small, and he only says he would sell at a fair price, whatever that means. No. 17 expects 25 years' purchase of the poor law valuation, and in his letter to me he said there were some charges that he always paid, and he would allow them to be de- ducted in calculating the price. No. 18 expects a lump sum, which he quotes, and No. 19 asks net in- come capitalised at 3½ per cent. No. 20 wants net receipts taken as a basis, but I understand he would be willing that they be capitalised at a good deal lower figure than 3½ per cent. He has not given me an exact figure, but he has written me, I think, twelve pages on the subject.

58901. Mr. BRYCE.—By a lower figure you mean a lower rate of interest?—Yes. He has written me twelve pages on the subject, but it is very hard to get an exact figure from it, but he would sell on quite a reasonable basis of net receipts, and there are negotiations going on about it. With regard to the last three, I have spoken to each of them, and they all tell me that they would sell, and I know that they own a substantial quantity of grass land between them, but they all own tenanted land as well, and they would want both taken. I do not think myself it is at all an unfair demand to say "You must take all or none," because it creates great difficulty and ill-feeling with your tenants if you take grass lands for distribution not amongst Roscommon men, and having a tenanted estate, not to sell that. Your ten- ants would be up in arms against you. Therefore they ask that it should be taken as a whole. They are not

Oct. 3, 1907.

The O'Conor Don.

congested estates, and there are not many small holdings on them. These are the best figures I can give you at present. There are probably a few of that 12,000 acres that you might say ought not to count for some reason or another, but since I made out that list I have had other replies, and I could add another 1,000 acres to make up for what you might strike out. So I can now offer 12,000 acres, and I have no doubt if that was bought and paid for at once you would have a very much larger quantity available. I may say that nearly every one of those owners in writing to me say they could not sell unless they were to be paid in a reasonable time. If it means waiting four or five or eight years it would be impossible to sell. I have had pretty few refusals out of those I have referred to—about half-a-dozen, and one of them who is largely interested in the matter says he will not offer anything, because he says he would not be paid "for no end of time," and he could not afford to wait. So he is not in the list.

58902. Mr. Bryce.—Why do you think the owners of untenanted land should object to delay? I could understand the owners of tenanted land making an objection to delay in payment, but why should owners of untenanted land make any objection, considering that all the evidence we have had from owners of tenanted land is that the price of untenanted land is not going down. Therefore, why should they not get their income in the meantime. I could understand, as I say, the owners of tenanted land objecting to delay in payment?—I have had the experience of that myself as regards untenanted land. I have sold a considerable portion of untenanted land, some 300 or 400 acres, and the result on your farming operations has been that you do not know when it would be taken over, or what to do in the interval of two years that the thing was pending. The profits on that land consequently have been almost *nil*.

58903. But if you had set it on a yearly tenancy or eleven months what does it matter. You go on letting it on the yearly tenancy. How do you suffer from the uncertainty?—Take the yearly tenancy, as you have mentioned that first. The Congested Districts Board would require it handed to them clear of tenants. You would have to give that man notice for a date.

58904. Chairman.—Cannot you arrange with the Congested Districts Board that you would hand it over to them on the 1st October or 1st November, the usual date?—I was talking of the yearly tenancy first. I will deal with the eleven months in a minute. In the case of the yearly tenant you would have to give him the statutory notice, and you may have him throwing it on your hands at the expiration of the notice. He might say—"I cannot farm this land, not knowing what minute I may be put out."

58905. Mr. Bryce.—Why should not you make a conditional sale to the Board or the Estates Commissioners at a definite day, or, say, "My offer is conditional on your telling me whether you are going to take it at a certain time beforehand." Why should not you make that a condition?—That is exactly what owners require.

58906. Supposing they made it under those terms why should they object to delay in payment?—Do you mean that they would take it over on that day?

58907. Yes, and pay on that day?—I do not think then they would object, but that is not what the Board will say to you. The Board will send down a valuer and there will be a great deal of negotiations at first. Then the matter will be hung up. You will hear nothing. You may not get your letters answered. That is what a good many people complain of. They are not told when the land will be taken. If they were told "this day twelve months we will take it and pay you" it might be all right, but what they do say is, "We will have a contract on some future day, and we do not know when we will be able to pay you." I have heard eight years suggested. In fact, if the Government were to carry out its present obligations, without raising any more money—raising merely the five millions a year—it could not do it before the eight years. Another thing an owner objects to is the uncertainty of whether the land will be taken, because you are left in doubt. There are cases where negotiations have been going on for years. I myself have had a contract to sell land to the Estates Commissioners, and when they came to divide it up they said "We cannot get tenants for it," and they handed back 140 acres. We say we do not want that. We want to have absolute certainty if they want to get the land. My father offered a large quantity of land to them, and after two years—after it was all split up, and I think the numbers showing how it was to be divided—it was handed back to him. "We are very sorry we cannot take it," they said. I say that is not the sort of treatment that we ought to expect.

58908. Does it not occur with regard to almost every commercial transaction you can name. Those difficulties occur from day to day, and I cannot see why they should not be got over with the greatest ease?—I am not of course disputing your account of what happens. I think they can, but I say, if you want owners to sell, you must get over them. You cannot expect owners to come forward and leave their lands in a state of doubt.

58909. The indefinite option, certainly?—That is what the owners say, and that is what I call delay. Give them a definite contract, and say they will pay on a definite day.

58910. Or pay you interest. You understand the financial difficulty at this moment is very great, and the owner, if he makes an agreement to be paid on a certain date, should be either paid or should receive an amount of interest until the money is paid?—Excuse me, it does not come to the same thing. It comes to a very different thing. If you pay $3\frac{1}{2}$ per cent. interest to a man who has a mortgage, and he is paying 5 per cent. on his mortgage and only getting $3\frac{1}{2}$ per cent. on his money, it is a serious position.

58911. Quite so, but I am presuming it is acting up to business. The agreement should be either "Pay me a certain rate of interest, and if I am not clear pay me the mortgage interest." I can see the whole point?—That is only what I am arguing.

58912. I say there is not one of these difficulties that, in a fair commercial transaction, could not be got over at once?—I quite agree, but the complaint is that there is no money.

58913. Sir John Colomb.—Your complaint is that it is not on the usual commercial basis?—Yes. I am not saying this cannot be done, but I am saying that owners are dissatisfied with the way in which it is done.

58914. You are giving a reason why landlords object to put their heads in a noose?—Yes; and I say these owners that I have got here, even under present circumstances every one of them is willing to offer, and you would have a very much larger number if you dealt with them in the way Mr. Bryce suggests.

58915. Mr. Bryce.—I cannot conceive their being dealt with in any other way?—Well, they have never been dealt with in that way—only in the way I tell you.

58916. It is perfectly ridiculous?—That is the way they have been dealt with, and that is what has caused part of the trouble. Of course what has added to the trouble is where lands have been inspected and not taken. Everyone of those owners I have on my list has told me he is willing to allow inspection. They are a very small proportion of the owners. I do not doubt with a little more trouble I could get a much larger quantity. This is only what a private individual can put before you.

58917. Mr. Sutherland.—Is it your opinion if the Irish Government made the same effort again to ascertain the names of those willing to sell, they would have a greater prospect of success if a second effort was made, than which Sir Antony MacDonnell has told us of already?—Well, yes, if they are definitely told that the price will be paid at once in cash. However, I do not suppose there is any harm in my stating this:—They are making the effort, and they have communicated with a large number of those same people.

58918. That may have arisen from your own evidence before us in Dublin?—I may say that I have supplied them with a list of people who were willing—I mean I supplied someone in authority with it—and they know pretty well all the names on this, and are communicating and have communicated with a very much larger number than I have, but have not got at all as favourable replies as I have. That I am not at all surprised at, because there is a little distrust and a little feeling on the part of owners that they will not get paid, and they have not answered these inquiries so favourably. But I, in fact know all on that list of mine are willing to sell, and I understand that they have only got about half the list to consent direct. I could easily arrange that they would all consent. That is all I have to say

about that list, but I would like to add a few words to what took place in Dublin when I was examined, because I have seen there has been a considerable discussion about the occupation interest, and some people say where the landlord has land in hand, he has not got the tenants' interest to be paid for as well as the landlord's. Perhaps the better way of putting it is that when he has the land in hand there is no diverse interest to be taken out of it. When it is the tenant's hands there are admittedly two interests. I do not think there is anyone can dispute that. There is the landlord's interest, which is merely the right to take rent; the tenants' interest is everything over and above the value of that rent.

58919. Mr. SUTHERLAND.—I do not like to interrupt you, but are those rights not creatures of statute?—Yes.

58920. Can you point out to me the particular statute under which this right is given to a landlord to the tenant in the absence of a tenant?—If you allow me to continue I can put that plain. The landlord has originally the whole fee simple. Out of that is carved the tenants' interest by statute. But quite apart from the tenants' interest by statute, before the Act of 1881—it may not have been a legal right, but there was a beneficial occupation that the tenant had that sold for money, and that sells now for money where the case does not come in under the Land Acts. That is, no doubt, part of the whole, but where you have land in the one hand you have not to carve that out, and therefore the landlord should get the larger price where he has the whole interest and not merely the enjoyment of a rent. The land is worth—otherwise the tenant's interest would not sell for anything—it is worth more than the judicial rent. The tenant lives by it. That is worth something, and if he puts it up for sale he gets a high price. I think in Castlerea we heard of cases of 44 years' purchase estimated by the Land Commission themselves, and it is absurd to say that where the whole interest has not got that deducted from it, the landlord is to get no more than if he had only the margin.

58921. Look at the circumstances out of which all this legislation arose. Do you remember the circumstances which led to the passing of that legislation. It was, was it not, that the Irish tenant had no security of tenure to begin with. In the second place he had no legal right to the value of his own improvements, which could be confiscated?—Not exactly that, because under the Act of 1871 he had a right to be compensated for improvements.

58922. Take the Act of 1871. Before that there was no legal definition—I am not just now talking about what it might be in equity—but in law there was no such security for the tenant. My point is that the passing of that legislation was directed to the tenant alone, and dealing only with his interest?—I do not dispute that.

58923. I think the whole of that legislation was meant to define his interest, and his alone, and refers only to him?—Yes, but when it defines that and takes that out of the total interest it necessarily defines the landlord's, because it leaves the landlord the rest, and where you have the landlord both the owner and the occupier he has got both interests.

58924. That may be a specious interest, but it did not enter into the mind of the Legislature?—The Legislature did not think of it, but it has accomplished that effect. If I am going to cut up grass lands and let them out I will get large fines for the occupation interest. In practice you will get very big fines for the occupation interest. A man wanting to get in from year to year will pay a substantial fine.

58925. I daresay that could be done before the passing of legislation at all?—It shows that there is a market value for the occupation interest, even where it is not a legal occupation interest—still more so where it is legal. What I say on that point in my memorandum is this. Where land is let under judicial or other rents the owner is merely entitled to his rent, which he cannot increase. The tenant, on the other hand gets all the profits over and above the rent. This right of the tenant is of very considerable value, and is called the occupation interest by the Act of 1881. Where the owner has the lands in his own hands, whether let on the eleven months' system or otherwise, these interests belong to him, and of course he should be paid for them. If the owner were to divide up the lands among tenants, or let them on lease, he would get very substantial fines for the occupation interest. A judicial rent does not represent both interests, but merely the landlord's. There is another point which is not in my memorandum, but which was alluded to in Mr. Hayden's evidence and Mr. Fitzgibbon's evidence, about the Suck drainage. I thought their proposal most moderate, and I think it could be accomplished even without much legislation. I am saying this so that my views as chairman of the Drainage Board may be on record. By adding to the purchase money the amount of the unredeemed portion of the charge, and then making the landlord redeem it out of the purchase money—I am talking of the tenants' charge—you would succeed in getting what Mr. Fitzgibbon asked for, viz., an extension of the period of repayment. You would have it running concurrently with the purchase annuity, and that would extend it to sixty-eight years instead of thirty years, and give the tenants the full benefit of the reduced payment.

58926. Mr. SUTHERLAND.—That would involve no present expenditure of money?—No expenditure to anybody, and I do not think it would involve any legislation, and it would further save the expense of collection, because it would then all be collected as the annuity, and I know from my experience of tenants along the Suck that they would prefer to pay all together than have several payments accruing at different times of the year.

58927. Would it also lead to efficiency in the maintenance of the drainage?—It has nothing whatever to say to the maintenance. It is merely the Board of Works' charge, and I say that could be redeemed out of the purchase money. Advance a little more than the purchase money to redeem it, and the tenant would get the benefit of the work. It does not affect the landlord, and he would not object. I do not think he could.

58928. This refers only to repayment of the loan?—Yes. As to the maintenance rate I feel very considerable difficulty as to how that could be worked. It would be very much better if one body could collect the whole. I only mention that because it arose in Castlerea, and I think as I happen to hold the position of chairman of the Drainage Board that my views should be put forward. I must say that I think Mr. Fitzgibbon's and Mr. Hayden's demand a most reasonable one. In fact I think they might have gone much further.

58929. Would the matter be complicated by some of these people having purchased their land?—This would only apply to future purchases. It could be done by legislation for the past, because the Land Commission could be authorised to advance the money, but in any case where there has been a sale it could not be done except by legislation. Of course legislation could do it at once.

58930. Then as regards extension of the time, it would be a matter for the Treasury?—Yes; but what I would like to have would be that it should be made part of the annuity, so that it would save the trouble of making two sets of payment. Several of them complain of having three payments to make: first the annuity, then the Suck drainage rate, and finally the maintenance rate. They never know when they are coming on, and it means an awful amount of bother. At any rate two of the charges could quite easily be amalgamated. Take it away from the Board of Works, give it to the Land Commission, and add it to the purchase annuity. Two or three years ago, or a year ago, in the time of the late parish priest here, there was a great deal of correspondence with the authorities about a railway here, and I did my best to assist them in making them reasonable, but nothing has come from it, and from my knowledge of the locality I say a railway is very badly wanted here, not only for the coal—the Arigna coal may not be quite suitable for house purposes—but if this country is to be divided up a railway is almost essential to Strokestown. It is in the centre of the grass country, miles from everywhere.

58931. The CHAIRMAN.—Where do you suggest the railway should come from?—From the Sligo line. There were two or three schemes. I had some correspondence with Sir Antony MacDonnell and others about a year ago.

58932. Where does the Sligo line join—at Longford?—Not Longford, but Dromod, or Drumsna. There are three alternative schemes.

Oct. 3, 1907.

The O'Conor Don.

58933. There is a railway coming in at Dromod from the North?

58934. Mr. Bryce.—From Belturbet?—Yes.

58935. Chairman.—Where do you suggest it should go on to?—Well, the proposal was only to run it as far as this, but of course the natural and complete system would be to run it across to Roscommon and join the two lines. At any rate there ought to be one here. You have a very big district in the County of Roscommon completely unserved, and it would not be an enormously expensive line. Estimates and everything have been prepared for it. I mention it because it was mentioned this morning, and as I had some correspondence, and did my best to get the authorities to take up the matter. They were very nearly doing something, but it just fell through.

58936. Sir John Colomb.—You made several inquiries, with the result that the owners of about 12,000 acres of grass lands are willing to sell?—Yes.

58937. But you had other communications from other owners that they were not willing to sell. Am I to understand that the reason appeared to be generally that they were not willing to sell because they did not see the chance of getting their money?—I think, with the exception of answers applying to about 300 acres, that is the case.

58938. That is the reason?—There were 300 acres owned by smaller men who refused, but out of the total of about 12,000 acres there were only those 300 who refused, and they refused absolutely.

58939. Do the Commission absolutely understand this, that the owners who were unwilling to express their desire to sell based their objection on the ground that they could not see their way to getting their money?—Every single one. Of course a certain number of people did not reply, but every single one that replied, with the exception of owners of 300 acres, gave that as a reason.

58940. Mr. O'Kelly.—What was the reason?—That they could not get paid, and that they were not willing to leave the matter in an indefinite state.

58941. Could not be paid in time?—Yes.

58942. And I suppose if they did consent they would want to have the purchase price measured in years' purchase?—You were not in when I read this list out, with the information it contains, for the Commission, but, Mr. O'Kelly, I may say it is strictly confidential. They would only tell me this on the condition that I would not disclose their names except to the members of the Commission. You can quite understand the reason. Out of something like thirty or forty owners that I communicated with all expressed their willingness except the owners of 300 acres, roughly speaking, who simply said "No," and a few who said "There is no good going into this matter, because the Government admit that they have no money. There are thirty-four millions already pledged and there is no money; and I am not going to stop out of my money for an indefinite period."

58943. With the exception of these 300 acres, all the others were ready to sell if the money was forthcoming?—Yes, roundly. Of course a certain number did not answer at all. If you write to a large number of people you will find some do not answer.

58944. The owners of 12,000 acres were willing?—Everyone there has quoted his terms, and I have given you the valuation roughly, the area, and the price, as far as I could. Of course the figures are rough. Some of them in answering, although in writing I asked for the valuation, did not give it, so I had to get it from books. But in addition to that 12,000 acres—there may be a few hundreds that you may say ought to be struck out—I have got since I made that list out something like 1,000 acres which can replace those.

58945. I have not gone through this list, but I will ask this question: Having read it yourself carefully, would you think sale and purchase have been retarded by reason of the fact that the price asked for would be excessive?—No. My own impression is that terms could be arranged. There are one or two who ask high terms, but the large majority are quite reasonable. My own impression is that while some of the prices are rather excessive, probably if you came into communication with the owners you would get some reduction.

58946. Do these relate to the heavy land or to light soil?—I may say they all relate to land that has been specially selected by the Congested Districts Board as suitable, because I particularly communicated with owners of such lands. I went through part of the country here with Sir Antony MacDonnell and Mr. Doran, and they pointed out lands they would like to get, and I, as far as possible, communicated with the owners of these lands. I said, "I am quite sure you can get a very large quantity of this land. I have not had communication with the owners, but I will get into communication." And I did. Nearly the whole of it is land that has been stated by them to be suitable for their purposes. Of course on some of it there are tenants, mostly grazier tenants, and in most of the cases where there are grazier tenants I have made inquiries, and found that terms can be arranged.

58947. Did you go to any particular district of the county, or did you spread yourself pretty well over the whole county?—Hardly the whole way round. There is very little land marked in my list available between Athlone, Roscommon, and Strokestown, and that end of the county. It is mostly between this—Ballenagare, Castlerea, and Roscommon. I do not put that list in as by any means the total. It is only a start, and I say you can get that as a start. There will be one or two owners that may want high terms.

58947A. Do you suggest compulsion for them?—No, because where you want to carry out a scheme for any public purpose, and you can get land, and more land than you can possibly use, without compulsion, it would be quite a novel thing to say that because A does not want to sell, and B's land will do just as well, we will use compulsion to get A's. I say you can get sufficient land without it. I say you can get it all with the exception of one or two cases, and they are very small owners of only about 100 acres each. Only those men who live by the land do not want to give it up.

58947B. But as land is necessary, and there are always cases to be found where there are owners of land who will not give it up even where it is essential to a scheme, don't you think there is a case for compulsion?—Granting your premises, but I say that list proves pretty conclusively that your premises are wrong. Take those 100 acres that a shopkeeper, or somebody like that, has. It may be said that they are necessary; but where there are 12,000 acres available elsewhere there is no necessity for taking that 100 acres. You can have that 12,000 acres. Take all that, and then consider whether you should have compulsion; but until you have taken that you have no case.

58948. Your case is that if 12,000 acres are taken now you will be able to get the 40,000 acres afterwards, which you say is your original estimate?—I have not any doubt. It is very difficult for a private individual, and it took a great deal of trouble to get hold of that list.

58949. Chairman.—From your knowledge of previous transactions and previous prices for grass lands in this part of the world, should you say that the average price asked by these landowners is higher than the average price at which deals have already taken place?—I should say that these owners, taken as a whole, would accept the average price of two years ago.

58950. Do you think the price has come down within the last two years?—I think the Estates Commissioners and Congested Districts Board have been short of money and have not been anxious to buy except where they could buy very cheap. That is my impression from looking into the matter. There is no doubt there has been a shortage of money.

Mr. Thomas Brady examined.

Mr. Thomas Brady.

58951. Chairman.—What do you wish to tell the Commission?—What I want to tell the Commission is, that I represent the Cloonaquin division. Part of the property was sold ten years ago to the Land Commission, and the Congested Districts Board has the grazing portion of the land bought for the last three years. The tenants are all small holders with the exception of a few. There are forty of them between £4 and £6 valuation; seventy between £6 and £8, and about forty more between £9 and £13 valuation.

and then there are a few running up from £20 to higher valuations. I came here to claim on behalf of them an increase to our holdings, or an additional holding from the property we are living on. The Congested Districts Board has 500 or 600 acres of land bought, and the tenants belong to the same property.

58952. But you have already bought?—Yes.

58953. So you want to have an additional bit added to the land you have already bought?—Yes.

58954. In fact, I suppose you are sorry you bought?—Well, the holdings are so small that if we do not get an increase on the property it is hard to expect land on another property.

58955. Mr. Bryce.—You bought under the Ashbourne Act?—Yes.

58956. At what number of years' purchase?—Twenty years, and then there is no accommodation on the majority of the tenants' land to live on.

58957. Mr. Sutherland.—Have you applied to the Congested Districts Board?—Yes.

58958. What did they say?—They said they would consider the case.

58959. Chairman.—Anything else you want to say?—Nothing else.

Mr. Matthew Egan examined.

58960. Chairman.—Where do you live?—In Elphin.

58961. Are you a farmer?—I am connected with a farm. My mother holds a farm, but I am here in the interest of the working class.

58962. What exactly do you mean by the working class? Do you mean agricultural labourers?—Yes. My contention is that if the Estates Commissioners or the Congested Districts Board take over the grass lands to divide them these men should get a share in preference to the sons of tenants.

58963. You give some reasons for that, I suppose?—Yes. There would be less burden on the ratepayers; these men would be able to do more tillage and be able to sow more crops on the land, which would pay far better than under pasture as at present.

You think it would. Somehow or other your opinion is not borne out by others.

58965. Sir John Colomb.—What Rural District are you in?—Elphin.

58966. What Union does that belong to?—It belongs to the Union of Strokestown.

58967. There are thirty-three cottages built for labourers there. Have you ever applied for one?—No, sir.

58968. Have, what you call the working classes—that is the labouring class—have many of them applied for cottages?—A large number of them in my district have applied for cottages, but then there are a great number of obstacles or hindrances to these cottages.

58969. Is your complaint that you cannot get employment as a labourer?—Oh, no; not mine.

58970. You are a representative type of the working class?—Yes.

58971. What I want to know is this. Do you find in your own person that you have difficulty in finding labour?—I find that labourers have difficulty in getting employment, because it is impossible to find employment in the district. I think it would be much better if the sub-division of these grazing lands was brought about, that the *bona-fide* artisans and labourers would get the first consideration instead of the sons of large farmers.

58972. Have they tried with Mr. Neary?—Of course, there are a large number of labourers, and it would be impossible for all to find employment with one man.

58973. Whom do you call the *bona fide* labourer?—A man living in his father's house, who has a farm. I call him a *bona fide* labourer.

58974. I do not want to confine you at all, but I want to know, when you describe a class as *bona fide* labourers, do you mean sons living with their fathers, who have holdings?—No, I mean sons living with their fathers in the town. I am not taking the country.

58975. Is your claim made on behalf of the labourers in the towns?—My claim is made on behalf of the labourers in the towns.

58976. Mr. O'Kelly.—Has any improvement followed from the adoption of direct labour on the roads?—Yes. A little improvement has followed, because more *bona fide* labourers have found employment on the roads. Heretofore they were people who had been a burden on the rates. If the system of direct labour was more generally advocated the condition of deserving people would be vastly improved. Secondly, if the erection of labourers' cottages was proceeded with it would be a great advantage.

58977. What class of farmers, before the adoption of the direct labour system, used to be the contractors for the maintenance of the roads. Were they small farmers or medium farmers?—They were large farmers, the majority of them.

58978. Did the large farmers let or sub-let the contract?—No.

58979. Did they carry on the work themselves?—They carried on the work themselves. They might employ one or two workmen if they had no sons themselves.

58980. So that in some little way the employment of direct labour was an improvement amongst the class you represent?—Yes.

58981. What do you mean by saying that there are obstacles in the way of the erection of labourers' cottages?—Well, in certain places where they could be built they prefer to put down plantations.

58982. You do not plant a country in a week. What are the present obstacles?—Well, there is one obstacle that I find has been placed against them. Where a labourer applies for a cottage, and he holds an acre of land, he is opposed as being a farmer.

58983. A man in the country has already a house and an acre of land. You would wish to include him in the category of labourers as defined by the Acts. Does that man work for his livelihood amongst the local farmers?—Yes. If he only held an acre of land it could not be enough to maintain him.

58984. Don't you think it would be much better in the first instance, at any rate, that we should provide houses for the labourers who have no land?—Certainly.

58985. Haven't you got an Act of Parliament which embodies the principle of compulsion?—It does, but there are many obstacles brought up in the way of the working classes when they apply for cottages, as you are aware of.

58986. I was not aware of them?—You may not, but I am aware there are obstacles.

58987. Haven't you got your remedy. Suppose you see that a District Council deliberately and intentionally obstructs the carrying out of a scheme of labourers' cottages, don't you know that you can go elsewhere and see that the work will be done. I don't say that you should apply to the Local Government Board as against the local authority?—We might bring our case to the County Council and find that it would be obstructed there also.

Mr. Timothy O'Rourke examined.

58988. Chairman.—Where do you live?—Near Ineak. I am a member of the County Council of Roscommon, and I am speaking on behalf of my country district.

58989. You are not nominated by your County Council?—No, but by the Directory of the United Irish League in Dublin.

58990. There was a Mr. Shanaher who was nominated by the County Council, and he did not turn up?—I refused to act.

58991. Sir John Colomb.—Tell me, first of all, are you a farmer?—Yes.

58992. What is the size of your holding?—135 acres.

Oct. 3, 1907.

Mr. Timothy O'Rourke.

58994. Have you got any other business besides farming?—Yes.

58995. Is your farm tilled or grazed?—I both till and graze.

58996. Do you live upon the farm?—Yes.

58997. CHAIRMAN.—What evidence have you to give us?—Well, in the Clooneyquin electoral division there are a number of townlands not scheduled that require to be dealt with as congested, namely, Camogue, Clooneyquin, Corracreigh, Cloonenahane, Corrabane, Flaskagh, Foxborough, Killina, Loughtanna, Attabagh, and Tullentuppeen. In fact I would be in favour of having the whole union scheduled. There are a number of townlands where there are very small holdings. They have already bought out under the Ashbourne Act, and if these tenants do not get some of the land that has been purchased in this neighbourhood it will be impossible for them to get it otherwise, and in fact there will be a little trouble, I suspect. I will give you the number of small holdings. My impression is that there are ninety-four small holdings in Clooneyquin.

38998. Mr KAVANAGH.—Of what valuation?—Between £5 and £10 valuation. There are ninety-four tenants, holdings from four to six Irish acres each, very few of them having turf. They have to go a long distance for it. The Congested Districts Board have purchased 500 acres, called the French estate, within one English mile of these people, and on the same estate. If this land is not given to the tenants to enlarge their holdings there is no other for that purpose near them. The following are the farms purchased:—Tobberroory, Tullentuppeen, Corrabadgh, Knockmanoy, and Killinawane. If the Congested Districts Board purchase the farm of Foxboro' containing about 200 statute acres it will be sufficient to supply turf to tenants on all the townlands. This farm is now offered for sale

58999. CHAIRMAN.—Did you bring it under the attention of Mr. Doran?—Yes, I have written to Mr. Doran and have spoken to him also.

59000. Did you get an answer?—He sent two or three valuers there to value, and I have not heard yet what was the result. It is twelve months ago. My county district goes to Elphin. In Elphin and Rossmore electoral divisions a sufficient supply of good land can be had which is at present occupied by eleven months' men at a rent of from £2 10*s.* to £3 Caldermoran (landlord, Mr. Charles O'Connor), Mount Druig, Belanogore, Shankill, Elphin, and the Palace, held by Mr. Arthur O'Connor, who lives in London. I should say there are about 500 acres (Irish) in all, and this would supply a very large number of small tenants in both divisions. These are the only farms to be let in this locality at present. If these lands were purchased by the Board it certainly would be a great boon to the small tenants in the locality under the Board. If the Palace house and yard, with some of the land could be utilised for factories of some kind it would be a great benefit to the poor of the district. In Cregga Electoral Division in my district, too, there are a number of small tenants who require additional land for themselves and their families to live upon. The farm of Cregga, containing over 400 statute acres, belongs to Mrs. G. P. Mahon. The land is not what I call superior, but I think it would make good tillage land, and could be improved very much. It is farmed by Mr. R. Hague, but I do not know whether there is a tenancy in it or not. I think there are forty-three small tenants in this electoral division. Then Annaghmore East division is quite convenient to this town and is one of the poorest in the Union. I think the valuation of that division is £2,272. The population is 1,380. It certainly requires to be improved. The tenancies are very small; the holdings are all uneconomic; and the land would require to be drained and improved very much. In Rossmore Electoral Division there is a large quantity of land. In fact, the landlord has the largest number of untenanted farms in this county. He is a Mr. Murphy. There are a number of small tenants in that locality who require their holdings to be enlarged. I am entirely in favour of the Board buying up these places. The holdings are imperfect in drainage, require accommodation roads made to houses, and everything done, in fact, as on the Dillon Estate. I was there before the Board had anything to say to it, and I have since passed through it, and it is a credit to the Board what they have done there. I am entirely in favour of the Congested Districts Board continuing operations, as their officials are superior and painstaking, especially their Chief Inspector, Mr. Henry Doran, J.P., who is without exception the best official in all Ireland, as he understands his business thoroughly in every branch and is kind to the poor people. I would be entirely against amalgamation with the Estates Commissioners and the Agricultural Department if Mr. Henry Doran is not principal. I must say the Board has not got enough of money from the Government, and the increase Mr. Doran has asked for is not too much, and if supplied it will enable them to go on quicker than before. I may add that all the tenants in the Clooneyquin East division have purchased their holdings under the Ashbourne Act, nine years ago, at 20 years' purchase. They would have to pay 24½ years' purchase for same holding from what I can learn in the locality from other sales under the present Act. I do not think there is anything else I have to say.

59001. Sir JOHN COLOMB.—May I ask you one question with regard to your 135 acres. Presumably it pays you better in grass than in tillage?—Well, I could not do without having some of it in tillage.

59002. With your knowledge as a farmer, and evidently a gentleman who knows what he is talking about, do you think that your 135 acres would be more profitable in tillage than as you now use them?—Well, I do not think I could get labourers to till the full amount. I certainly think it would be profitable if it was tilled. I think all small tenants should till more. At present I am strongly in favour of it.

The Commission adjourned.

ONE HUNDRED AND THIRTEENTH PUBLIC SITTING.

FRIDAY, OCTOBER 4TH, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Courthouse, Boyle.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; JOHN ANNAN BRYCE, Esq., M.P.; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; and ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. JOHN KEAVENY examined.

Oct. 4, 1907.
Mr. John Keaveny.

59003. CHAIRMAN.—You are nominated by the County Council of Roscommon?—Yes.

59004. Tell the Commission what you wish to say? It is quite unnecessary to touch on statistics in view of the evidence of previous witnesses. All the available lands in the county have been already indicated to you, but with regard to Boyle No. 1 District, I may mention that according to the Blue Book of Mr. Finnell the figure given is 9,257 acres. That is not exactly accurate. There are some mountains included in that. There are five scheduled divisions in the 21 comprising Boyle No. 1 Rural District. The state of affairs in these is simply this—that the average valuation is about £3 11s. 8d. I think it would be necessary to have the other districts scheduled also. The one fact which prevents them from being scheduled is that they have within them ranches which raise the valuation above the limit. Yet we have extreme congestion in these divisions which are not scheduled as in any of the others. From my experience as a farmer living in a congested area it is impossible to relieve congestion in existing circumstances with the small patches of land that the people at present hold. If the people are not given more land and better land misery will exist, no matter what agitation we have or what laws are framed for the relief of congestion in the West. In the Arigna district there is very little land for the relief of congestion, and what I would suggest is that the Congested Districts Board or some authority would come to the relief of the poor people who have minerals there. We have it from experts of the first standing that there are most valuable minerals there, provided they are developed. At present there are a lot of men employed there, and a good deal of money is earned as a result of that employment, but it could be on a very much larger scale provided there was some assistance given to open up a small piece of railway through the Arigna valley to have a direct connection with the line already existing, which is within two and a half or three miles of where it is considered by experts that some of the richest minerals in Ireland exist. We have got nothing from the Congested Districts Board in any of these scheduled divisions. I certainly think the only way of getting relief in the extreme northern portion is by opening up the industries that are in the district. There is no other way available for the relief of congestion unless by migration—to take at least half the people who are there away from the district and send them away to the lands that are available for distribution.

59005. Roscommon is a good sheep country?—Not in that particular portion.

59006. Speaking generally?—Speaking generally, I believe it is.

59007. Is there any woollen factory in Roscommon at all?—There may be in the southern end, but not in this part. The roads are very bad in the congested districts which is a great drawback to the people. As far back as the memory of living man goes these places were unrepresented under the Grand Jury system, and this left the roads in such a bad state that it is impossible to take in or out the small amount of produce which the farmers are able to turn off their lands. The road which leads through the valley where I happen to live myself is not on an average more than six feet in width, and is so hilly that an empty cart is as much as you can take to some of the hills. Five hundred or six hundred farmers are living in these districts, and they have nothing from the Board to improve these roads. Of course we have made an effort since the new bodies came into operation, but long existing grievances cannot be eradicated in a very short time. Consequently the Congested Districts Board should come to our assistance in the way of doing something for the improvement of the roads. One of the greatest drawbacks at present is that we can get no lime in except on the backs of donkeys. Any effort made in the new bodies creates from the ratepayers' point of view, a certain amount of opposition. I would not have to go one hundred miles to get a man who was abused for trying to repair these roads. I got abused myself. It is a grievance requiring the attention of the Congested Districts Board. I don't see for one moment that you can expect any prosperity as long as the ranches remain as they are at present. There is no industry in Ireland so valuable, or that will continue to be so valuable, as the land, and I certainly think that the best thing which we could expect from this Commission is something in the way of developing that industry.

59008. You say in your precis that the whole system of fixing judicial rents is not fair in the tenants' interests?—Yes, I consider that the whole basis of fixing rents by the Land Commission is not just towards the tenant. I will quote a case in point in my own district, on the property on which I am a tenant myself—the Countess of Kingston's Estate. Some of the best lands in that district did not happen to be rackrented, and they fared as well under the Land Commission as the tenants whose rents were trebled in 1873. I believe the agent did it without the landlord's consent, and after he had put up the rents on a certain number of holdings the people rose up in rebellion, and the result was that after putting on two or three times the amount of rent which the tenants had been paying on some portions of the estate, he ceased, and the tenants were not rackrented on the other portion of the estate.

59009. Your chief objection is that the reductions given by the Sub-Commission are made to apply to lands no matter what the rent was before, and that 25 per cent. reduction might be fair on one estate or groups of lands, but that it would be unfair on another estate which had been more highly rented before?—My point is that the rents, back as far as the memory of any man can go, were at a certain figure. It happened that of two townlands one was rackrented and the other was not, and the rackrented land was the worse land. One acre of the non-rackrented land was worth three acres of the other; yet they fared just as well in court. There were ten tenants on that portion which was rackrented. Their total rent in 1873 was £44 14s. 2d. In 1873 it was raised to £93 9s. 8d. From the year 1873 until we were in a position to take advantage of the Land Act

Oct. 4, 1907.

Mr. John Keaveny.

of 1881 the tenants had paid in rackrent £390 4*s.*—that is the difference between the two rents multiplied by eight times. They entered court, and brought the £93 9*s.* 8*d.* down to £74 15*s.* 8*d.*, and I hold that the £44 14*s.* 2*d.* should be reduced by the average reduction given to all Ireland down to £35 15*s.* 4*d.*, for these fifteen years, the thing that did happen on the townland, that I will explain later on. I am giving the reduction that we got off the rackrent. I hold that we should get that reduction off the old rent, if it was not raised at all.

59010. That reduction was the first term rent?—Yes. If you calculate the difference between what they paid for the fifteen years and what they would have paid if there had been no rise you will see the amount extracted from them. The reduction on the second judicial rent brings us down to £55 7*s.* 2*d.*, the present rent that we are asked to buy the property out on. The terms of sale offered to us on that property now are 4*s.* in the £ on second judicial rents. I have the terms here in print from the landlord.

59011. So we have actually got this fact, that the rent to-day, after two judicial fixations by the Land Commission, is still £10 higher than it was when voluntarily fixed by the landlords in 1873?—Yes; and if we accept the terms offered by the landlord he gets his bonus added, and after he sells on these terms we have to pay for 68½ years exactly the same amount of money that we had to pay in the year 1873. The agent was J. Garnett Tatlow, who did this act on the tenants.

59012. What caused the sudden rise in 1873?—I can give no reason only greed for more money. The same thing will apply to landlords all over Ireland.

59013. Of course we have often heard of rent being raised in that way after an estate had changed hands?—There was no change of hands here.

59014. It seems a most remarkable rise where no sale took place?—These were the tactics pursued by the same agent on other properties as well as ours. What I have given here is not an exceptional case; it applies to hundreds of tenants, but I am not in a position to get particulars except of my own townland and the next townland, that did not happen to be rackrented. If we accept his terms now we bind ourselves to pay for the next 68½ years what we were paying in 1873. It seems they have extracted from the tenants since 1873 to the present day £1,247 18*s.* rackrent off that one miserable townland. There is half the land on that townland could not feed a cow on twenty or thirty acres. Anything that is there is the result of the energy of the tenants who are on it. It was absolutely worthless seventy years ago—to hear the tale of the old men who lived then.

59015. You say you are a farmer yourself?—Yes; I live on this townland.

59016. You have told us about the grass lands which should be acquired and broken up, and you gave us the acreage of that grass land. In your opinion would all that land be suitable for tillage when you have deducted the mountain?—I believe it would. The landlord himself gave a voluntary reduction in the next townland.

59017. Sir John Colomb.—On what date?—Not during the seven years the rackrent was paid. It is since the Land Act of 1881. The two tenants on the townland who did not take his offer of 3*s.* got 6*s.* 9*d.* of a reduction in their rent. They only entered court once. They are second term tenants, as they did not go in until after 1896. That goes to show that the tenants on the other townland would be entitled to a reduction if they were not rackrented at all. Consequently, if you work the whole thing out, there is a sum of £2,000 odd to be extracted from our townland if we buy at the price offered to us as compared with the neighbouring townland.

59018. Chairman.—You cannot give us the gross sum of the second townland?—I can.

59019. What was the total rent of the second townland in 1872?—£42 among eight tenants. He gave three shillings reduction to the tenants, with the exception of two, after 1881. One of these is Pat Doherty, and the other Mrs. Taaffe. Mrs. Taaffe's rent was reduced from £11 10*s.* 9*d.* to £7 17*s.* 6*d.*, and Doherty's was reduced from £5 9*s.* 3*d.* to £4 2*s.* 8*d.* They were the only two tenants who went into court.

59020. How much was the £42 reduced to altogether?—To £34 5*s.* 3*d.*

59021. That has remained?—Yes.

59022. They have not gone into court a second time?—No; certainly I think inspection is necessary where such exorbitant terms are asked. Perhaps you would like to see the terms offered. Here is a copy of the terms offered by the landlord within the last week (*produces document*). The amount of money extracted as a result of the rackrent before ever we buy would give forty years' purchase of what the amount would be if we were not rackrented. As we now stand they have 40 years' purchase of what our rents should now be according to the average reduction given to Ireland, namely £28 12*s.* 3*d.*, and we have forty times that now given in rackrent without buying at all; so if we were to have fair play the owner has got 20 years' purchase too much already without giving her any more. The facts I have given defy contradiction. He won't take less than twenty-seven years' purchase, twenty-four and the bonus.

59023. Have you ever known a sale carried through where consideration was given for the sums paid under a rack-renting system?—I have known no sale, but I certainly know that if those considerations are not taken into account there will be a most serious question for the State and the people in due time, if we undertake to pay for 68½ years the same rent that we paid in 1872. Why not base it on the principles derived from the knowledge of the last twenty-four years? Is there any reason to assume that we are going to be in a better position during the next twenty-five years? When you talk about the net income, how can you form an idea of what the net income will be in a case such as I have described? There is absolutely no sense in it.

59024. Mr. Sutherland.—Are you arguing against purchase or pointing out the difficulties that may arise?—I am pointing out the difficulties that arise. Where landlords have acted in the same fashion, it would be absolutely necessary to have the whole case gone into; and not only that, but there should be supervision of these lands by some responsible official, because the tendency all over Ireland, unfortunately, is for the tenants to jump at improvident bargains.

59025. Would not that be met by the proposal that is made to have inspection before purchase?—The land agent said distinctly he would have nothing to do with the Congested Districts Board or the Estates Commissioners—that the Estates Commissioners would wrong him.

59026. Assuming the landlord would have to do it?—Assuming that the tenants would be quite satisfied to buy.

59027. They don't hope to get back all the money?—They don't hope that; because if we got back all that is due to us in Ireland we would be one of the richest countries in the world.

59028. You are satisfied by a neutral official going down to inspect it?—Yes. Leaving all considerations of what we have paid aside, and bringing us back now to the rent we paid in 1873, and giving us the terms the landlord offered then, to show how far we are prepared to meet him, we will take the terms offered if he leaves us as we started in 1873, and leave him the thousands of pounds he has robbed the people of.

59029. As a matter of fact, you would be below what you were in 1873. If the rent of the first townland is £55 and the rent was £44 up to 1873, the reduction you would get on purchase would put you below £44?—If you work it out there won't be two shillings difference between it and 1873, and we would be bound to pay that for sixty-eight years.

59030. But you become purchasers instead of paying rent?—It is a great boon to us, but, all the same, we are tied up to carry it out. We think the smallest thing the landlord should do is reduce our rent to what it was in 1873. We got no value from the Land Acts. The tenants all over Ireland gained 8*s.* in the £. We would even dispense with that, and if he reduced our rent to what it was in 1873 we would take the terms he offers. That is as far as anyone can go on behalf of the tenants.

59031. Sir John Colomb.—Have you got any other business besides farming?—Nothing in particular. I had to leave the country to go earn some money for myself. I could not live off these mountains. There is no rent paid except what would be earned in England, Scotland America, or over the country.

59032. Your general complaint is, put shortly, that the tenants suffer in the fixation of rents by reason

there being no principle followed by the Land Commission?—That is the substance of it. Certainly, I think there was no due consideration paid.

59033. As regards no principle being followed, you are in agreement with the Estates Commissioners. You have given us the total amount of money which the landlord abstracted from the tenants during a certain period. Can you give me what would be the produce abstracted from the land by the tenants during the same period?—The value of the produce is always the result of the man's own labour. That varies. It is absolutely impossible for any man to give you a reply straight. What the farm of mountain land would turn out was all the result of the energy of the man. If he did not pay special attention to it it simply turned out no produce. He certainly did not take out what is able to make the rent or the man's calls. It was made in foreign countries and sent home.

Oct. 4, 1907.

Mr. John Keaveny.

59034. CHAIRMAN.—What is the name of these townlands?—Infarnagh and Greenaleevagh. They are in the north-east of the county.

Mr. JAMES SHARKEY examined.

Mr. James Sharkey.

59035. CHAIRMAN.—You represent the Boyle No. 1 Rural District Council?—Yes. The entire district is practically in an uneconomic state, as far as the holdings of the majority of the farmers are concerned. The suggestion I have to make with regard to relieving congestion in the district is, first, the acquisition of the entire untenanted lands in the district, and, I may say, in the county, and the migration of some of the people from small holdings to these lands, and the enlargement of the other holdings by adding to them the holdings thus vacated. That is the main remedy to be applied in the County Roscommon, where the redistribution of grass lands is so urgent.

59036. Where is the congested area you have in your mind?—I allude to practically the entire Boyle No. 1 District. There are a few divisions scheduled as congested. It runs up to the Union of Strokestown, and goes down to the northern part of the county as far as the mines of Arigna.

59037. On the Strokestown side is there any congestion?—Yes, as far as the Boyle No. 1 District goes, but not on the edge of it, where we have any amount of untenanted grass lands.

59038. Where is the grass land you would like to see acquired?—You have them in the immediate vicinity around the neighbourhood of Elphin, within a couple of miles of the end of Boyle No. 1 District.

59039. Do you think would the people in that district object to the people being moved on to the grass lands—would not the sons of tenants want that land for themselves?—I have no means of ascertaining the opinion of the people there, but if congestion is to be relieved it is not within the area of congestion you can do it. Where will you get land if you don't go a little outside.

59040. The people you would move have been used to having lots of peat. Do you think would they be able to get it if they move on to the grass lands?—Would they be near enough to the peat?—It is not probable in all cases that it would be so convenient as it might be, but by the operations of the Board you might acquire control of a reasonable amount of bog at a reasonable distance, and some public authority in the public interest might have the redistribution of that.

59041. Do you think that anybody otherwise likely to move would be deterred by the fact that there might be a difficulty about his fuel?—It is a question for serious consideration on his part, but if he felt on the whole he would be better he must be prepared to undergo some risk.

59042. We have been told that these grass lands were originally abandoned because of the difficulty of fuel and water?—That is a secondary reason for abandoning it. There was pressure put on them to abandon it.

59043. Do you think a man would be deterred from going to grass land by reason of the fact that he was not able to get peat?—That might be. In every project we have difficulties to encounter. Is the question of fuel sufficient to keep the people huddled together in poverty and destitution?

59044. How are you going to get over that?—While I admit there might be a little difficulty with regard to fuel, on the whole it would be possible to better their condition by migration.

59045. Sir JOHN COLOMB.—You mean to say that if a small tenant adjoining a bog with water and turf were asked to go to a better holding six miles from turf with water not on his holding, but perhaps a quarter of a mile off, he would be apt to go?—I think unless he felt convinced, taking all the circumstances into account, that he was going to better his conditions, that he would not voluntarily consent.

59046. Do you think that to improve his holding, without turf or water on his holding, would be an inducement to move?—If reasonable facilities could be offered in other respects, and if there could be a supply of turbary obtained within a few miles, I would not consider it out of the question.

59047. Sir JOHN COLOMB.—Suppose there is no turf within four or five miles?

CHAIRMAN.—It is really balancing the advantages. It is a question whether he would think that the better land would compensate him for the inconvenience with regard to fuel?—That might apply to any case, but I hold that the principle I mention is feasible, and that it is necessary for the relief of congestion to acquire the untenanted lands and have them distributed. There might be a few cases where the difficulty you allude to might arise, but I am giving evidence of general principles here, and would not like to confine myself to particular cases.

59049. In your view these are matters for the body carrying out the transfer, and as to which they must exercise all reasonable discretion?—Yes. I hold there can be no difficulty put forward with regard to isolated cases as to the want of turbary or the want of water that would be a justification for abandoning the idea of acquiring untenanted lands. In spite of these difficulties it would be a general improvement.

59050. Mr. KAVANAGH.—Are there any of these grass lands that are not fit for tillage?—I think not. On the whole it is very fertile land, and also good for tillage.

49051. We have had evidence that it is not so, and that a great part of the grass lands of Roscommon are not fit for tillage. Is that your opinion?—It is not. I hold there is no better land for tillage than the good rich fertile lands of Roscommon, particularly the first crops. You can raise better crops of potatoes, which is the staple crop of the farmers of the country.

59052. Can you say what percentage of the grass lands is not fit for tillage?—I could not.

59053. Is one quarter of it?—The entire amount of untenanted land, as far as my experience goes, is most productive fertile land for every crop.

59054. Why has it gone into grass?—Because it is in the hands of those whose interest seems to be to keep it in grass and feed bullocks and sheep on it.

59055. Was it at one time in cultivation?—I have it from tradition that it was.

59056. Can you tell me the reason why it has gone out of cultivation?—If you accept what is the general opinion, it was by landlord oppression and rackrents the small farmers were driven away and the land was turned into ranches, and fell into the hands of graziers for grazing purposes.

59057. If you got a forty-acre farm on these grass lands you would not be afraid of not succeeding?—Certainly I would have every hope I would succeed, but with a reasonable capital to start on.

59058. How much capital would you want on a forty-acre farm?—I would want to be in a position to stock at least half, keep another portion in meadow, and till a certain proportion. I could hardly give the figures in an instant.

59059. Mr. BRYCE.—How would you propose that the capital should be given?—I think the only reasonable way I could see would be by State intervention to get a loan to work those lands at cheap interest.

59060. You are aware that in a good many of the settlements that have been already made there does not seem to be much tendency on the part of migrants or persons who have got enlarged holdings to go in for tillage; they still keep it in grazing?—You might

Oct. 4, 1907.

Mr. James Sharkey

account for that, to a certain extent, by this, that in every enterprise, particularly at the first onset, difficulties are confronted, but the people, I believe, ultimately will find out the advantage of tillage.

59061. Do you think that the Congested Districts Board or the Estates Commissioners might make any conditions that there should be on a forty-acre farm a certain amount of tillage?—I think it reasonable to foster and encourage tillage as far as possible.

59062. How much would you say they would be entitled to demand in the way of tillage?—I could not lay down a definite rule. So much depends on circumstances.

59063. That is reasonable enough, but if in carrying out a policy you are going to disturb all existing arrangements for the sake of improvement, don't you think that there ought to be some guarantee that the improvement will take place?—Certainly.

59064. How do you propose that the guarantee should be given?—I think that after a time the farmer would find it to his advantage to have recourse to the most profitable system of farming.

59065. According to the history of those lands they were once under tillage, and they have not gone into grass, and therefore on that theory the most profitable way to handle them is to keep them in grass?—Tillage to a certain extent is most essential.

59066. According to our evidence, no matter how large the holdings, the usual amount of tillage in Roscommon is about two acres per holding. Whether the holding is 100 or 15 or 10 acres there are always two acres of tillage. There is no object in the Government incurring great expenditure for the purpose of having a large additional number of holdings with only two acres of tillage on each of them?—I quite agree with that, but the fact that the country is without tillage is the outcome of long continued misgovernment.

59067. Not misgovernment surely. It may be bad economics. Government has made no rules which produce this large amount of grass?—It has made laws and carried out a system that necessitated the emigration of the people. Labour became almost extinct, and it became almost impossible to carry out tillage, and people became so poor as to be unable to procure the necessary means of carrying out tillage except what they could do with their arms or the spade. There was not 5 per cent. of the community in a position to get the necessary implements. As far as the small farmers went they did all they possibly could with what they had, and that was the spade.

59068. Wherever you find bad land you find tillage; wherever you have good land you don't find tillage. That does not seem to agree with your argument that want of implements prevented tillage?—The tillage on the bad lands is due to the fact that the small farmers carry it on. Each cultivates his own garden, and the whole thing comes to something, though the amount for each household is small.

59069. That is quite true, but what I want to see is how you can insure that these people or their relations or whoever they are will practise tillage when they are put on the grass lands, and not carry them on as they are carried on now?—If they have carried on tillage on bad land in difficult circumstances why should you doubt that they will carry on tillage in better circumstances on better land.

59070. That is just exactly what is denied?—I hold there is no justification for denying it. I say distinctly where a farmer is there on a holding of land and he finds it is sufficient to recoup him by a reasonable amount of tillage he will go in for it. The small holder, if they did not do a certain amount of tillage and confined themselves to grazing, could not possibly maintain themselves. I have, therefore, no hesitation in saying that tillage will be carried out by the people after a certain time. A big revolution takes time to assert itself. If the people got encouragement they would abandon the idea of running to foreign countries, and settle at home, and begin to lay down their minds to tillage and other industries that might be started, and I don't believe it would be necessary to compel people to do what was most profitable if it is shown to be most profitable.

59071. Mr. O'Kelly.—How many acres have you yourself?—Forty-four statute acres.

59072. What kind of land?—Some fair arable land, and some coarse land.

59073. How many acres have you in tillage?—I have not more than two and a half acres. That is part of the disabilities we are suffering under. I have no one but myself, labour has become so dear. There is no labour in the country. One of the reasons is there is no labour to get. We are not able to afford to give such constant labour and remuneration to any man who is solely dependent on labour as to encourage him to stay in the country, with the result that when we small farmers want to get some help in the spring or autumn season we have not it to get. They have simply gone away to a country where there is constant labour; but if people stayed at home ultimately it would be to the advantage of farmers who want labour. The only possible labour they can get at present is where small farmers of ten or twelve acres have two or three young fellows growing up, and they might spare one of them, and send him to me occasionally; but where a man is solely dependent on labour we are not able to keep him constantly, and when we let him go in spring he cannot afford to wait until harvest again, when we want him again. If these men could get work outside the farm and be in a position to come to us at certain times——

59074. Mr. Bryce.—Could not you till more than two and a half acres yourself?—Not very well.

59075. You should want assistance to till more than two and a half?—Under the circumstances I cannot afford sufficient capital to buy that amount of farm utensils and machinery that would enable me to till. It is impossible for me to till it by spade labour, and I am not able to afford to buy ploughs and harrows and other implements.

59076. You have no grown up son? If you had any assistance from your family you could do more than two and a half acres?—Yes, but even with that assistance some machinery would be sufficient to carry out tillage in an extensive way.

59077. Sir John Colomb.—I understand you to give two general reasons for the decline of tillage: one is the fault of the Government and the other is, in your own experience, that the reason you don't till more is owing to the difficulty of labour and the want of capital?—Yes.

59078. When you attributed the decline of tillage to the fault of the Government were you referring to the fact of the Government allowing free foreign competition with home produce in the home market?—No. I was referring to the fact that the people had to emigrate, and that the fertile portions of the country became derelict, and the people who stayed at home were driven to the unfertile portions where tillage was unproductive.

59079. Mr. Kavanagh.—Would your argument be that the new holdings should not be too big?—No. I have not directly made that remark.

59080. I thought you said that a man without capital could work a small farm, but that if he got a large farm and had no capital he would merely keep it in grass as at present?—I think that a reasonably-sized farm would be necessary to see that a man could live and pay all his calls and have a substantial margin to maintain him.

59081. What would you say would be the size of that farm?—I think twenty acres would be a fair size.

59082. Mr. O'Kelly.—Irish acres?—Irish acres we generally calculate. There is another point with regard to congestion and its relief that I would like to put before the Commission, which is only secondary in importance to the point I have just dealt with—that is with regard to certain holdings, the great majority in this district just now, though I would not schedule them, yet the proceeds of these holdings are not sufficient to maintain a family. Take a holding of ten or twelve acres of inferior bad land. I don't want to go into the question of rent and taxes. Apart from that, the total proceeds under the present system of farming are not sufficient to maintain a family. If there is to be anything like a state of prosperity in respect to those districts this class of people require special and immediate attention. The first essential point on which to lay the foundation of an improved system of farming is a system of drainage. The labour and manure of people on lands not sufficiently drained go for nothing. There should be encouragement to drain and a better system of farming among this class altogether. Taking the straitened circumstances of these people into [illegible]

course it would be impossible to think that they uld afford to carry out any reasonable system to lieve their drainage, and I think it would be rea- nable to put before the Commission that a Govern- ent or some other body vested with the work of look- ig after these drains should go into these matters nd see that all the main rivers or main outlets be one at the expense of some Imperial source, and at tenants in those districts should get a reasonable mount at cheap interest to encourage them to drain nd improve their land, and in that way the produce ould be greatly increased and improved. Then the eneral system of farming wants to be looked after.

59083. Sir JOHN COLOMB.—Suppose that the whole the untenanted land of Roscommon was bought up nd divided up into twenty or thirty acre farms, you ve the Commission to understand that want of apital and the difficulties of labour would prevent ny great increase in tillage?—I would not put the ailure of any man in farming under the head of illage if you start him without capital on a holding land.

59084. Suppose that the whole of the untenanted nd of Roscommon were bought up, striped, and ivided up into twenty or thirty-acre holdings, do you ink would the Government have to find the capital nd provide the labour in order to turn Roscommon nto a tillage country?—I think that a person start- ng on a new holding should get capital in some shape, it is impossible to get on. I think it only reason- ble to expect that in most cases the Government ould go some way to provide this capital.

59085. What is to be done about the labour? How the labour to be provided for the whole of Roscom- on to keep it in tillage?—Because if encouragement ere given the people now emigrating would stay at ome, and there would be people to be got to labour.

59086. Suppose it did not stop emigration, then the heme would fail?—It might not revolutionise the hole system at once, but I hold that it would radually effect a stoppage.

59087. Might not it be the case that to stop emigra- on the wages must rise in order to keep the young en at home? If they find they can make a better ving in other countries won't they go there?—If you ad the country more generally dotted with small rmers themselves, their grown up families after time would afford more labour, and if they found ey could live in comparative comfort on their own oldings they would not have the same tendency to un away as at present.

59088. Suppose you have the whole country dotted ver with farms and young men growing up, do you hink the young men will be content to stay at a low ate of wages when by going to a new country they an be better off and get much higher wages?—Yes. What I hold is if the country were settled in that ay there would be a great many industries after- wards started in the country, which, with the farming industry, would induce the people to stay at home.

Oct. 4 1907.

Mr. James Sharkey.

59089. Then you must have industries as well?—If the farming developed in a reasonable way and con- tentment and prosperity were prevalent probably in- dustries would follow afterwards.

59090. The industries would naturally give better wages than agriculture, and take away the labour from agriculture and industries?—It would depend on the markets and the supply of people. I have heard of Governments in other countries that fos- tered farming to such an extent that they started industries to keep the people employed when they were not required at farming, and stopped these works in the seasons when they were required for agriculture.

59091. Mr. SUTHERLAND.—What countries do you refer to?—Buenos Ayres. In these places the Go- vernment industries are closed during the harvest sea- son.

59092. Mr. BRYCE.—If there was employment for the agricultural population in the country and a great additional population in the country the towns would benefit also?—Decidedly.

59093. So that these towns in many districts which you now see grass-grown would begin to look up and have a prosperous and increasing population? —Yes.

59094. That might furnish you with the supplies of labour to some extent which you require?—Un- doubtedly so.

59095. Sir JOHN COLOMB.—You are aware that the difficulty in all countries, even in Australia and Canada, where land can be given away for nothing, is to keep the population on the land and prevent them from drifting into the towns?—No. I can only speak from common sense. In any project in which a man finds himself prosperous and successful I don't see how it would require much pressure to keep him in it.

59096. CHAIRMAN.—Is there anything else you wish to say?—In regard to the improvement in the con- dition of small farmers, I would draw particular at- tention to the necessity of a change in their system of farming, and also to the necessity of a system of drainage, the want of which causes serious loss, as they lose their calves, which take a disease that is at- tributed to some pernicious herbs that they take off the wet land; so it is most essential to look after that and to encourage the small farmers to improve their system of tillage. The Board of Agriculture are doing something in that way, but they are not suc- ceeding in reaching the root of the thing. Another drawback in this district is the want of roads. The District Council at present is very much handicapped with this problem, as owing to the heavy taxes which the ratepayers at present have to bear they cannot face any greatly increased expenditure.

Mr. JOHN J. DOYLE examined.

59097. CHAIRMAN.—You are nominated by the Car- ick-on-Shannon Rural District Council?—Yes.

59098. I hardly think you need go deeply into the rst head of your evidence—the necessity of dividing he grazing lands. We have heard about that from he two previous witnesses, and also about it in Car- ick?—I want to bring under your notice the neces- ity for having a connection between Toomagh, north nd south, to have a bridge across the Shannon. There are up to 200 families there with no facilities or bringing their produce to market except they ome within three miles of this town of Boyle.

59099. Where do you propose that the bridge should e?—At Hartley. I am under the impression that hese two districts are already scheduled. We have 143 under £4 in valuation in the Carrick-on-Shannon No. 2 Rural District; we have 701 under £12, 306 nder £40, and 63 under £100, and 19 under £200, four under £400 and four over £400.

59100. Mr. SUTHERLAND.—What particular dis- tricts are you referring to?—Ten divisions of Carrick- on-Shannon district that are in the County Roscom- mon.

59101. CHAIRMAN.—We have heard about the bridge already in Carrick?—There are about 3,000 acres of land held by one man in the district on which it would be well to have a number of young men who now have to go away to America, England, and Scot- land. Congestion does not mean so much where a lot of people live together, but where a man has five or six sons, even if he has thirty acres of land, every one of them must clear away except the one man who will occupy it.

Mr. John J Doyle.

59102. You want to give the land to these men?— Yes. We want to have the men who have to go away put on the land, even where congestion does not exist at all.

59103. If you put your sons on Mr. Sharkey's friends will have to be put on?—I don't agree with Mr. Sharkey's evidence at all. Give me twenty acres of land to-morrow and I could live on it, even if I never got a farthing.

59104. Mr. KAVANAGH.—Without capital at all?— Certainly.

59105. CHAIRMAN.—Don't you think that the people who have very small uneconomic holdings have a prior claim on the land as compared with men who have no holdings at all?—No. I think the men with no holdings should get holdings.

59106. In twenty years time the same thing will arise. In twenty years time the young men of that time will have no land, and will have to go away?— That is a question for themselves. Give me twenty acres of land to-morrow and I will live on it.

Oct. 4, 1907.

Mr. John J. Doyle.

59107. Mr. KAVANAGH.—Have you no holding at present?—I have.

59108. What is the size of it?—Sixty-nine statute acres.

59109. Sir JOHN COLOMB.—How much do you till? Six acres.

59110. Does it occur to you, when you advocate the State finding farms for the young men in order to stop them clearing away, that if a shopkeeper, doctor, solicitor, or any other man as well as a farmer, has a strong family, he cannot make them all the same business as himself? Is it not the case, in all classes and ranks of society, where a man has a big family, the young men have to go? Has that ever struck you?—It never has struck me in any way only this: give me twenty acres of land to-morrow and I will live on it, and every young man in Roscommon will be well able to live on it if he gets it.

59111. Mr. BRYCE.—He does not want any capital?—Not one penny of capital. He is well able to work on it. If he is not able to carry on on twenty acres of land he won't carry on on 1,000.

59112. How is he to get the stock and farm implements?—The farm implements do not amount to much—a spade and shovel, and you then can live on it.

59113. No plough?—What requirement is there for a plough on twenty acres of land?

59114. You would do better with a plough?—I don't think so. You are twice as healthy if you take the loy and shovel.

59115. Sir JOHN COLOMB.—Does tillage pay better than grass?—Certainly it does.

59116. Could you tell me, as you don't want capital and labour does not seem to count, why you only till six acres out of 69?—How could we have tillage when we were hunted off the place?

59117. You have got yourself 69 acres of land?—Yes.

59118. You tell me tillage pays better than grass and you don't want capital for tillage, and I want to know why you don't do the thing which pays better and requires no capital?—How many acres of arable land have I? Is not it all a bog?

57119. That is quite an answer, if you till every acre of land on your holding that is capable of tillage. Do you do so?—By rotation.

59120. The Commission is to understand that you have only got six acres of land out of sixty-nine that are capable of tillage?—Yes.

59121. And that you till every portion of that?—By rotation.

Mr. EDWARD F. BOWEN examined.

Mr. Edward F. Bowen.

59122. CHAIRMAN.—Kindly state what you wish to bring before the Commission?—I wish first to refer to observations on migration at pages 22, 23, of the Report of the Congested Districts Board for the year ended 31st of March, 1905, with reference to the inability of the Board to divide the land which they buy in a district locally.

59123. Your point is this; in order to meet the requirements of a locality the Board should be able to deal with men over £5 valuation, not only on estates which they buy, but on neighbouring estates?—Certainly, because there are many districts in Roscommon where there are a large number of occupiers of land of £5 Poor Law valuation or less outside the Congested Districts Board estates.

59124. I suppose you hold it is essential in any migration scheme that these people should be relieved before any attempt is made to bring in people from outlying districts?—Certainly. For instance, there are, in my neighbourhood, between Ballinagare and Ballinameen, a very large number of occupiers who are in the habit of sending a few small beasts to neighbouring grazing farms every summer. Very often they get conacre hay there also. If these grass farms are all bought by the Congested Districts Board, and planted with migrants, there seems to be a very real danger that the small local farmer will be deprived for all time of a substantial part of his way of living. I would suggest that, before buying grass lands for purposes of migration, the Board ought to satisfy themselves as to how much land is required locally by this class, and reserve for them a sufficient quantity. It seems to me a very serious thing to say that you will jeopardise the well-being of these people in order to benefit the people from a distance.

59125. I don't think there is any doubt about it. I think the Commission felt very strongly that that amendment is necessary; but, of course, that does not get over the subsequent difficulty of what you are to do with the balance?—Quite so. My object is to draw the attention of the Commission to the very grave danger that they may be depriving one party of something they now enjoy for the benefit of another party living under similar conditions, in fact, robbing Peter to pay Paul. In such districts grass farms held by the central authority for the use of those small holders, could be administered at a small cost, and would be a great boon to them; but if such an experiment did not succeed, these farms could be divided hereafter. But I hold strongly that where you buy grass lands for the purpose of migration, you ought to find out how much land is required by the same class of people in the district where you buy the land.

59126. Mr. KAVANAGH.—You mean that otherwise we might be taking away the possibility of grazing of the people round about?—Yes. An enormous number of these people, who have only two or three beasts, send them every year to the grass farms, and have to pay a very considerable rent for them. My point is this. If you stripe up all those farms, where are those people to send their cattle to?

59127. Mr. O'KELLY.—Stripe up the farms among them?—You cannot do that.

59128. Do you mean as the law now stands?—Yes.

59129. They are not under £5?—Yes, and they are not under the auspices of the Congested Districts Board.

59130. CHAIRMAN.—You may have a lot of people whose valuation is over £5 and under £10, say about £7, who live on uneconomic holdings. Under the law as it now stands, the Board cannot relieve their congestion by giving them a bit of land?—There is a very large number of those.

59131. Those are the people who at present send their young cattle to graze on the grass lands?—I am under the impression that the occupier of a farm under £5 would be in the same position, unless he lived on an estate which had been bought by the Congested Districts Board, or was in a scheduled area.

59132. I think if he is under £5 he can be dealt with?—That is not the impression that is conveyed to me. At all events, whether he is just over or just under £5 won't make any difference in what is going to happen to him if you give the land to migrants.

59133. If you give him a slice of it?—You must not deprive this man of his way of living to benefit somebody else. For that reason, I would suggest the usefulness of a large central farm until you see your way.

59134. Mr. KAVANAGH.—Common grazing?—Yes. You can give it more cheaply than he can get it at present.

59135. Sir JOHN COLOMB.—Assuming the standard of economic holdings £10, and that the law allowed the Congested Districts Board to deal with all uneconomic holdings under £10, would you then say in a district in which that can be done that it would be necessary to have grazing land administered by a central authority, in order not to administer the small holders, although above £10?—Not, if you can give them the land; but my whole point is that you must not deprive these local small men of what they now have withiut giving them something to replace it.

59136. CHAIRMAN.—If you could raise all the local small men on the estate and neighbouring estates to £10, would that satisfy you?—No; it would not. I should like to make them over £10.

59137. If you made anybody under £10 into an economic holder that would satisfy you?—Yes.

59138. People over £10 can get along all right?—I don't say so. I don't draw any hard and fast line to what an economic holding is; but you must not make holders from a distance economic at the expense of uneconomic holders in a district.

59139. But there must be some limit?—I leave that to you, to suggest a limit.

59140. You would wipe away Section 75 of the Act

d not replace it by any higher limit?—I did not pose to go into that question. I merely say, in e case of the farms which you consider uneconomic, u must not sacrifice the inhabitants of any area in der to benefit the same class anywhere else.

59141. Mr. O'Kelly.—Has that been done so far this part of the country?—Not so far; but there great danger of it.

59142. Sir John Colomb.—You cannot take valua- n as a standard to determine actually what is nomic and what is uneconomic?—I don't think you n. I do not believe that the Roscommon grass farms ll ever be used to any extent for tillage, because y are more profitable in grass. I think the ten- ncy is to till less every year where the land will re- in in grass. For this reason, I hold that the Con- sted Districts Board, with respect to the division of ass lands into small farms, should base their licy on the assumption that the lands now in grass ll remain in grass after division. If the experi- nt of breaking up these old grass lands is tried, d the land has afterwards to be let back into grass, will probably take fifty years to bring it back to present condition. Further, if the large grass rms are done away with, the market for the small n's beasts disappears, and he cannot have them od enough for the Scotch or English trade, and now pends on the local graziers, and I believe that, if latter are done away with, the small Western asant will be ruined, and the re-payment of mil- ns of purchase money be placed in jeopardy. The ngested Districts Board have done an immense ount of useful work, particularly by way of drain- e, but they have, I understand, no power to compel e parties who benefit to maintain the work done. uch of the money spent will as a consequence be sted. For example, many of the drains recently ened on the De Freyne Estate had been made by rd De Freyne, at a cost of £6,000, but they quickly ame of little use, owing to neglect of maintenance, ich he had no power to enforce. I would suggest at the Board should have power to compel the par- s who benefit by them to maintain all the drains y make. In this connection, I would like to see e system of Parish Committees widely extended. I convinced that a very large amount of land can obtained by the Congested Districts Board with- t compulsion, provided a fair price is given. I nsider that net income, capitalized at 3½ per cent., uld in many cases be a fair basis. Owners strongly ject to sell where only the best bits of their land are plied for, and the inferior land left on their hands. plications for land on these lines have been made the Congested Districts Board, and I do not con- ler this fair or reasonable.

59143. Chairman.—You say you think the tendency recent years has been for more land to go into ass?—Yes.

59144. That may be accounted for by the shortage labour?—Of course, that would be one reason, no ubt; but I think the climate has a good deal to say it.

59145. Any way, you think there is something in argument which is so constantly put forward of shortage of labour?—That makes an immense fference. It is one of the great reasons.

59146. As regards your point, if the cattle trade as to suffer millions of purchase money might be aced in jeopardy; after all if there was a decrease profits of the cattle trade, there is nothing to pre- nt a readjusting by the State of the annuities. ppose a man undertakes to pay a certain annuity r sixty-eight years, and after he has paid ten or teen years, trade depreciates, and he finds a diffi- lty in continuing to pay on the same scale, there nothing to prevent the State lowering the annuity extending the term?—Nothing whatever. That ould be a help, of course.

59147. It would not follow that the State would se the money that it has advanced. It might mean at they would have to take a longer time to collect ?—That would be a substantial remedy.

59148. If a man had paid fifteen or twenty years the annuity, the reduction he would get by the re- ing of the annuity would be very great?—Yes; it it would not save him from being broke.

59149. That is on the argument that no rent affects e prosperity of a man; but it would be a way of lieving, substantially, the burden of payment to the State?—It would, but it would be a very serious step to be obliged to take.

59150. Mr. Sutherland.—We have a precedent already in the rent-fixing machinery?—Quite so; but you would have to make a very substantial reduction in order to meet the difficulty if the result of breaking up the grass farms and planting them with small men meant ruin to the cattle trade.

59151. Chairman.—You say you would like to see the Parish Committee used to do this necessary work of maintaining improvements?—Not merely those improvements only, but I believe the Parish Committees have done so much that I would like to see them extended further all over the districts, and I would like to see them furnished with some powers of enforcing the maintenance of drainage.

59152. If you invest them with powers of enforcing these things it would change them a great deal from what they are now?—It would add largely to their powers.

59153. It would give them an official character which might perhaps interfere with their work in other directions?—It might, possibly.

59154. Have you ever thought whether it might be made a condition in the vesting order that drainage and other things should be maintained?—I don't know how you could do that, because, how are you going to enforce that condition?

59155. In the same way that you enforce the payment of an annuity. It is obvious, if the State is going to expend a lot of money in making improvements on the land, and putting people on small holdings into an improved condition, it should have some claim to see that the improvements effected are maintained?—Certainly. I fully admit that.

59156. If, through bad husbandry or carelessness, these improvements are neglected, the State might be held to be justified in disturbing the fixity of tenure of that man?—It is very difficult to say how you should enforce the maintenance, but you certainly ought to have powers to enforce it.

59157. Simply by saying that unless these two conditions of good husbandry and maintenance are observed the man will be turned out of his holding; good husbandry should be regarded as essential as the payment of the annuity?—That would be one way, of course.

59158. And those conditions should be laid down in the vesting order; do you think that that would be a plan that would be very much resented?—I should think it would, and very difficult to carry out.

59159. What other means would you suggest?—I am rather inclined to treat it as if it were a case of an unlicensed dog—summon the person who neglects to maintain, and have him fined.

59160. Would you serve him with notice, calling on him to do it, and stating that if it were not done he would be summoned?—Yes; very much like a road nuisance or an unlicensed dog. There might be power to fine him at a certain rate, just as there is the power to fine a man for every day that his dog remains unlicensed.

59161. At any rate, whatever is done there seems to be an absolute necessity for continuing supervision by some inspector appointed by the authority that has effected the sale?—Yes.

59162. In the case of the Congested Districts Board it seems as if they would have to have an inspector continually going over the land to see that the improvements were maintained right up even to the end of the time for which annuities would be payable?—Drainage improvements should be inspected at least once a year.

59163. There are other improvements, fences, and things of that kind. Would not you suggest that the maintenance of fencing also is a matter of importance?—One man can compel his neighbour to keep his fence. There is a remedy already for that.

59164. Is there any necessity for making any condition with regard to cutting down trees; would you be inclined to leave that to the tenant?—I would leave that to the purchaser because it is a matter of opinion whether certain timber is advantageous or not. He might not agree with the inspector.

59165. Therefore you would leave it to the purchaser to cut them down or keep them up, as he likes?—Yes. I don't see what else you can do. If he wants to cut down he will cut down.

59166. You gave, as a reason for the change from tillage to grass, the scarcity of labour; that is one reason?—Yes.

Oct. 4, 1907.

Mr. Edward F. Bowen.

59167. Is there not another; that the crop produced by tillage, such as corn crops are met in the market by foreign produce, which lowers the price?—Certainly.

59168. And that the home producer has to pay rates and taxes and the foreign producer has not?—Yes.

59169. May you not take it that the lower the price of foreign produce the less the tendency will be to till?—Yes.

59170. With regard to the real grass lands, when you say that the grass lands of Roscommon will never be used for tillage, do you include all lands, or do you mean merely those lands that would be economically more valuable in grass?—I believe that all land which will remain in grass is more valuable in grass than when broken up; and I think that is the experience of almost all tillage farmers in tillage districts. I have done a good deal of tillage and I believe that in all tillage districts, which I know myself, wherever any land will remain in grass the occupier is most anxious to put it into, and keep it in grass rather than break it up.

59171. I have heard you have some practical knowledge of Wexford?—Yes.

59172. Comparing the good lands in Roscommon with the land in Wexford, generally, is not it the case that the land in Wexford will not remain permanently in grass?—Certainly.

59173. That is the cause of the necessity for constant breaking up?—Yes.

59174. That is the cause of Wexford being a tillage county?—Yes.

59175. And, again, the small farmers of the county have been tillage farmers from father to son for generations?—Yes.

59176. Therefore, you cannot press the argument that Wexford is a tillage county too far in support of the theory that the land in Roscommon should be broken up, owing to the difference in the nature of the soils?—Most distinctly; but now, since you have touched on that point, I was going to say that it is a very uncommon thing, even in Wexford, to see any land broken that will remain in grass.

59177. Where you have, in this tillage county of Wexford, land which, from its nature is capable of remaining constantly in grass, you do not find it broken up?—Certainly, and the same thing obtains in the tillage districts in the North of Ireland. Wherever you find land that will remain in grass permanently there it is in grass, and it is never touched.

59178. And wherever the nature of the land won't stand grass there you have tillage?—Yes.

59179. I take it you take a very serious view of breaking up grass land on account of the difficulty of getting it back again into grass if tillage did not succeed?—Yes, but then, on the other hand, I am quite convinced they will never be broken up to any extent.

59180. In reference to the question of maintenance of improvements by migrants, take the case of arterial drains. Do you think it quite possible to apply to arterial drains the same principle of law as applies to fences?—No.

59181. If there is a boundary fence, with one man on one side, and several men on the other, every one of those men has the right to compel the owner of the boundary fence to do his share of the maintenance?—That is so.

59182. Do you not see an analogy in the case of an arterial drain, where several owners are concerned in the maintenance?—There is, certainly.

59183. Would you not think, without going into the question of parish committee inspectors or anything else, that if that was made applicable to arterial drains, it would work smoothly?—No, I don't think it would.

59184. Why?—Because it would be the cause of constant bickering between neighbours; far more than fences. Fences must be kept up to prevent cattle from straying into each others fields, and so on.

59185. The Congested Districts Board makes an arterial drain that is necessary to enable the different holders to drain their land, and it is necessary for each holder that the arterial drain should be kept clear, and one man stopping his part will hamper the rest. Is there not there an analogy to the case of the boundary fence?—To a certain extent. I would not go with you all the way. I would rather not leave the neighbours to compel each other to maintain these arterial drains. I would rather have some other way of doing it.

59186. You would rather get some special authority with special laws with regard to drainage?—Certainly.

59187. Because you think if you applied to drains the principle that is now applied to fences, it would lead to considerably more difficulty?—I think it would lead to a great deal of fighting between the parties, and I think probably repairs would not be well done.

59188. You would be afraid that some people, rather than dispute with their neighbours, would let it slide?—To a certain extent. I don't think you would find it satisfactory.

59189. Mr. Bryce.—You are aware that in some parts of Ireland, where tenants acquire the holdings, they pull trees down ruthlessly?—Yes.

59190. Do you think some immediate step should be taken to stop this?—It is a great pity to see the trees cut down; but if you give a man a farm he has a right to do what he likes with it.

59191. Why should not the State make conditions?—If a man has got a tree growing where he does not want it, it is very hard to interfere with him.

59192. It could be provided that he could not do so without the consent of the authorities?—Yes; that would do very well. I am quite aware that there is a tremendous lot of damage done by the ruthless cutting down of trees.

59193. Sir John Colomb.—Are you aware that in cases in which land has passed from landlord to tenant, under the Land Purchase Act, trees are being cut down by the tenants?—Yes.

59194. It has been stated in evidence to us that in cases in which the landlords are going to sell, they have cut down the trees first?—I never heard of such a case. I don't say it has not happened. I don't know whether it has or not.

59195. You have no knowledge of the case of the landlord going to sell cutting down his trees first?—Such a case has never come under my notice.

59196. Mr. Kavanagh.—You say that the grass lands of Roscommon will never be broken up?—In my opinion.

59197. Would you say that the lands in grass are not deteriorating under the grazing system?—Some of them are; some of them are not. Some of them are very badly treated, meadowed too much. I am referring to grass land which has been divided among small tenants.

59198. They are deteriorating?—Some of them may be from bad treatment. All land will from bad treatment, but land will deteriorate much less in grass from bad treatment than it will in tillage from bad treatment. Tillage land can be ruined absolutely by bad treatment.

59199. Might we not look forward to the day when these lands will have to be tilled to save them from going into rushes?—No. Drainage is the only thing to get rid of rushes. Tillage will not get rid of rushes. When the land is put down again into grass, after a few years rushes will come back as badly as ever.

59200. It seems to be going back a good deal into rushes to my mind under the grazing system?—You cannot expect to till without draining, whatever you may do with grass.

59201. You say that the Congested Districts Board in cutting up farms, should do so on the assumption that they will remain in grass after division?—Yes.

59202. That will make a difference in the size of the farm?—Yes, and more particularly in the class of the people put into the farm.

59203. Suppose you were cutting up this grass land on the assumption that it will always remain in grass, what difference would it make in the size?—You would have to give more. But you would give it to a different class of people.

59204. If we split up grass lands on the assumption that they would be used for mixed farming, you could give smaller farms than you would on the assumption that they would always remain in grass?—Yes.

59205. About what difference?—I would say that the tillage farms might be twenty-five acres. I would like to see the grass farms from thirty to forty.

59206. Less than forty would be no use?—I won't say that. That is another matter.

59207. Could a man live on a thirty acre farm if

he kept it all in grass?—Plenty of people do, and on less; lots of them.

59208. Mr. SUTHERLAND.—What class of people have you in your mind?—Men who thoroughly understood cattle and so on.

59209. Do you know if there is any scientific knowledge required for grazing?—Very little.

59210. Sir JOHN COLOMB.—Whether a man succeed or not as a grazier really depends on whether he has a scientific knowledge of cattle?—I don't think the word scientific is applicable to the knowledge of cattle men. It is hardly scientific. It is thoroughly practical. If it were not thoroughly practical he would not succeed.

Mr. SUTHERLAND.—Quite so. It does not matter whether he is small or large.

59212. Sir JOHN COLOMB.—Do you think that, as affecting the general cattle trade of Ireland, it would be prejudicial to have a multitude of small graziers, instead of a few big graziers?—Yes, most distinctly.

59213. It would be detrimental?—It would be detrimental.

59214. If 100 acres of good grazing land is broken up into four farms of twenty-five acres each, will the four men who get them be able to carry on, in relation to the cattle trade of Ireland, the business as well as the one man?—Certainly not.

59215. A big man, dealing on a large scale, buys in blocks, and travels about to fairs and follows the markets?—Yes.

59216. Would that apply to the four men carrying on the cattle trade?—If you divide the farm into thirty acre farms. When in the hands of the grazier each of these farms carries fifteen beasts. Each new man will have three cows and will breed three calves, and buy three more. That would be six young beasts, extra beasts.

59217. CHAIRMAN.—We have had this over and over again?—I was going to point out you would have to provide a new market for over seventy new beasts for every 100 acres of land that you divide up.

59218. Your point is the difficulty of what they call succession?—You have got to provide a new market for a great number of beasts, because you are doing away with the market for some and you are finding others.

59219. You told Sir John you would not think the grass land of Roscommon would be broken up. In your opinion, there is no land in Roscommon at present under grass that would be good under tillage?—No. That is going a great deal farther than I did. I think there is a good deal of land in Roscommon under grass that would be better under tillage.

59220. So far as that land is concerned, would not you have a better state of things if you had that land in the hands of small holders of tillage?—Yes. I think it would be a great improvement.

59221. Therefore, really your point is comparative. When you say Roscommon ought to remain under grass, that only applies to the richest form of pasture?—The principal point which I wish to emphasise is the question of depriving the local people of the use of the land that they have been accustomed to.

59222. At any rate, you will admit that there is a certain amount of land in Roscommon now under grass which would be better tilled?—Yes.

59223. Also I take it as your view that so long as the present system of large tracts exists, and the shortage of labour exists, there is not much prospect of having the land tilled?—Quite so.

59224. Therefore, the only practical way to get it tilled is to make it into small holdings, giving it to people who will till it themselves?—Wherever you have got land suitable for tillage.

59225. Mr. O'KELLY.—You say it would be a mistake to have four men on 100 acres where one man was before?—Yes.

59226. Why?—What I wish to draw attention to is that, in my opinion, it would upset the cattle trade to a very great extent, and depreciate the price of the small man's young stock.

59227. But the prosperity of the cattle trade is not altogether an indication of the general prosperity of the country. You must not forget this fact, that where you had one man on 100 acres, you will have four men with their families, or twenty individuals, when that land is divided into four holdings of twenty-five acres each?—But if the land remains, as I believe it will remain, in grass, and if you have a serious decrease in the price of young stock, I don't see what good you are doing to these poor people.

59228. The land is there still?—You are going to add to the number of young cattle, and do away with the grazier.

59229. You are not doing away with the grazier at all. Let me suggest this. You are doing away with the middleman. You take the land from the grazier upon which he had his stores, and give it to the small man who will then take up the place that the grazier has filled?—He won't take his place at all. He will become another producer of young stock. You have done away with the purchaser in the grazier, and in his place you have put a producer. Therefore, you have almost doubled the supply and done away with the market.

59230. Why is it the small man must now sell his yearling to the local grazier. Is it not because he has not enough land to keep it himself for a longer period of time?—You are not going to create a man who is big enough to keep aged cattle.

59231. The breeder, that is the small farmer, sells his yearlings to the local grazier. He cannot keep them any longer, because he has not got sufficient land on which to keep them. He sells them to the local grazier, who afterwards disposes of them in the shape of stores to the Leinster man, or to the shipper; is not that so?—Yes.

59232. If you give to the small man the land which is now used by the grazier you eliminate the grazier and the middleman's profits, and bring the breeder into direct touch with the Leinster man, or the cross-Channel man?—You don't do anything of the sort. Your occupier of the thirty-acre farm is going to be a producer, and not a purchaser of the ten-acre man's produce. He will have no person to sell them to, and he cannot keep them until they are old enough.

59233. Why cannot he keep them?—The place is not big enough.

59234. The fact that he has an insufficiency of lands just now accounts for the fact that he must sell to the grazier?—Unless you give him the whole 100 acres.

59235. How many cattle will 100 acres carry now?—It depends on the land. We will say fifty.

59236. Say sixty. If you divide it into four holdings, between four small men, each of them will have fifteen cattle?—They will be quite a different class of cattle. They won't stock their land with one-and-a-half-year-olds. They will have cows and calves, and require to sell at one and a half year's old, and have nobody to buy them.

59237. Why could not they make stores of them as the grazier does now?—If he has got the cows he will breed the calves.

59238. You say that the grazier, as an economic factor, cannot be eliminated without loss to the small farmer?—Most distinctly.

59239. You differ from Mr. Doran, of the Congested Districts Board, who thinks the exact opposite, and who is a practical farmer and an expert in these matters, and one whose opinion should be entitled to some respect?—I don't wish to treat his opinion with any disrespect. I am giving you mine.

59240. I am just pointing out to you that the experts differ upon that?—I am quite certain that Mr. Doran never gave you evidence that the thirty-acre man would become the grazier of the young stock.

59241. Yes, because the breeder will keep them until they are sent direct to the Leinster men, or the shippers?—They cannot do that. It is impossible.

Mr. O'KELLY.—That is where the experts differ.

59242. Mr. KAVANAGH.—Were not most of these grass lands in cultivation at one time?—Not all, but a great many were.

59243. What did they do then?—I don't know.

Mr. EDWARD WHITE examined.

Oct. 4, 1907.

Mr. Edward White.

59244. CHAIRMAN.—You are a member of the Irish Game Protection Association?—Yes. I have been a member of the Committee since the Association started, sixteen years ago.

59245. Mr. SUTHERLAND.—What are its functions?—Its objects are to prevent the extermination of game in Ireland, and, if possible, to increase game.

59246. Is it in the interests of natural history?—It is a purely philanthropic association. Its members are composed of all classes.

59247. I wish to know whether it is in the interests of natural history, or for other purposes. Is it a society of gamekeepers?—It is a society with the object of preventing game from being exterminated. We look upon game as a valuable national asset.

59248. Is it your object to prevent game from being killed?—No; to protect it for legitimate sportsmen.

59249. Mr. O'KELLY.—I suppose it is an association of gentlemen to protect the game for themselves?—That would not be a proper supposition. I have been asked to give evidence on behalf of the Irish Game Protection Association. The Association has always recognised that individual tenant-purchasers, without a common arrangement, would not only find it difficult to protect the game on their holdings, but would also fail to know and appreciate the monetary advantages which lie within their reach, if they did so; and the efforts of the Association have been directed, since the Purchase Act came into force, to endeavor to bring this fact before the purchasing tenant. The evidence of the Rev. Father Kelly, of Innisboffin, in reference to the statement in the Fourteenth Report of the Congested Districts Board,* is unintentionally misleading on this point, as, at the interview referred to in the Report, it was not suggested by the representatives of the Game Protection Association that advantages could be derived by sporting rights being owned by tenant-purchasers, unless there was combination amongst purchasers for the protection of such rights. The object of the interview with the Board referred to was to impress that fact upon them, and the great importance of getting tenants to combine. That interview was one in succession to an interview held by representatives of the Association with the Estates Commissioners, which had exactly the same object in view. The Association was, and is, strongly of opinion that on the accomplishment of sales, whether through Estates Commissioners or Congested District Board, where it has been arranged that the tenants should have the sporting rights, steps should be taken to ensure combination amongst all the purchasing-tenants to protect the game from extermination. In one case, on a large estate, and one of the first purchased by the Congested Districts Board—that was the Dillon Estate—where combination was formed, three members of the Committee of this Association were glad to assist by renting the shooting from the Tenant's Committee at the sum of £50, but they found that owing to want of *complete* combination, whereby two or three of the tenant-purchasers, who had holdings in the centre of the estate refused to join the combination and allowed their lands to be poached, the value of the shooting was practically destroyed. The Association, at its own expense, has prepared and distributed and is distributing, copies of the Epitome of the Game Laws, and also pamphlets and leaflets, showing the value of game to the occupier of land.† It has also prepared a memorandum giving particulars of the benefits of united action, suitable for being disseminated amongst tenant-purchasers who had acquired their sporting rights for use by both the Estates Commissioners and the Congested Districts Board.‡ For this purpose also this Association had a form of deed drawn up by eminent counsel,§ copies of which were supplied to both sides. What use is being made of these forms by these bodies this Association has not ascertained. The Committee have received many applications from tenant-purchasers for guidance and advice, and in every case has given its assistance and encouragement. This Association is a purely philanthropic one; its members comprise all classes of the community, and its *only object* is to protect the game in *this* country, which has been, and is in such danger of extermination. Since its formation, in 1891, it has been doing the work of the Government, in prosecuting poachers and persons who shoot game without licences, and undoubtedly its efforts have prevented game in many districts from being exterminated. The increase of revenue derived by the Government from the additional licences and game certificates taken out, amounts to many thousands of pounds. Since the Association started, the total revenue amounted, approximately, to £300,000. In the last year the increase amounted to approximately £4,000 over the figures of 1891. In each district where an inspector is sent by the Association a noticeable increase in the number of game certificates taken out at once follows with the consequence of additional revenue to the Government. The enormous income paid for game and gun licences in Ireland goes into the English Exchequer (last year it amounted to £23,000), and, so far as the Committee of the Association has been able to ascertain, during its sixteen years' of work, practically no return whatever is made to this country therefor so far as the protection of game is concerned. It is notorious that the efforts of the Excise Officers in Ireland are applied to duties and objects other than enforcing the Excise Laws in regard to game. The police, who have of course, many opportunities of seeing poaching done and game being locally sold, are not encouraged in this country to carry out their duties in enforcing the law. The Committee have received a considerable number of letters from tenant-farmers and tenant-purchasers (many of whom are amongst our members) complaining of poaching being done on their lands, and their inability to prevent it, and there is no doubt but that apart from the question of game, the poaching done on lands, damage to fences, coverts, etc., by poachers, is a serious grievance. There are few countries in the world which lend themselves to the breeding of game and facilities for sport as Ireland, and it is deplorable that the country should lose such a splendid asset through the apathy of the Government.

59250. CHAIRMAN.—When you speak of additional licences and game certificates, do you mean licences to carry a gun?—Licences to carry a gun and to shoot game.

59251. These licences have nothing to do with game?—Unfortunately in this country it is used very generally to kill game, owing to the apathy of the inland revenue.

59252. There was a large increase last year?—Yes; owing to the efforts of our inspectors, whom we sent down. A great number of men who shoot game with a ten shillings licence take out a game licence to avoid being prosecuted.

59253. Would the abandonment of the Act prohibiting the carrying of arms explain the effect to which you refer?—It had no effect at all. The increase was the same before the Act was abandoned as it has been since.

59254. Sir JOHN COLOMB.—This £4,000 increase represents the figures up to the end of last financial year?—Yes.

59255. That is, up to the 31st of March this year?—Yes.

59256. The repeal of the Arms Act took place since?—Yes.

59257. Therefore, it could not possibly have affected the number of licences?—No.

59258. CHAIRMAN.—Then, the whole of the £4,000 increase last year applies before the passing of the Arms Act?—Yes.

59259. Mr. O'KELLY.—In consequence of its repeal you anticipate a large increase in the number of licences?—I don't think so.

59260. Don't you know that in many parts of the country licences were refused by resident magistrates, while now, all that one has to do is to go to the post office, and get a ten shillings licence?—Yes.

59261. CHAIRMAN.—You speak of the evidence of Father Kelly. I don't remember what that was?—He said we thought tenant-farmers were the best game preservers. What we said at the interview with Mr. Wyndham, who was then Chief Secretary, was that disaster would accrue if the tenant-purchasers were not pressed to preserve the game. We said they must combine; without combination it would be impossible, when the lands were cut up among small tenants, to hope for success. That has been proved by the Dillon Estate, which was thought to be such a suitable place to preserve, yet three men, in the centre of the estate, refused to join the combination

* See page 26. Q. 52606 *et seq.*
† See page 293.
‡ See page 298.
§ See page 297.

59262. It hardly helps us to say they must combine. How do you propose to get them to combine?—I think on the acquisition of land by the Board or the Estates Commissioners, whichever body purchases, steps should be taken by them before parting with the land to the tenant to insure that there will be combination of tenants for the protection of game. In regard to farms for which the Commissioners provide the money, we have again and again impressed on the Commissioners the advisability of getting their inspectors to show the tenants the economic advantage of saving the game from extinction. We have pointed out that the game is quite as valuable a national asset as the timber.

59263. Your recommendations only apply to estates sold through the Estates Commissioners or the Congested Districts Board?—Yes.

59264. You are not talking of direct sale?—No, because I took it you were not dealing with that.

59265. What you suggest is that where an estate is purchased by the Board or the Commissioners they should undertake the duty of forming some trusteeship?—Yes. For that purpose we prepared those deeds at their request by which the tenants or the persons acquiring the land can join together for the purpose of appointing trustees for the purpose of looking after the matter.

59266. What is to happen if they won't sign these?—Then the game goes. The impression appeared to be that we were preserving game for ourselves. Within the last ten years our subscriptions have exactly doubled, and with the change of land tenure and decline of landlords in this country it is pretty clear we don't get our subscriptions from landlords chiefly. We get them from everybody.

59267. What do you mean by the reference to the excise officers executing duties in regard to game?—I have been shooting for thirty years, and I have never seen an excise officer. It is quite an unusual thing for the ordinary shooting man to have ever seen an excise officer, the reason being that although the laws are the same in this country as in England, they are not enforced in this country. The excise officers apply themselves to other duties, distilleries, and one thing or another, which are more profitable and do not take the trouble of going out on the mountains.

59268. By excise officers do you mean police?—Certainly not.

59269. Under the present law, is it the duty of excise officers to concern themselves with poaching?—It is their duty to see that everybody who shoots game has the £3 game certificate in force for the time being; it is not the duty of the police to do that at all; but in England and Scotland the police are encouraged, and where a policeman sees a man in possession of game he tells the nearest excise officer that he saw so-and-so with game, and subsequently the excise officer prosecutes, and the policeman gives evidence. In Ireland, if a policeman sees anybody with game he does not say anything about it, because he gets no credit from his superiors for doing so.

59270. Mr. Sutherland.—Who encourages them in England?—Their superior officers. In Ireland he does not get any credit for sending in his report.

59271. Mr. O'Kelly.—Do you think it desirable that police should be employed in that work?—I thrashed that out with Mr. Gerald Balfour. He said it was impossible that they should do it. We pointed out that the police, under a former regulation, were directed not to enforce even the Wild Birds Protection Act.

59272. Considering it is no part of their duties, I think it is not desirable that they should do it?—We have never advocated it if we can get the increased excise officers. We are taxed £23,000 a year for the purpose of seeing that the excise officers protect the occupier of land from having his land poached, and we should get some return. £23,000 was paid last year for game and gun licences and there is no *quid pro quo* for that.

59273. Mr. Sutherland.—Don't you get the privilege of shooting?—The land is there. We expect to get some return.

59274. Chairman.—What is the *quid pro quo* you ask for?—The prevention of people who have no game licences from shooting. The majority of Irish farmers do not wish their places to be poached, but at present unauthorised persons come on their land, whether they like it or not, and shoot.

59275. What other body is there except the police to give this protection?—The Treasury, which get £23,000 a year, and make no return, should increase the number of excise officers, and should give instructions to the existing staff to bestir themselves about licence duties. That is what we have been complaining about for sixteen years. There are three classes of tenants in Ireland who are affected by the game question. First, there are the large purchasing tenants of Leinster, of whom there is a considerable number. They have recognised the fact that game is worth a good deal to them, and have joined our body in considerable numbers. The next class is made up of smaller people in the midlands, who are rather apathetic, who should be looked after to induce them to see that it is worth their while to preserve. The third class are the men who live in the west. These men find it to their advantage to preserve the game for the benefit of people who will take it and from whom they derive a large sum. They get well paid for looking after their own place. Neither the men in the west, nor the Leinster men like poachers. In the midlands they are apathetic. All three are neglected by the Government, who get £23,000 a year.

59276. Sir John Colomb.—I understand your object in coming here is in pursuance of the policy which led to the formation of your Association?—Yes.

59277. And in describing the objects, you recognise that game and fish are an element in the national prosperity?—Certainly.

59278. From that point of view, it is desirable that everything reasonable should be done to prevent their extinction, and to encourage their production and maintenance?—That is what we have been aiming at.

59279. May I ask if it is recognised by the Association that in order to carry out that policy you must have the support of the owners and occupiers of the land?—Certainly.

59280. Then I gather from your evidence that to effect this object you have got to encourage a general conception of the advantages to the nation of game and fish?—Yes.

59281. The £23,000 which you refer to, which is collected by the Excise officers in Ireland, goes away and does not come back?—That is so.

59282. Do you advocate that the revenue derived in this way in a given county, say Roscommon, should come back in relief of the rates of that county?—I don't know about the relief of rates, but for the purposes of the county.

59283. Come back to the community in Roscommon?—Certainly.

59284. That would tend to encourage a general appreciation of the value of game and fishing?—Certainly.

59285. And also encourage the desire of people that the highest revenue should be raised in the sense that people should not be allowed to commit breaches of the law by going without licences?—Yes.

59286. They should also recognise this, that when an estate passes into the hands of several, the tenants cannot derive the full benefit from the game if four or five people hold out and won't join?—Yes.

59287. What you desire is to bring about some system for the advantage of the tenants and of the community by producing a combination for the preservation of game; is not that the whole thing?—Yes. I may mention that some of our members have visited England and Wales, and inspected the systems adopted there by occupying tenants in possession of the game rights. Even in the island of Anglesea, which we all know to be about the most desolate part of the world, some tenants there got three shillings per acre. I have shot over one of these farms. The tenant said he got three shillings an acre for the sporting rights of his farm. This farmer has 100 acres, and at this rate he would get £15 a year for allowing a man to walk over his farm for ten days in the autumn. We publish cases of that sort, and send them out in thousands in all quarters, and we have offered them to the Estates Commissioners, and, I think, the Congested Districts Board, to disseminate, with a view to producing among purchasing tenants ideas of raising game for their own advantage.

59288. It ultimately means the advantage of the tenants?—Certainly.

59289. The combination has for its result the preservation of game, but the ultimate result is an advantage for the tenants themselves?—Yes.

Oct. 4, 1907.

Mr. Edward White.

59290. You spoke of deeds and forms you submitted to the Congested Districts Board, and the Estates Commissioners—will you kindly hand them to the secretary?—I have handed them in.

59291. You come here because the tenant farmers and others concerned in your association consider it is a matter to which the Commission should give attention in considering the nature of its report?—Yes; I think they should.

59292. As an important element in the national prosperity and welfare?—Yes. That is the reason.

59292A. Mr. Sutherland.—What is the occasion that arises at present for bringing this matter forward?—The ostensible reason was to correct the statement made by Father Kelly, I believe quite innocently; but I am bound to say we are very anxious to ventilate this question as often as we can, as we think it is a most valuable asset in the country, and most important that it should be preserved and developed.

59293. Was it affected, in your opinion, by the change now in progress, with regard to ownership of land?—No; I don't think so, beyond this, that we think that on the present occasion, when the lands are being transferred from landlord to tenant, and are being cut up, it is of vital importance to bring it forward before the new holders of land, and to show them the advantages of combining among themselves to protect the game for their own advantage.

59294. Nothing beyond that?—That is all.

59295. You have such a mistrust of the purchaser that you think he will not take any interest in preserving the game?—No; but we want to see that he understands his position, and to bring before him what he may do. It is no advantage to us beyond protecting the game.

59296. Protecting the game from extinction, and multiplying the amount of game are two different things?—Yes.

59297. If game has to be killed it matters very little by whom?—It matters nothing to the game.

59298. The game rights are being transferred to the new purchasers along with the land: I am looking at the return in your last report?—It says that out of 1,520 estates which have been sold the tenant-purchasers have acquired the game rights on 1,130.

59299. Does it not necessarily follow the transfer of land?—There is power in the Act to reserve them to the landlord by agreement with the tenants.

59300. How could the old proprietor utilise the game?—He can only effectively have the game rights with the good-will of the people. That was recognised at the time of the passing of the Act, that the landlord who reserved game rights on holdings occupied by other people could not have any adequate return from the game without the good-will of the people.

59301. You put forward the case that tenant-purchasers should utilise the game for their own interests?—Yes. The present occasion is one of particular importance for pressing that matter home. The new purchasers are getting game rights which they had not before, and we want them to understand their position now and not let the game be exterminated; and that to prevent this they should co-operate among themselves for the protection of game.

59302. Beyond calling for the excise officers, what other way do you propose they should co-operate?—They should do what was tried unsuccessfully on the Dillon Estate. On becoming entitled to the possession of the land they should sign such a deed as we have prepared and submitted to the Estates Commissioners and Congested Districts Board, and when the lands are let to any people such as some of our members the money can be divided between them. They can settle all that in the deed which is prepared.

59303. Is it found that the holdings individually are too small to farm out the shooting?—Yes.

59304. Had you any cases of landholders before who had holdings too small to farm the shooting?—No. This is a new condition of things.

59305. The new holders are smaller than anything you had before?—Yes, much.

Mr. Michael Cassidy examined.

Mr. Michael Cassidy.

59306. Chairman.—I think you are engaged fairly largely in the cattle trade?—Yes.

59307. Where do you live?—At Ballyshannon, in the County Donegal.

59308. What do you want to tell the Commission?—I have just made out a written statement here which I will read, and it will save time. I have been engaged in the cattle and fleshing trade for about thirty-seven years, and, in connection with such, I have travelled most of the cattle-rearing and and grazing and feeding districts of Ireland; also Scotland and England, and am familiar with the customs adopted in the different districts of all three countries. As regards the benefits to be obtained by the creation of small holdings in Ireland, I have given the matter a lot of thought, and have come to the conclusion that a far greater amount of wealth would be derived from the country by the creation of such as against the present system of ranches. Small holdings I would describe as from twenty to fifty acres of good to fair land, and all holdings of such size would require to be used different from how the large ranches are used, viz.: a good proportion in tillage for the growing of grain, roots, etc., to be used for fattening cattle. I consider one of the greatest losses Ireland suffers from in the raising of stock is the want of good winter feeding, and the Scotch and English agriculturist benefits by Ireland's loss. It is a common occurrence for small holders in Scotland and England to make a bullock or heifer at twenty months to twenty-four months old worth £20, and I have known cases of twenty months old cattle for commercial purposes, that is, for butchering, making £27 each. Mr. James Shiel, Longniddrie, Haddington, has made such a price of twenty months' old cattle for several years past. Of course, it is a matter of force feeding with roots and oil cake and other grain feeding for the last six months. In the congested districts of Mayo and Sligo cattle are kept to be four or five years old, and often sold as low as £6 to £8. Those cattle are fattened on the large ranches in Meath, Westmeath, County Dublin, and also on some of the best pastures in Roscommon, and large fattening farms all over Ireland. Those people who are rearing and, I may say, starving those cattle in the congested districts for four or five years and selling them at such unremunerative prices as I mentioned above could be learned, by growing winter feeding and getting cattle sheds on their holdings and improving the breeds, to grow cattle at two years old to be worth at least £18, by feeding them to beef and keeping up a regular supply of such beef all the year round, which could be done by the growing of a few acres of Italian grass. By manuring it, three or four cuttings of grass could be obtained from that every year, and the cattle could be infed all the time. In the hill parts of Scotland, say from Perth to Inverness, and further North, where the land is the worst, they raise the best grades of cattle, chiefly polled Angus breeds, and £20 is a common price for two-year-olds of the best class. I can quote a case where forty six-months-old weanling calves, twenty of them kept in Ireland till year-olds, out fed on hay, and as year-olds sent to Scotland, realised £9 10*s.* each. The other twenty were sent to Scotland as half-year-olds and fed by a farmer named Montrose, in Forfarshire, for six months on cut chaff, treacle, straw, turnips, and about two pounds of cotton cake. Both lots were sold at Brechin sale in Forfarshire in April as year-olds. The Irish-wintered twenty made £9 10*s.* each. The Scotch-wintered lot made £13 5*s.* each. I learned the cost of the Scotch-wintered lot per week was 2*s.* 3*d.* I don't know what the Irish-wintered lot cost, but I should think it would be very near as much, and the strange part of it was that, as a matter of live-weight for money, the Scotch-wintered lot cost less per cwt. than the others. There is a great loss sustained by cattle breeders in Ireland by the way they allow their cattle to deteriorate from November to May.

59309. Chairman.—How old?—These graziers in the West of Ireland leave the cattle out all the winter and give them hay. Weigh a bullock and find him ten cwt. in November and subject him to the ordinary process of out-wintering with hay when the weather is bad. Weigh him again the following May and

u will find him eight cwt., that is two cwt. of his st valuable quality lost (viz.: flesh), and it takes y, June, July, and August, to make that up again. Scotland the farmers never allow such a waste take place. They keep increasing the weight all e time and bring about maturity much earlier than Ireland. Of course, without shelter, sheds and ts and artificial food the Irish farmers could not what Scotch farmers do. When I speak of Scotch rmers I can vouch for the best. The results I have oted are from the small farmer on the worst lands. e big farmer does not breed cattle. He buys Irish efly for fattening. I also maintain that it is ing to the regular supply of Danish butter that put on the English and Scotch markets that it can mmand a better price than Irish butter, as provision lers told me they can only obtain Irish supplies a few months in the summer, and Danish is to be all the year round, because it is a tillage country, d they grow roots to provide winter feeding. irying and stock-rearing go hand in hand, and it on small holdings the best results of both dairying d stock-rearing can be produced, but any cattle red on such small holding should be fattened and reby make manure to feed the farm, and there uld be no reason for letting any but the producer ve any benefit out of the stock. And if such a rse were adopted, owing to the demand that exists beef of early maturity as against the old descrip- n at present producing in Ireland, Irish beef could made to put the American out of our best markets, t as the Scotch beef commands such a big price London over any other country's production, chiefly ing to its early maturity. By the division of the ge grazing farms into small agricultural farms land would give employment to more than twice at it is doing at present, with a result that shop- pers and all others would benefit, as population ans wealth to any country, and it would keep the ple at home at a healthy occupation who unfor- ately have, in most cases, to be satisfied with the rest employments in the large towns of Great itain.

59310. CHAIRMAN.—I think you have given your dence in a most interesting way. You say you live Donegal?—Yes.

59311. Do you know Connaught? Do you know the nditions of the trade in Connaught?—I do, in all land, my lord.

59312. Well, now, we have been told that if you re to break up the grass lands of Connaught the ple that would be put upon them would not graze, t they would breed cattle. What is your view about at?—I do not believe anything of the sort. They uld not do without breeding cattle on these lands, t they would improve it by breaking a certain rtion of it. I would not say they would break all it. They might break one-third of the farm in ne cases, when they would be educated to it, but y would require some little training in Connaught, Connaught has gone out of cultivation for the last ntury.

59313. The system you advocate is a system very ferent from that which is now carried on in Ire- nd?—Certainly.

59314. Therefore, in order to make the most of a tem of small holders, you would have to educate e people to the system that is practised in Scotland to the stall-feeding system?—Yes, the stall-feeding tem.

59315. Pending that—which must take time to nge the course of trade—do you think that there uld be any danger of the price of stock going down the elimination of the grazier, if the production stores was greatly increased?—Not at all, my lord, cause the small farmer would be educated to turn se cattle out at two, or two-and-a-half years old, ere the grazier lets them run about on the ranches til they are four or five years old.

59316. I quite understand your point, but the stion is—while you are teaching the people to that, what is to happen?—It would not take very g. my lord, to do that. In a few years the people uld be all into it, when they would find it would to their own benefit. But you must give them way first; you must give them the land first do it.

59317. Your plan involves a considerable amount of llage in order to grow the green food for winter ding?—Yes.

59318. Do you think there is anything in this contention that is put before us that a great deal of these grass lands in Connaught are not suitable for tillage?—I know Roscommon as well as any man reared in it, and there is some of the best tillage land in Connaught you would get in Ireland.

59319. Do you say most of the land would be suitable for tilling?—I would not say all, but the greater part of it is.

59320. Your system involves a certain amount of tillage and a certain amount of grass—a mixed system?—Yes, mixed farming.

59321. Would you advocate, for instance, in Roscommon that only the lands suitable for tillage should be broken up?—Yes, lands suitable for tillage.

59322. Very well, then. Does not that mean this, that when these holdings are being apportioned, care must be taken that a certain amount of the land is tillage land and a certain amount pasture land?—Yes. When they are being divided I should suggest that should be done.

59323. You would have to go that. You could not take forty acres haphazard, and put a man down on them without previous inquiry as to whether the land was suitable for tillage or not?—No.

59324. For instance, if you were a man looking for grass land for the purpose of a system such as you would advocate, it would not satisfy you that you could have fifty acres in the heart of Roscommon. You would want to know what sort of land that was. Wouldn't you?—Yes; but there are parts of the land of Roscommon here that would not suit for tillage. It is limestone rock land, but the best of grazing land.

59325. What would you do with it? Suppose you divide it up into twenty or thirty or forty acre farms?—Give a man portion of this land and some of the tillage land as well.

59326. Yes. But in order to do that you must have tillage contiguous to the good pasture land—lying alongside or convenient to the good pasture land?—You must.

59327. As a matter of fact, is that the case?—Yes; you would want to have it adjoining each other.

59328. Can you find that in Roscommon?—Yes, any amount. Take from here to Carrick-on-Shannon, and from that to Roscommon town and on to Elphin, there is any amount of it.

59329. My point is this. If you divide all this grass land into fifty-acre holdings, could you ensure that convenient to all the pasturage, which you yourself say ought not to be broken up, there should be tillage land as well?—Yes. I would advocate, on a man getting such a farm, that there should be some tillage along with it.

59330. But the question is whether it is possible to do it—whether it is possible to find the tillage land so situated that it can be added conveniently to the pasturage land?—Well, I believe there is plenty of it in Roscommon. I do not think there would be any difficulty.

59331. Is the pasture land and the tillage land intermixed—are they together?—Yes, you would get a portion of tillage, and then a piece of limestone rock land convenient to it, and then parts with good deep soil.

59332. You say you live in Donegal. Can the small holders of Donegal, living on the land which you usually find in Donegal—can they do what you suggest—can they in-feed cattle? Is the land good enough for that?—They do not adopt that system.

59333. Could they?—I believe they could.

59334. Would it be possible for them to do it?—They could do it.

59335. Take a man with thirty or forty acres, or fifty acres, partly mountain and partly tillage, such as you get now in parts of Donegal. In your opinion could he carry on his operations upon the Scotch system?—He certainly could.

59336. You think there would be enough tillage to supply him with green stuffs for the winter?—Certainly. I may mention there that they do not raise enough cattle in the West of Ireland. They get them from the congested districts of Donegal, Sligo, Leitrim, and some other Northern counties. There come hundreds of them every season to be sold in Mayo and Galway and parts of Roscommon.

59337. You think there is no reason why those people in the congested areas of Western Donegal should not be able to keep their cattle right up to

Oct. 4, 1907.

Mr. Michael Cassidy

the time they are fit for the butcher?—Certainly. The place I mention, between Perth and Inverness, is the wildest district you could travel through, and the people there feed the cattle the way I say. They give them cut grass in the summer, and they are able to turn their two or three cattle out fat, and they rear them from calves.

59338. I was just going to ask you about that. What sort of sized holdings are those between Perth and Inverness?—Well, some of them might have 100 acres of mountain, and bits of arable lands throughout, here and there. It is more or less right up through the glens from Perth to Inverness. It is all mountainous with little patches of broken land in the valleys and through the hills.

59339. What do you think is the capital involved in one of these holdings? How much do you think it has cost one of those people to put up the buildings?—Well, in some of the places there, you know it is the landlord erects the buildings.

59340. What does it cost the landlord? What is the cost?—Well, at least some of them, from £300 to £600 and £700, according to the size.

59341. Take a typical size. Say a man with 100 acres—half mountainy land, and a certain amount of pasturage and tillage mixed up with it. What should you say?—Well, between £300 and £400 worth of buildings.

59342. Therefore, in order to carry out this system successfully in Ireland, considerable loans or grants would have to be made to the small holders who seek to establish it?—Well, I suggest so. Give them a certain time to pay it back as a loan.

59343. If a man had fifty acres of land in Roscommon and wanted to carry on the cattle trade on the lines you advocate, how much capital do you think he would want?—Well, I would say that he would want £700 or £800 on a large farm.

59344. Fifty acres, I say. What would he want for that?—Well, I should say he could start in life very well on £500 or £600.

59345. I think you would certainly amaze the Lords of the Treasury if they heard you. Well, now with regard to the loss between November and May, I understood your point was that here there is not sufficient green feeding given to the cattle during the winter?—Yes.

59346. That they are kept out too much—that they are allowed to pick up what they can outside?—Yes.

59347. And that therefore they lose condition which it takes half the summer to recoup?—They lose the flesh, which is the most valuable part.

59348. Do you carry on this system in Donegal yourself. Do you in-feed much?—I live on a farm of about fifty or sixty acres.

59349. And do you do this?—I do a little at it, but not much. I am a good deal engaged in the shipping business, but I do about six or seven acres of green crops.

59350. You do not do much in the way of breeding cattle yourself?—I do not breed many.

59351. You buy them as stores?—Yes.

59352. And keep them and ship them off to Scotland?—Yes.

59353. Your land is really a location for the stores until you can ship them?—Yes.

59354. Sir JOHN COLOMB.—You think that Ireland would be far more prosperous if broken up into twenty-acre or fifty-acre holdings?—Yes.

59355. Do you foresee, if that was carried out, any difficulty with regard to labour?—I believe that a lot of the young people would stop at home if they got employment.

59356. I understand you distinctly to tell Lord Dudley that in order to give a man a fifty-acre holding he ought to have some hundred pounds capital?—Well, to get on well from the start. He might do with less. Many a man started with small capital and succeeded, but in order to get on it would be better to have £500 or £600 to erect houses and everything like that.

59357. Taking the illustration you gave of from Perth to Inverness, Lord Dudley asked you about the housing, and I won't ask you any more about that. But, on the hundred-acre holding and working on that system, what proportion of that hundred acres would be in tillage?—Well, I would say it depends on the quality of the land. I would say twenty or thirty acres. If a lot of the land was adapted for bringing forward cattle in good condition, I would not till so much. But, in order to have them in good condition during the winter months and keep flesh on them, you could not do it without having some tillage.

59358. You dwelt very strongly on the importance, and I agree with you entirely, of having a rotation of grass?—Yes.

59359. Isn't it the custom of this country that very little rotation of grass is used on the small holdings?—No, it is not used.

59360. And there is a tremendous loss on the small holdings because that is not done?—I do not think it is done in any place in Ireland that I know of, but it is done in Scotland.

59361. Where a man has broken up land, and wants to get it into grass again, what is the custom in Roscommon? Is it the same as in other parts of Ireland, where, instead of putting in grass-seed, they let nature sow it. Is that the case?—There is hardly anything tilled in Roscommon except the bogs and the bad land. You will see no good land tilled. I am going through it thirty-five or thirty-seven years, and I never saw any good land tilled in Roscommon.

59362. May I take it, with regard to the small holders not sowing rotation grass, that it is an indication of the want of knowledge of the simple feature of agriculture?—Yes.

59363. Now, I would like to ask you another question. In your experience—a very wide one evidently—do you think the yearlings that the small farmers are now compelled to sell are as forward and as good as they ought to be?—They are not.

59364. Therefore, if you are going to commence a process of improving knowledge of agriculture, would not the first thing be to teach the small farmer the importance of doing their yearlings well, and growing rotation grass?—Yes.

59365. Do you think a man who moves from a small holding in Roscommon and does not do that, and you plant him on a fifty-acre holding in Roscommon—do you think him likely to succeed when on his own small holding, he does not make the best of it?—He wants to be educated. I would suggest that there should be a model farm in each county subsidised by the Government to educate the present generation in that. A lot of people in Roscommon have never seen it at all.

59366. And is it not human nature that when people are accustomed to go on in a certain way it takes a very considerable time to alter their habits—Not so long, when they find it is to their own benefit.

59367. May I take it, or do you wish me not to take it, that, in order to make a success of a policy of acquiring grass lands and breaking them up in small portions, it must be in the nature of things a gradual process—a policy of taking small holdings from one district into another on to fifty-acre holdings. As you admit the small holders now have no agricultural knowledge, don't you also admit that progress should be gradual and slow?—I think such a policy should be carried out as speedily as possible within reasonable limits. Give the people the land and the chance of bettering themselves, and they will soon learn what to do.

59368. Do you consider—if you do I agree with you—that really the Irish butter is handicapped against the Danish butter by the absence of constancy of supply?—That is what some of the provision merchants in Scotland and England tell me, that the people get used to the Danish butter for the want of the supply of the other, and then they keep to it.

59369. And in order to have a better supply in the winter you must grow rotation grass?—Yes.

59370. And you must grow other things such as green crops?—Yes.

59371. And therefore, if the butter supply of Ireland is to be improved in this competition against Danish butter, is it not an extremely important thing that the small holders now existing should be better educated in the rudiments of agriculture as regards growing green crops and the rotation of grass?—Yes, and that could be met by local committees appointed in every rural district. Let each district form a committee of its own.

59372. Quite so. And therefore it is the first and very desirable that the new Department of Agriculture should promote the education of the small holders of Ireland?—Certainly.

59373. But is it not the case that until they are so educated by the efforts and the action of the Agricultural Department, which are excellent—

il they are so educated, to try a very big experi-
ht of shifting them on to good land, must be
iously done?—Of course, at the present time here
Roscommon the small farmers are all on the bad
d, and in a very short time they would get into
way of managing the better land, when they would
it would be to their own advantage.

quite agree, thank you.

9374. Mr. SUTHERLAND—I wish to ask you one
ion. You have heard of the evidence given before
here, as well as the evidence given in other places
ut land being too good for tillage. Do you agree in
view that the land in Roscommon, which is now under grass, is so because it is too good to be tilled?—I do not agree. Of course, there is some land better for tillage than others. But Roscommon is adapted for tillage on account of it being almost all limestone. Limestone land is always good for tillage, and the most part of Roscommon is limestone.

59375. So you do not agree?—I do not.

59376. With regard to the other questions and matters you have stated, you have been so well informed with reference to Scotland, which I also know so well, that I have no further questions to ask you. I appreciate your excellent knowledge?—Thanks for your good opinion.

Mr. DANIEL BEIRNE examined.

3377. CHAIRMAN.—Kindly state what you wish to
g before us?—I represent the Croghan Division in
Boyle No. 1 Rural District Council. I am
norary Secretary to the Boyle Town Tenants for
purchase of their town premises under the Land
of 1903. As Honorary Secretary I took a promi-
t part in establishing last year an agricultural
w in Boyle. I have been put forward by the
ghan Branch of the United Irish League to re-
sent their district before this Commission. The
ision which I represent might be taken as fairly
ical of the district which lies between Eastersnow
Elphin, and Carrick-on-Shannon and French-
k. The Croghan Division mostly coincides with
Croghan Estate of Mr. Lloyd. The following are
valuation statistics of the agricultural holdings
tenants—There are forty-one tenants holding under
valuation; forty-three between £5 and £10;
nty-five holding between £10 and £15; twenty-two
ding £15 and £25; eleven between £25 and £50;
e between £50 and £100, and six over £100.
re are 615 acres of non-residential grass lands on
King-Harman Estate, stretching by the boundary
my division, and these lands should be parcelled
among the smaller tenants on the Lloyd Estate.
se who get slices of the grazing lands should be put
ler obligation to till a goodly proportion of them.
lage and co-operation I hold to be the saving planks
the future Irish agriculturalists. A great respon-
lity rests with the Department to educate the
ple in the best methods of farm culture. I con-
r no serious effort has yet been attempted. Sub-
ntial premiums should be given to encourage more
l better tillage. Public money could be spent to
antage around Croghan in a scheme of main
inage. The establishment of agricultural banks
a need of the times. I remember a speech of the Chairman, when he was Lord Lieutenant, in which he said that the Government should invest public money in developing the resources of the country—not like gombeen usurers for the best return of interest on their particular purposes—but for National and Imperial advantages. The governors of the country should not only think—they should invest—"Imperially." That was a patriotic sentiment worthy of the speaker, and found a re-echo in my heart. The splitting up of the grass lands may be expected to get rid of a chronic evil and may give an impetus to agricultural activity if more tillage be insisted on, but without the hum of the factory and workshop we shall still lamentably lag behind countries less favoured by nature, but encouraged and protected by the fostering care of their paternal governments. Some connecting link of railway between Boyle and Roscommon town is much required. At present our district is practically disfranchised at the County Council and Technical Committee owing to the difficulty and expense of going to Roscommon. In the encouragement of industries the Department has been a great disappointment. Some few years ago the Rev. Canon Coyne, of Boyle, I, and some others, proposed the establishing of a co-operative bacon-curing factory in Boyle. I, as Honorary Secretary, made strong appeals to the Department for financial aid towards our organising efforts, but only to get a blank refusal. I really think if we are to be treated in the future in that way the establishment of pioneer industries will be an impossibility. But I expect more enlightened views from Mr. T. W. Russell. The Government is responsible for the Irish problem, and there is a large balance due to us for over-taxation, and a refund should be made for public works, developments, and industrial enterprises.

Mr. JOSEPH FEELY examined.

59378. CHAIRMAN.—Where do you reside?—Liscor.
nerely come to give some evidence about the Di-
ion I represent. It is a congested Division, and the
dlords claim twenty-seven years' purchase of second
m rents.

59379. Who are the landlords?—Mr. Bowen and Mr.
hite. We held a meeting of tenants on the 21st
August, and they came to the conclusion they
uld buy through either the Estates Commissioners
the Congested Districts Board, as they knew from
r Antony MacDonnell that if the Board bought it they could be relieved on the outside farms in the most convenient places, and could be scheduled as a congested division. We wrote to the agent, and he replied stating that the landlord had no intention of selling his estate either to the Estates Commissioners or the Congested Districts Board.

59380. You want either the Estates Commissioners or the Board to buy?—Yes, because the holdings are miserably small.

59381. You want them to buy because you think a lot of improvement is required on the estate?—Yes.

Mr. JOHN DRURY examined.

59382. CHAIRMAN.—Where do you live?—Two miles
om here. I represent the Poor Law Division of
annagh and the Boyle Division on the County
uncil. There is no use in repeating the statistics
out the congested districts; but there is one thing,
think, which does not get the attention it ought to
ceive, and that is the rating question and the man-
r in which rates on houses affect poor men on
all holdings in comparison with non-residential
ms with no houses. The principle is important
affecting poor people, and if legislation could be
troduced changing the principle that came in with
e Act of 1898 it would be a help to con-
sted districts to an appreciable extent. I will give an illustration to explain what I mean. In the townland of Tivannagh the valuation on house property or property described as "other hereditaments" is £27 10*s.*, and the valuation of land £76 15*s.*, making a total of £104 5*s.* The acreage of the townland is 256 statute acres. Contrast that with the farm of Keelogues, 140 acres, valuation £104 on land and 10*s.* on other hereditaments. In one case the tenants, nineteen in number, pay rates to the amount of £13 7*s.* 1½*d.* at the current rate in this county, and the non-residential occupier only pays on a similar valuation £11 6*s.* 8*d.*, leaving a balance against the poor tenants of £2 0*s.* 5½*d.* The difference is

Oct 4, 1907.

Mr John Drury.

due to the fact that the rate on houses is 3*s*. 8*d*., and on land is 2*s*. 2*d*. ; so that the greater the valuation of house property the greater the rate.

59383. There is no house on the grazing ranch?—Yes, the herd's house, valued at 10*s*., and the poor man has erected his house and offices at an expenditure of labour and capital, and he is taxed upon his own industry if he improves his house and offices to such an extent that they can be increased in valuation. He is naturally reluctant to do so if he brings a tax on himself.

59384. Mr. O'Kelly.—Do you think in a case of this kind the eleven months occupier should get the benefit of the agricultural grant?—I don't think he should, if it was a matter to be considered in that way. I think that the amount of rates these non-residential occupiers pay should be equivalent to the rate the poor tenant pays on house property, that would be at the current rate in Roscommon 3*s*. 8*d*. in the £, because they don't deserve the relief they get. It puts a premium on the existence of large farms. If these farms had to pay higher rates there would be a greater disposition to let them pass to the Estates Commissioners or the Congested Districts Board for the improvement of the congested districts. These are things that might naturally be considered by the Commission as being in the interests of the poor in the congested districts. There is another point in connection with the question of new tenants. Suppose untenanted land came into the hands of the Congested Districts Board or the Estates Commissioners in a selection of new tenants for this land it would be advisable to insure that they were bona-fide farmers, or at least people who derived their living mainly from agricultural pursuits, because it might be possible that people who would otherwise be ineligible for these farms might be inclined to make some jobbery, that is people might be returned as tenants of holdings who would get possession merely for the purpose of selling out in a couple of years time and securing a profit for themselves. This thing has happened on this property.

59385.—Chairman.—Tell us about that?—It is a case where a piece of untenanted land was divided, and one of the tenants who got possession of a new holding and was returned as tenant of it retired from it and disposed of his interest in it a couple of years afterwards.

59386. Whom did he dispose of it to?—By public auction to another tenant. In these cases the tenant farmer should get the preference when new tenancies are created in these holdings, instead of men who have the occupation of tradesmen or are living by other means.

59387. Was this other man a shopkeeper or tradesman?—I believe he was a retired school-teacher or something like that.

59388. Mr. O'Kelly.—Where was the land situate?—Just outside the township boundary.

59389. Sir John Colomb.—Would you be in favour of legislation which would prohibit the new tenant put by the State on land from selling his interest for a certain term of years?—Yes, except that if he expended capital for improvements at any time he ought to be compensated if he wished to relinquish his right or claim as a tenant, but it is not right that he should be able to dispose of his interest at the end of two years without it ever costing him a penny.

59390. Mr. Sutherland.—Was that holding purchased by a loan of public money?—It was Government money advanced to buy out the landlord's interest. It was divided by the Estates Commissioners' inspector.

59391. Then it was given to the man subject to an annuity?—Yes.

59392. Does not the selling authority maintain some control as long as the annuity is due?—Of course they do, but they seldom make objection to a tenant selling his interest, but it is hard to see a person who gets five or six acres of land, and then without it costing him a penny, he is able to dispose of his interest for £200.

59393. Do the Estates Commissioners not retain to themselves the power of saying who is to be the successor?—Of course they do.

The Commission adjourned.

APPENDIX I.

DOCUMENT put in by Mr. HENRY A. BURKE.

OUTLINES OF EVIDENCE.

desire to offer some evidence on the kelp industry, ch was formerly a staple industry on many parts the Irish coast. Its decline has been a very serious ter. At one time I believe that good kelp fetched) or £12 a ton, and even when other ways of aining iodine were discovered it was worth about per ton.

t is an industry which could be so worked as to vide means of employment for the various mem- s of a family. It is, therefore, of importance to whether it could not be re-started, even under sting conditions, so as to produce a price which uld pay for the labour expended on its manufac- e. It is noteworthy that the industry is not dead. withstanding the competition of other articles, p is still made and sold at various places along coast. It, therefore, seems well worth trying ether, by a little assistance from the Government, educating the workers into adopting better thods, and, above all, by inducing them to abstain m processes which injure the market value of the icle (such as allowing it to get mixed with sand or vel), the industry might not again become a widely- tended and paying one.

The trade exists in two forms—(1) The sale of anufactured kelp, and (2) the sale of the best de- iption of the weed (known as "Coughlagh") in a ied condition. There is no difficulty in collecting is particular description of the weed, for it grows itself in distinct patches. It is desirable, how- er, and even necessary, that it should be dried pidly, and good help might be given to the people providing large drying sheds of a simple and in- pensive type.

I believe that this kelp-making industry, coupled th fishing, was the original cause of the large pulation in many congested districts along the ast.

I once managed a kelp agency myself for four years, ving had a good deal of experience for several years ior to that date, so that I have had every oppor- nity of studying the process of production.

My district extended along the coast from the outh of the Killery Bay to High Island and the ands of Boffin, Shark, and Innishturk. £6 10*s.* £7 per ton is the highest price I remember; it opped to about £4 or £4 10*s.* when iodine was dis- vered in mines somewhere in South America (I ink). In addition to the dropping in the price, season for making kelp was shortened to a couple months in the year, from about the end of April the end of June. (I remember when it was pur- ased up till October, or as long as the weed could dried sufficiently for burning.)

For the last twenty-five or thirty years the business s been dwindling; the short season in addition to w prices, did not allow of the people making enough lp to make it pay.

For over forty years the kelp made all over Ire- nd has been, I may say, purchased by one firm in otland. I remember when other firms started, but ey did not last long, being put out of the market the old-standing firm. Like other products, there a good and bad kelp. When competition set in lp makers increased the adulteration, and what the firm would not purchase, except at a very low re (some at no price), was sold to the new com- anies. Many a bad load has gone to them from the ast I managed, which I found after testing was not orth more than a certain price, or perhaps worth othing to my firm. (I worked for the old firm.)

Kelp in these days, and ever since other sources of ocuring iodine were discovered, must contain a very rge proportion of iodine to be profitable. There re by-products from kelp; I think black bottles and ap and some kinds of soda; but my knowledge on is point ends with putting kelp on board a coaster r Glasgow.

The entire coast from which the company got its supply was superintended by a Mr. John Stephens in my time. He visited all the agencies frequently during the season, tested and took samples of the kelp, compared prices to see that too high a price was not given by the local agents, and that the bad kelp was not purchased. The kelp-makers of those days depended entirely, I may say, on drift-weed for supply. To remedy this I remember Mr. Stephens tried all he could, even to the extent of advancing money to purchase boats, or getting the landlords to assist in supplying boats, in order to start the people to cut the weed, instead of depending on the mere drift. This ended in failure; the people could not be got to change from the old way, or add to their profits by cutting.

I believe one ton of kelp made from cut weed is worth two made from drift, especially after 1st June.

Certain other weeds produce no iodine, but these unprofitable weeds make much harder kelp than the iodine-producing weed. Agents had to constantly visit the different shores to see that the people did not save the bad weed, and when found either have it destroyed or find out the people who were saving it. This was done more in the people's interest than anything else, as an experienced agent could tell by testing if bad weed had been used. In fact, in most cases I could tell before testing, and it was only where bad weed was used that I tested, so as to convince the seller that I knew what had been done.

Another trouble was sand and stones. Kelp was burned on a sandy beach, so that sand and small gravel stuck to the bottom of the kelp to the extent of one or two or more inches, and some round stones would get in somehow into the centre of the blocks; in such cases the agent had to make deductions in weight for sand, etc., or impose a fine where kelp was burned on certain shores ordered to be excluded.

Kelp absorbs moisture even in the store, and it was often left out too long after burning, and not properly covered before bringing to the stores. This had to be taken into account in the weight, as it injured the quality.

If the kelp industry was properly worked I believe the profits would far exceed those expected from the fishing industry.

A chemical factory could be started in some central place on the coast, say Westport or Sligo, and then develop the cutting of weed. In my time if the weed was cut it had to be cut out of an open three-ton boat, with a large hook like a reaping hook with curved irons to catch the weed; this was attached to a long pole which it took two or three men to work. One boat-load would be as much as could be got at a tide, as it had to be cut at low water.

Means of procuring this weed on a large scale with less labour could be devised, just as steam trawlers have come in to supersede the old ways of fishing. There are plenty of people who know how to burn kelp, so the young men would not have much difficulty in learning.

If the kelp industry was revived I believe the population in these congested districts would be doubled. I also believe that if the Government or the Congested Districts Board insist on removing these people, and that later on what I propose is done, those removed will either sell or leave the land given to them, and go back to their old quarters, and follow the business of their forefathers.

Although weed grows along most shores on the West and North Coast, it only drifts into certain places in rough weather. I suppose this is owing to currents.

I am only acquainted with the west coast but there must be weed along the north coast of Antrim, as Mr. Stephens offered me an agency that he intended starting there some years after I had given up the work.

APPENDIX I.

Kelp-making requires a good deal of ground for drying the weed unless it could be dried in sheds.

The advantage of cutting weed is that you get it all along the coast, and can procure it day after day, and dry the weed on shores where the drift-weed does not come in, thus enlarging the area and quantity.

As a rule, when drift-weed does come in it arrives in such quantities that it rots on the shore before it can be removed, and a large quantity is thus lost.

Between now* and next April a great deal could be done in preparing for experiments on suitable parts of the coast.

First of all find out (1) where the weed is growing in sufficient quantity, (2) the most convenient shore to unload at, and (3) where the weed could be dried free of sand or small shingle.

If two or three families joined in a boat of three or four tons with proper tackle, and divided the profits, it would be the best plan. My recollection is that in former years this used to be done.

A great advantage of kelp-making is that it gives employment to so many members of a family. The men cut the weed, and bring it to shore, when their wives and children can assist in carrying it to the spreading ground, after which the work is much the same as saving hay until it is put into large cocks. The weed must be left in these cocks for some time to heat or get into a dry, soft condition. If burned fresh, when dry and crisp, the return would not be so good.

I daresay the purchasers would be prepared to give a fair price, and purchase all the kelp that could be made, provided the quality was kept up to the proper standard.

Sea rods collected in the winter add considerably to the quantity and quality of kelp. It is much easier to burn the weed when you have sea rods, as they prevent the weed from getting clogged in the kiln.

Kelp, to be well burned, must be kept in a liquid state from start to finish, so that when tempered or mixed with iron rakes in the evening it will cool down into one hard block like lead.

From what I have heard of the Parish Committee system of the Congested Districts Board I am inclined to think such committees might be made the means of reviving this great industry, of extending it beyond anything that has hitherto been attained, and of getting the workers to understand that it would pay them to make the best article, or to save the "Coughlagh" weed in the best possible condition, and carefully avoid every form of adulteration.

Passing from the subject of kelp, I wish to say something of my experience as a farmer. I farm nearly 200 acres, principally grazing, and I manage over 600 acres for landowners, buying and selling all classes of cattle from calves to stores, springers, and fat cattle, according to the class of land I have to manage.

I consider that the Irish graziers have been the means of keeping a high-class breed of stock in the country, not only to perpetuate the species, but to get the best price for the finished article, either as springer, milker, or beef. I have been buying and selling cattle for over thirty years, attending fairs and competing with the cattle dealers, and I have always considered that it paid me to secure a well-bred animal, even if I gave up to ten shillings more for it than a dealer would give. I believe it will be disastrous for the small farmers of Ireland if by any change of system they are left depending on cattle dealers and English markets for the sale of their calves and young stores. Ireland can produce first-class grass-fed beef. In England and Scotland most of the beef has to be finished by hand-feeding.

The congested districts are on the sea coast, and in order to relieve congestion it is proposed that the Government Departments and the Board should work inland by getting rid of the large grazing farmers, buying them out, dividing their lands into small holdings, and giving them to people who have been accustomed to making a living by other means (such as fishing, kelp-burning, or migrating to England or Scotland as labourers), who know little or nothing about farming, and whom it will take generations to instruct (in the meantime to be spoon-fed at the expense of the taxpayers), and even then it is a question to be solved whether the change will be a success or not.

The principal products of Ireland for food and export are beef, butter, pork, fowl, and eggs. The production of beef is the principal source of revenue to the Irish farmers, large and small, from the farmer who can only keep one calf till it is six months old to the large grazier who turns out the finished article.

Farm produce, like other commodities, has its different stages of production before it comes to the final stage and is ready for consumption.

I now propose to take beef through its different courses, and will begin at the bottom or first course.

Any person who has experience of Irish fairs knows that if he wants to purchase, say, thirty or forty calves he must buy them in ones or twos. Very rarely will he find a farmer who has from three to six calves in one lot to dispose of. The man with two or three calves is the class the Congested Districts Board wish to increase. A calf is not beef. Why does the farmer sell it? because he has only got from five to fifteen acres of land, and can't keep it longer.

The farmer with from twenty to thirty acres keeps three or four cows on the portion of his land outside what is required for tillage, a couple of heifers to take the place of cows, or to keep up the stock of milkers. He must get rid of the calves when they are nine months to a year old; having no room or feeding for them, he passes them on to the next stage.

Matters might be made easier if farmers could order heifer calves as required, but the course of nature provides for them bull calves (latter turned into bullocks) in the proportion of nearly three to one.

Small farmers cannot afford to keep even one bullock calf once it has reached nine months or a year old, for several reasons; in the first place they have not room, and in the second place the land, even if they could keep it, is not capable of turning it into beef.

There are many farmers in mountain districts holding large tracts of land suitable for keeping milch cows; also farmers in low-lands who cannot keep the calves after they get to the weaning stage, for the reason that they are too well-bred, the cows having been served by a well-bred shorthorn. It pays these farmers to rear calves by good bulls to a certain age, but when it comes to dispensing with the hand-feeding they must be handed over to the man who has land suitable, and a sufficient area to keep a number of them. If these farmers sent their cows to an ill-bred bull they would not get a remunerative price for their calves.

Who keeps these well-bred shorthorn bulls? The large grazier.

Farmers arrange the class of their cows by sending a certain number to bulls whose progeny is likely to suit the class of land (this remark refers to mountain and poorer districts) that is to produce the heifers they wish to keep, to take the place of milkers when the latter get too old to be profitable.

Leaving out the mountains and moors suitable as grouse preserves one might say that nine-tenths of Ireland is as suitable for tillage as for grazing, but in stating this I do not class all the grazing as fattening land.

I have got to the stage when the calf is nine to twelve months old, but has twelve or eighteen months longer to live before it is ready to turn into beef; who is to keep it in the interval? From this age of nine or twelve months, when the calves are sold by small farmers (who cannot keep them longer) until they reach the age when they are ready to fatten by large graziers (say, 2½ year olds), it is not necessary to feed them to a greater extent than is required to develop their growth, and keep them in a healthy condition. A larger class of grazing farmers take these calves over, buying according to the class of land they are to be fed on, and keeping them as long as the land is fit to feed them. I might say in many cases there are two or three changes between the nine or ten months and the 2½ year old stage, as some lands are only suitable for summer grazing, all the stock being removed during the winter months, with the exception of a few head.

It would not pay to keep these cattle on fattening land from start to finish, and even if it would, there is not sufficient fattening land in Ireland to do it.

The large grazier who finishes these cattle looks to small profits and quick returns during the six or seven grazing months of the year, buying his stores in April and May, and selling at intervals up to November, or middle of December if it is an open winter.

* September, 1907.

Some graziers keep the different classes of land required, so that they can pass them on through the different stages by changing them to different farms. In this way many lay in their supply as calves from the small farmers.

I have already stated that nine-tenths of the land is as suitable for tillage as for grazing. According as you increase the tillage and small farms you increase the production of young cattle (calves from nine to twelve months old), but you reduce the area required for keeping the young stock till they have reached the age suitable for beef, and you also reduce the area that is required to turn them into the finished article.

The law of supply and demand that has been adjusting itself for generations in a natural way according to requirements must be considered.

In order to produce a good calf the small farmer must get the service of well-bred bulls (they need not be pure-bred), costing at age of thirteen to fifteen months from £10 to £20 and £35, or more, according to breeding and quality. A small farmer cannot afford to buy a good bull, and if he could, in nine-ten out of twenty cases the bull could not be fed; he must get good pasture in the season and hand-feeding in the winter—in fact, a certain amount of hand-feeding all the year round. These bulls are purchased by the large farmers or graziers, and for their service small fees are charged, from 2*s.* to 3*s.*, and in a few cases more, where the animal is above the ordinary run of bulls.

The farmers who keep these bulls are the men on whom the small farmer depends to buy his one or more calves, when he must pass them on; they are also the men some of the official and other witnesses want to do away with.

These grazing farmers as far as possible purchase their young stock in their own neighbourhood from small farmers whose stock they know. According as the small farmer is increased in numbers so will the demand for young stock diminish.

If the sources from which the Irish farmers and people get their living improve, or allow of more workers, so will the population increase; but to try and increase the population first by cutting up the country into small farms, and building houses before the problem of how they are to live is settled, is a case of putting the car before the horse, and should be seriously considered before it is too late.

Civilisation, education, and machinery, and, I might add, Land Acts, have changed the Irish farmers; they have learned to live better than their forefathers, and to do this they must have more room. Young people, who must attend school till they are fourteen, get a fair education, at any rate, sufficient to make them decide that they are not going to begin life by sitting down on a small farm, and working it with the spade for the rest of their lives when they feel they can do better. Unless a farmer has a reasonable-sized farm he cannot employ machinery and horses, and he cannot work a larger farm unless you provide him with additional capital. APPENDIX I.

Thousands of labourers' cottages are being built with acre plots added. It may be decided later that one acre is not sufficient, and that they must get three or more acres. At whose expense will these plots be given—at that of the industrious farmer who is just beginning to feel that he can live comfortably, and perhaps before his days are ended be able to settle some of his children on similar-sized farms to his own.

There must be hewers of wood and drawers of water till the end of the chapter. The present condition of the labour market in rural districts does not show that the supply is in excess of the demand—quite the other way.

Families (so-called labourers') are taking these houses and plots of ground just because they think there is something to be made by them, in the same way as people took seed potatoes, thinking they were getting the seed for nothing at the expense of somebody else.

Will the children of these labourers (who must attend school till they are fourteen) take their parents' places, and work the few acres with their spades.

You cannot raise the level of one class without lowering the others, if it is tried by artificial means, which I say is the course advocated by many of the witnesses. One class cannot live without the other, and in order that both may make a living there must be a higher to keep the lower going; if all were in the same level the world would not be worth living in.

Improve the resources of the country by every means possible, and the people will improve themselves. Don't try to increase the population first.

APPENDIX II. APPENDIX II

Document put in by Mrs. Caroline Blake.

Notes on Conditions of Life in Renvyle.

Board of Works loan, £1,500 to Henry Blake. The reason that the whole £1,500 was not taken by Henry Blake after the famine was that he had to sell half of his estate (now Kylemore Estate), on which the money not spent on Curragh farm was to have been spent. £106 had been spent on one part of it before sold, and £36 on Renvyle Demesne; all the rest on Curragh farm of the £904 19*s.* taken.

I paid some of this loan since I was left a widow—when trustee of my son.

It is those who allowed the poor man a chance of living who are getting trouble. People came from other estates, and even from Scotland, on account of the cheap land, seaweed for manure, and work given. Renvyle had been before the famine one of the great herring fisheries. Three hundred boats used to go out from our beach, and large ships used to come to take the fish. With the blight of the potatoes came also the fish leaving the coast, so of course the people suffered much; there was then no kelp here. It was my husband, Edgar H. Blake, R.N., who brought the trade back here. He gave and secured spread ground, and brought men to teach the people. Kelp had been made forty or fifty or more years before, but the people had put in sand, and broken up the business. Mr. Steven, the Messrs. Patterson's agent (now Kaisly and Co.), called one day about 1852, and told my husband that if he could secure spread ground, he thought money was to be made, and Mr. Steven it was who arranged that the royalty was to be 1*s.* 5*d.* Afterwards, when the price fell, I, without being asked, reduced it to 1*s.* 4*d.* Mr. Hazel, the present agent, it was who asked me to take a settled amount. He mentioned 10*s.*, but I had just bought all my lands, and paid a large sum, and I said I could not take less than 12*s.* 6*d.* per ton. If my farm was taken from me it would stop the trade, and so also injure my demesne and islands. The kelp manufacturers have paid thousands and thousands to Renvyle tenants since 1862.

Grazing.

The mountain which with the demesne I hold as tenant proprietor I set in grazing always both for sheep and cattle; also sometimes I have sheep and cattle of my own. I want all I have for my business. After I opened Renvyle House as hotel I bought *the tenant-right* of the mountain from a tenant who was selling it. I paid for this £100. I have the fishing and shooting on the whole of the Renvyle Estate secured to me by lease, and bought afterwards in Land Judges Court. If game, which they never had, was given to the tenants there would be no game either on holding or on my land.

If you were wanting to buy one of the small holdings on Renvyle you would then know the value the people put on them. One of the questions I was

APPENDIX II.

asked, whether I thought it right to keep land when people round me had only small holdings, would apply to more than land. There were many, even in the Clifden Courthouse, who might like to have got any of the Royal Commissioners' wardrobes if they would get the Government to buy it for them at half the value, leaving the Commissioners without, and certainly many who live in great houses in London, while others have to struggle for a livelihood in small hovels in the poor towns in Ireland might be asked the same question. People have come into Renvyle Estate without, as the people say, a "second porringer," and are now well off. The people often tell me of this one and that; and even within the last forty years I know of some myself and a great many return from America and settle down here.

APPENDIX III.

APPENDIX III.

APPENDIX IV.

Documents put in by The Right Hon. The Viscount Gough.

Consolidation of Small Holdings.

A.—Abstract of Dr. Gentrsch's Report.

1. Consolidation implies an exchange of lands in the same locality, so situated as to make economical working impossible.

2. Object of exchange is to give each proprietor a compact holding.

3. Such exchange must often be effected against will of part of the proprietors. What proportion must apply for it must differ according to local circumstances.

4. Consolidation likely to be especially beneficial where owners can only reach their holdings by passing over lands belonging to others.

5. Compromise between parties interested to be effected by giving of lands of equal value, but payment of money to be allowed only in special cases.

6. Lands received in exchange to bear burden of mortgage debt attaching to lands given in exchange.

7. Formation of companies to promote consolidation of holdings and watch over common interests.

B.—Saxon Law of July 23, 1861.

§§ 8. Negotiations to be initiated, even if the request be made by a single owner.

A special Commission effects the consolidation. Consolidation obligatory in some cases.

§§ 10. Pieces of ground from a neighbouring district can be brought in.

§§ 13. Participators must obtain land of the same value as what they gave up, and must not suffer in any way.

SAXE-COBURG AND GOTHA.

A.—Law of June 23, 1863.

Evils of Scattered Holdings.

1. Loss of space along each boundary.

2. Opportunities for strife and law suits.

3. Waste of time and labour for men and animals in the journey from one holding to another.

Paths are sure to be bad if they exist at all. This injures the carts, which are also not filled.

Advantages of Consolidation.

1. Gain of cultivable acreage.

At Altingottern, in Nassau, before consolidation the boundary paths were, roughly, 1,220 miles in length: after its accomplishment they were reduced to 80 miles.

2. Clear boundaries, diminution of picking and stealing. The smaller holdings are generally put together near the village, the larger ones further off.

3. Saving of manure and seed; also horse labour. In travelling from one plot to another much manure is lost.

4. Saving of time.

In a year this comes to a great deal, the man not losing time going from plot to plot.

5. Convenient shape of farm.

As far as possible each farm is made four-cornered.

6. Betterment of cultivation.

Drainage is impossible with sub-division.

Use of ploughs and other implements is made difficult.

Method Employed in Coburg.

Arable land carefully examined by experts, and divided into eleven classes according to yearly value, and marked by posts. Meadows divided into two classes.

A difficult series of reckonings are made, and each man gets the same value as he had before, though it may be a different class of land. So far as possible each man's preference is attended to.

Consent of Interested Parties.

In Coburg, where consent of half of proprietors was required, Act had been almost inoperative, but widely resorted to in Gotha, where consent of quarter was sufficient.

B.—The Laws in the Kingdom of Saxony relative to the Advancement of Agriculture, and particularly to Present Holdings.

Acts Relating to the Consolidation of Land.

1. Purpose and object of consolidation.
2. Kinds of land which may be consolidated.
3. Compromise between the persons interested in the consolidation of the land.
4. Proceedings on the consolidation.
5. Companies for the purpose of consolidation.
6. Acts as to the alteration of water-courses and the execution of drainage and irrigation works, and the establishment of a rent bank having for its objects the advancement of agricultural interests.

The State of Saxony has shown a Desire to Promote the Consolidation of Small Holdings.

(*a*) By provisions which for the advantage of the parties interested make possible—on the application of one party only—the releasing of the land from burdensome servitudes and other incumbrances, as well as the division and the alienation of lands vested in the parish, and of which the individual members thereof have the direct use; to raise the peasant class, as also to advance all agricultural developments, and it has for the attainments of these objects passed the Act of the 17th of March, 1832, relating to the redemption and division of land held in common, and several supplementary Acts, and particularly the Act of the 17th of March, 1832, as to the constitution of a land rent bank.

(*b*) By the passing of the Act of the 23rd of July, 1861, respecting the consolidation of lands, and in conjunction herewith of the Act of the 29th of April, 1890, relating to matters in common of the companies formed for the aforesaid purpose, *i.e.*, the consolidation of land, to cause—even against the will of a part of the occupants—the consolidation of lands, *i.e.*, such an exchange of lands belonging to different owners, but which are situated promiscuously, by

APPENDIX IV.

which a site is intended to be given to each owner as near and adjoining and favourable to the management of his estate, as possible.

(*c*) By making compulsory regulations.

(i.) For carrying out the alteration of a watercourse and maintaining the same, the execution of which, being highly in the interests of the cultivation of land, has been proposed by an interested party, and has been sanctioned by the State, for the owners of those lands and waterworks the value of which is enhanced by the alteration.

(ii.) Concerning the permission given for the necessary preparation for the purposes of executing drainage or irrigation works that have been sanctioned by the State—including the plant necessary for the stemming and deviation of water—to be executed by each owner of land against compensation for the servitudes imposed or the damages arising thereout or therefrom, and has minutely specified these compulsory regulations in the Act relating to the alteration of water-courses and the execution of drainage and irrigation works of the 15th August, 1855, and the Act of the 9th February, 1864, explaining the former, as well as in the notification of the 22nd February, 1870.

(*d*) By opposing an uneconomical severing into small portions of lands, situate and being in the country, by passing the Act relating to the divisibility of the ownership of land of the 30th November, 1843.

As to the details thereof the following may be stated:—

The Act dated the 17th of March, 1832, relating to the redemptions and divisions of lands held in common, and the supplementary Acts of the 21st of July, 1846, and of the 15th May, 1851, as also the notification of the 18th of February, 1876. The Act as to the establishment of the Land Rent Bank, of the 17th of March, 1832, besides the Order for carrying into effect the same, dated the 30th December, 1833, as well as supplementary Acts of the 20th September, 1855, Notification of the 21st January, 1860, and the Act of the 25th February, 1888.

1. *Purpose and Object of the Redemption.*

Until the passing of the Act of the 17th of March, 1832, the present holdings in the kingdom of Saxony were in many ways burdened with different kinds of oppressive servitudes and incumbrances. These burdens caused great hardship to the occupiers of such holdings, and hindered agricultural progress. Besides the burden of the general public taxes due to the State, municipality, and parish, the peasant farmer had to bear numerous taxes which were charged upon his holdings, and which arose out of rights of landowners and landed proprietors, Vogteiherrschaft, Government officials with petty jurisdiction, and through the power wielded by the Church. All these duties which consisted of services to be rendered, the obligation to pay money, and of payment in kind, or of a tenth, formed a hindrance to the development of a well-to-do, free peasant class. The purpose and object of the aforesaid Acts was to remove such a hindrance. The provisions of the said Acts permit generally, to every landowner, and where the ownership is disputed, to every occupant of the land who has a right to the performance of a duty which may be redeemed, or is compelled to perform such a duty, to apply for relief, *i.e.*, on his own behalf, and even against the will of the other party, to bring about the redemption, or the extinction of a legal relationship which has for its object the performance of a duty, which may be redeemed by payment of compensation to the party entitled thereto. All contracts already entered into on the publication of the Act, *i.e.*, all contracts entered into voluntarily by the parties interested and having for their object the extinction of the duties, were not to be effected by this Act (17th March, 1832), in their validity, in so far as in the contracts there are no continuous services or duties stipulated for, or such servitudes are agreed upon, which according to the provisions of the Act may be redeemed. Should there be such stipulations the said Act shall be applicable thereto, and the said services or duties shall be also redeemable on the application by one party.

2. *Subject Matter of the Redemption.*

The redemption extends to all payments and incumbrances charged upon ground or landed property, and which have to be rendered to private persons, companies, charitable and other kindred institutions, and especially to the State.

(1.) Services and personal services.

(2.) Payments which are charged upon land or which are continually payable by certain persons.

(3.) Servitudes with the following rights over the land of another:—

(*a*) All rights relative to the tending of cattle on arable land, meadow, grass lands, ponds, forests, woodlands, and other places of pasture.

(*b*) Rights of forest relating to the felling of wood, the right of gathering litter and loose wood, plucking roots and pulling wood, and the right of scraping resin.

(*c*) Rights to fetch grass, reeds, and sods, as well in woods as on other property.

(*d*) Rights for digging and fetching on the land of third parties the sand and clay for building purposes.

(*e*) Rights to use stone beds belonging to others.

4. Erbpachtsqualitat lands having the quality of hereditamentary lease, *i.e.*, land held by a lessee who is obliged to pay a rent to the lessor varying with the profits, but generally having power to sell or devise such lands, the lessor having the right of re-purchase and pre-emption.

Or Erbzinsqualitat lands granted by the owner under contract on payment of rent by the occupant as an acknowledgment of the grantor's title, but with power for the occupant to devise the land to his heirs or to sell, in case of the devise being to others than the heirs of the occupant, then the grantor is entitled to a money payment from the devisee the grantor has on sale the right to object to an unfit purchaser. If the occupant dies without issue, then the lands revert to the grantor.

5. Rent issuing out of Erbpacht—Erbpachtscanons rents of real Erbzinsland, Allodificationscanons and canons for Lehnpardens—rents paid on converting a fief into free ownership—freehold—and other ways of pardoning the performance of services by the Sovereign.

The above is not Applicable to:

(*a*) The duties having the character of State, municipal, or parochial duties.

(*b*) Tenths and other duties relating to mining and the getting of stone, lignite, and peat.

(*c*) Interest upon capital which has been sunk for endowment purposes.

3. *Legal Methods of Redemption.*

Provided the interested parties do not agree amongst themselves upon some other method of redemption, the redemption takes place:—

(1.) In cases of personal services and other duties by means of:—

(*a*) Payment of a definite sum of money.

(*b*) By agreeing to pay a yearly rent.

(2.) In cases relating to servitudes, besides the beforementioned methods of redemption in (1) (*a.*) and (*b.*).

(*c*) By the conveyance of land.

(*d*) So far as particularly respects the rights of felling wood, of plucking roots and pulling weed, and of gathering loose wood, by payment of a yearly tribute consisting of a certain quantity of wood.

The choice of the different legal methods of redemption rests with the party liable, and in such way that he can make compensation on redemption, in part, in one of the hereinbefore stated methods, and in part in the other. Only the party liable who has on his own account applied for redemption has a limitation placed upon his rights as to whether redemption shall be allowed upon payment of a definite sum of money, or the payment of a rent. In such a case the party entitled may demand payment of a definite sum of money when by this he is enabled to pay for the alterations rendered necessary by virtue of the redemption, *e.g.*, that for the purposes of husbandry, he must provide more cattle or tools and implements, or must erect new buildings

r alter buildings already erected on the ground of
n increase in his servants, or desires to make other
utlays for the purposes of husbandry rendered ne-
essary by virtue of the redemption. Whether a
ufficient reason exists for the demand has to be in-
estigated by the Special Commission (compare 7,
.), which is also empowered to fix the sum to be
aid.

The amount payable for the redemption of the rent
s paid on the understanding that if the redemption
akes place by payment of a definite sum, twenty-five
imes the amount of the yearly value in money of the
ede mable duty or servitude is to be paid. On the
edemption by agreement to pay a rent, this rent is
o be fixed according to the yearly value of the re-
emable duty or servitude ascertained in the pro-
edings for redemption. If the party liable has
eclared his intention to pay a yearly rent then the
arty entitled thereto has the choice between ac-
epting an annuity bond or direct payment of the
ent by the party liable, excepting particular cases
nentioned in the Act, in which cases the rent is
ot payable to the Rent Bank, but absolutely to the
arty entitled. In case of the acceptance of annuity
onds the money rents are not to be paid by the
arty liable to the party entitled thereto, but to the
nstituted Land Rent Bank (compare 8), and this
ank issues annuity bonds, with the effect, that on
ssignment of the rent to the Land Rent Bank the
laim of the party entitled, which has arisen by
irtue of the redemption, together with his legal
ight against the estate liable, passes to the Land
Rent Bank.

All money dues charged as real incumbrances on
he land or property, or on rights which the law con-
iders land and property, may, on application of the
arty entitled or liable, be redeemed in such manner
hat the party liable has the choice either of direct
edemption, and that by a money payment of twenty
imes the amount, as hereinbefore stated, or by giv-
ng annuity bonds to the value of twenty-five times
f such amount, or in both ways at the same time,
r for purposes of indirect redemption, may assign
he money dues to the Land Rent Bank. Redemp-
ion rents which have not been assigned to the Land
Rent Bank can at any time, on previous notice, be
edeemed by the party liable on payment of a
lefinite sum of money.

The legal nature of the rent, whether payable to
he Land Rent Bank or the party entitled thereto,
whether payable in money or kind—assuming that
he transfer has been carried out according to the
provisions of the law—is considered according to
aw to be a real incumbrance (onus reale), which is
harged upon the land or property liable, and which
s not extinguished by a change of ownership aris-
ng in any manner whatsoever, but passes with the
roperty chargeable therewith, without further Acts,
o each and every subsequent owner.

From the time of the notification of the Act duties which are subject to redemption according to the provisions thereof cannot in future be acquired by contract.

3. The hereditary lease (Erbpacht) and the here-
ditary ground rent (Erbzins) are redeemed in the
following manner:—

(*a*) The hereditary lessee and lessor are at liberty to release the land from the hereditary lease by raising the yearly rent to be paid thereout by five per cent. By this increase of rental the right of pre-emption which the lessor has is redeemed and extinguished, so that the leased property becomes absolutely free (freehold). The increased amount of the yearly rent, as well as this rent itself, remains chargeable as a ground rent on the incumbered property. With the release of the hereditary lease the land takes the qualities of an ordinary freehold farm, in the complete ownership of the occupant, charged with a rent (not hereditary ground rent).

After the publication of this Act hereditary leases can no more be validly entered into.

(*b*) The occupier of the property charged with hereditary ground rent (Erbzinsmann) and his landlord are authorised at any time to effect the redemption of the legal relationship existing between them, and the conversion of the land or property into property of a complete and free ownership (freehold) on the occupant agreeing to increase the yearly hereditary rent by three per cent., and by virtue of this, the ownership of the landlord, together with his right of pre-emption being extinguished. With the redemption of the rent of a hereditary lease, or of a hereditary ground rent not yet converted into a bare ground rent according to the provisions of the Act, must be connected the releasing of the land from its qualities of hereditary leased land, or of land charged with a hereditary ground rent, by means of increasing the rent of the hereditary lease by five per cent. or the hereditary ground rent by three per cent.

4. *Extinguishing of the Redeemable Incumbrances and Servitudes.*

All incumbrances and servitudes which may be extinguished on application of one of the parties, with the single exception of the redeemable rents and money dues, are, as and from the 1st of January, 1854, abolished (provided that no application had been made before this date) in such manner that they continue only as personal obligations of the occupant in possession on the 1st January, 1854, and of his heirs, so long as the former or the latter do not convey the land to a third party. After the expiration of this period the incumbrance, if entered in the Land and Mortgage Register, is extinguished on the certificate of the General Commission that the redemption of the aforesaid incumbrance or servitude has not been applied for by any party.

On the 1st of January, 1884, also, the then subsisting personal obligations of the owners still in possession of the property liable are extinguished.

5. *Purpose, Object, and Subject Matter of the Divisions of the Land.*

The division of the lands which have been used in common, so-called Allmenden, "was to make possible a rational course of husbandry," as up to that time a division of the property belonging to the community could take place only through resolution of the representatives of the parish, and so far as such resolution was permitted, and with regard to that property belonging to the parish to which were attached no personal rights of user by the individual members of the parish, for this reason: it was to the interest of the peasant farmers, and for the purpose of raising his position to divide also these common lands which could not be alienated to the individual members owing to the direct rights of user attaching thereto by the individual members of the community. According to the provisions of this Act, only such lands shall be available for common division which are in the ownership of municipal corporations or parishes, and to which the members of te community or of the parish are entitled to the direct use. The Act, however, exempts from a common division such lands situated in the towns and in the country the use of which is intended for the profit and interest of the entire community. Each and every member of the municipality or parish settled within the limits thereof, and entitled to take part in the use as and in manner hereinbefore mentioned, has the right to make application on his own account for division of the land being available for division in common, and to obtain the portion of such land due to him for his own absolute property (freehold). Those parties who are entitled to the right or user in the property—but have not become settled in the municipality or parish as aforesaid—can only claim compensation by a rent. The right of participation in the user of those not settled in the parish, must be redeemed by fixing a rent, which they are to receive from those members of the community who obtain a share or portion of the land; the amount of the rent is to be calculated according to the value of their aforesaid rights of participating in the user. Such rent shall be paid yearly so long as the said circumstances entitling them to such participation exist.

APPENDIX IV.

In case of the death of the parties entitled to the rent, or in case the aforesaid circumstances which entitled them to the participation in the user cease to exist, then the rent goes to the funds of the municipality or parish. On application for division it must be proved that the division can be carried out, and that it is advantageous, with the exception of those cases where the division of lands held in common for the tending of cattle (waste lands, green swards, and similar places), or of meadows and fields belonging to the municipality or parish is applied for. The division of forests and woods belonging to the parish is only then to be considered advantageous if either the separate lots remain favourable for use as forests or the soil can be used with greater advantage as fields or meadows after the removal of the wood.

The Division takes place in proportion to the rightful interest of each party entitled to participate in the user of the land in question. If the rightful interests of the individual members of the municipality or parish are specially determined by local custom, local statutes, contract, or a final judgment, then such divisions must take place according to the proportions as determined by such local custom, statutes, contract, or final judgment. Each participator in the division shall have his portion allotted in that locality most advantageous to him, and so far as this can be accomplished without prejudice to the remaining participators. No participator in the aforesaid division is by reason of such division to be hindered in the use and enjoyment of the land already belonging to him, nor is his use and enjoyment to be made difficult or in any wise prejudiced. In so far as it may be necessary to remove such a hindrance or difficulty, new servitudes may be imposed. Instead of a division taking place a sale of the land belonging to the municipality or parish may take place, provided that the money to be realised by the sale shall be applied for the continual benefit of the whole community, or of all its members interested in the division of the money realised.

6. *Consideration of the Rights of Third Parties on Redemptions and Divisions.*

Should the land or property to be taken for division be subject to any claim by creditors, viz., creditors whose claims are mortgage claims or other real incumbrances on the land subject to division, feudal lords, persons having estates tail, hereditary lessors, persons entitled to hereditary ground rents, persons entitled to other rents, persons entitled to re-purchase the land or property, then in these cases the aforesaid persons have no right to oppose the redemption or division of the land or property. However, the rights of the aforesaid parties must be taken into consideration in cases of redemption cases on the adjustment of the paid capital and the distribution of the annuity bonds which have been issued. The party entitled may for the purpose of securing the aforesaid parties deposit the annuity bonds with the Court, according to the amount of the sum to be secured, or may sell them. If redemption takes place by payment of a definite sum of money, then all those creditors who have any claims against the land have a right to demand payment in order of priority out of the monies paid on redemption, or to demand that such sum owing as aforesaid shall be placed on deposit until satisfaction of their claims is made. The officials of the Mortgage Registry in which the land affected by these provisions is registered, or those officials whom they may authorise, have to attend to the protection of these claims. The owner of the affected land has, however, a claim to a share or portion of the money paid or of the annuity bonds, so as to enable him to pay for alterations or new erections on the same grounds upon which (as stated above under No. 3) the party entitled may demand payment of capital for the necessary alterations, additions, or erections for the management of his estates.

On the division of lands held in common the officials of the Mortgage Department have only then to protect the rights of third parties in case the occupant desires either on allotment to relinquish or transfer the portion of land allotted to him or subsequently to sell it. The purchase money for this portion of land is to be applied for securing the rights of third parties who may be interested in the manner as hereinbefore mentioned in cases of redemption by the payment of money.

7. *Proceedings on Redemption and Division Matters.*

The officials for redemption and division matters, and all matters in connection with these are:—

(*a*) Separate Special Commissions.

(*b*) The General Commission.

(*c*) The Superior Courts.

(*d*) The Ministers of State (Minister of Justice and Home Office).

(*a.*)

The Special Commission is the lowest tribunal, and is appointed by the General Commission in such cases of division which may arise. The members thereof are:—

(i.) A person with the necessary legal knowledge qualifying him to act as a judge.

(ii.) An agricultural expert with the necessary theoretical and practical knowledge of his profession, and in connection herewith regard is to be had to those proprietors who are possessors of their own land or rent large holdings.

Those parties interested in the redemption of the division are permitted to make fit suggstions to the General Commission for the purpose of appointing a Special Commission. The proceedings of the Special Commission have to take place at the *locus in quo*, with the assistance of the parties. The division of the work of the Commissioners is as follows:—The discussions concerning the redemption or the divisions are generally carried out until the final termination by the Agricultural Commissioner, and by him alone, in so far as no particular complications and legal difficulties render it otherwise necessary. The termination and the drawing of the scheme is left in the hands of the legal Commissioner.

The Special Commission has to prepare protocols of the proceedings, and give a report of such proceedings to the General Commission.

(*b.*)

The General Commission is a tribunal for the whole country, and is appointed by the King, and is to continue so long as any matters remain to be performed in connection with the redemptions and the divisions. It consists of four councillors (barristers) and two agriculturists and a president, and in appeal matters the Commission is strengthened by two councillors (barristers) from the Superior Courts. The General Commission appoints the Special Commissions, conducts and supervises their proceedings, and decides complaints and appeals (recurs and appellations). The General Commission for matters relating to redemptions and divisions has since the 1st of March, 1876 (see Notifications of the 18th of February, 1876), been dissolved as a self-subsisting body. The functions appertaining to this body are transferred to the Kreishauptmannschaft (administrative body of a district) at Dresden, for all matters throughout the country what has the official designation, "The Royal Kreishauptmannschaft," Dresden, acting as the General Commission for the redemptions and divisions.

(*c.*)

As the highest Court in third and last instance appeals against the proceedings of the General Commission are decided by the Landesjustizcollegium (the highest Court), and since the 1st of October, 1879, by the Oberlandesgericht (Court of Appeal) at Dresden, the latter Court, *i.e.*, the Oberlandesgericht, decides appeals against decisions of the General Commission which the latter have given on appeals to them from the judgments of the Courts of first instance. In both cases it is necessary that the Court should consist also of one agricultural member of the General Commission, who in deliberations and decisions has the right of voting.

(*d.*)

The highest tribunal which decides complaints against the General Commission, or against the Superior Courts (see (*c.*)) on account of their procedure in cases heard and decided in the matters relating to the severing of the lands, is the Ministry of Justice. The Home Office (Ministerium des Innern), however, decides all other complaints against the decisions of the General Commission, particularly those matters relating to redemptions and divisions.

The proceedings at the Special and General Commission are of a summary and official nature, and the necessary evidence for the decisions is to be demanded and perfected by the Court itself. The parties interested have to appear in person, but their representatives are allowed to attend, and counsel can be heard. Subpœnas to attend may state that in non-attendance the party will be fined or other legal disadvantages will ensue. The non-attendance of a party at the first hearing does not prevent the proceedings from being heard and evidence being taken. A subsequent non-appearance of such party after a further adjournment—and after having been informed by the Court of the statements made by the party who appeared—gives the Court power to decide as if the party who had not appeared had admitted the facts adduced by the other. After the determination of the proceedings a plan for the severing of the land is drawn up and laid before the the parties interested for the purpose of enabling them to express their opinions. The protocol of the proceedings and the decisions which have already been given form the basis of the scheme to be drawn. The draft of the scheme is to be shown to the parties, and to be forwarded to the General Commission, who examines the same, and sends back to the Special Commission any objections to be settled, and directs the issue of a public summons by the Special Commission, in which those parties directly or indirectly interested in the severing of the lands are to be requested within a period of twelve weeks—which is pre-emptory—to lodge the necessary application for the consideration of their interests. Any objections which are not lodged within the necessary time are precluded from subsequent consideration. Those objections and applications which are lodged within the specified period, as hereinbefore mentioned, are adjudicated upon by the Special Commission. The draft of the scheme is, after signature by the interested parties, together with the applications and objections which have been determined upon, returned to the General Commission, which examines its contents and construction, and confirms the scheme if approved of. By this approval the scheme acquires the nature and force of a judicial document, which is enforceable without further formalities by execution. Certified copies of the scheme have to be given on demand to the interested parties.

Legal methods of appeal are two: Recurs and appellation. The recurs are allowed against decisions and judgments of the Special Commission which only relate to the severing of lands, and to matters of redemptions where the legal rights in question are not in dispute. In these cases the General Commission is the highest tribunal giving judgment, and only a complaint against such judgment may be brought before the Home Office. Appellation may be made against judgments which relate to procedure or decide legal rights which have been disputed on the severing of the lands. Appellations may also be lodged against the latter decisions which are to be heard by the Oberlandesgericht. No further appeal is allowable. Complaint against officials and individual persons acting in these matters are to be heard by:—

(i.) The Special Commission so far as they relate to the persons appointed by the Special Commission.

(ii.) The General Commission so far as they relate to the Special Commission.

(iii.) The Ministry of Justice or the Home Office so far as they relate to the General Commission, *i.e.*, by the Ministry of Justice if such complaints are in respect of legal disputes, and by the Home Office if only reference to procedure.

8. *The Land Rent Bank.*

By virtue of the Act of the 17th of March, 1832, and the Order dated the 30th of December, 1833, carrying into effect the same, a Land Rent Bank was established on the 1st of January, 1834, for the Kingdom of Saxony, having its head office in Dresden, and comprises three Commissioners, appointed by the King, who are under the control of the Ministry of Finance. The Land Rent Bank is an institution guaranteed by the State, and its duties are to pay all money rents which, in consequence of the passing of the laws relating to redemptions, have been agreed to be paid, and which have, by the choice of the party entitled according to the provisions of the law, not been paid to himself, but assigned to the Land Rent Bank. The redemption rents agreed to be paid for each piece of land or property are, after approval of the redemption contract, forthwith entered into a rent register (Rentenkataster), which is to be kept in every place. By virtue of the assignment of the rents to the Land Rent Bank the legal claim which has arisen out of the redemption, and to which the interested party is entitled, together with the rights against the property (Realrecht), has passed to the Land Rent Bank, against which the bank has issued annuity bonds to the party entitled. The annuity bonds are issued in sums of 1,000 thaler, 500 thaler, 100 thaler, 50 thaler, 25 thaler, 12 ngr., together with talons and coupons. They are bonds payable by the bank to the bearer whereby the principal is agreed to be paid a half year after future drawing (Auslosung). Until such period interest is payable half-yearly at the rate of 3½ per cent. per annum. The annuity bonds have the same legal rights as Government Stock. The two-thirds of profit which is gained by the Land Rent Bank by reason of charging the parties liable on the principal of the annuity bonds which have been issued interest at the customary rate of 4 per cent., and paying interest only at the rate of 3½ per cent. to the parties entitled thereto, will be applied to cover the expenses of administration, the redemption of the annuity bonds by drawings or by purchase in own account, and by these means it is sought in course of time to extinguish the liability for payment of rent. The calling in of the annuity bonds takes place by way of drawings in such a manner that the annuity bonds are by a continual payment throughout a period of 54¼ years extinguished (Act of the 25th of February, 1888). On the redemption of the bonds the entry in the register is officially cancelled, and that without application of any party. Each party who is liable is at liberty after giving a half-year's notice to pay, wholly or in part, the principal, either by a payment in cash or on delivery of annuity bonds, and thereby to extinguish his rents or diminish them. The Land Rent Bank has since the 31st of March, 1859, ceased to accept the assignment of rents, and since the 1st of October, 1859, to issue annuity bonds, for at that time the General Commission for redemptions and divisions and the Land Rent Bank had arranged all requisite matters necessary for the purpose of accepting the redemption rents and rents derived from revenue, and which, according to the provisions of the Act, might be accepted.

"B."

The Acts passed in Saxony as to the consolidation of lands dated the 23rd day of July, 1861, and referring to the common matters of the companies formed for the purpose of consolidation dated the 29th day of April, 1890.

(1.)

Purpose and Object of Consolidation.

On the final settlement it was frequently omitted so to lay out the agricultural lands that a rational course of cultivating the allotments was impossible for the occupants. Also the consequences of the severing of the lands—into small portions—which was permitted, until the limitation of the divisibility of the ownership of the land, were, that the agricultural holdings of the individual occupants

often consisted of a number of parcels and small plots of land which were scattered and situated at long distances from each other, and which could only be worked at the sacrifice of much trouble, cost, and expenditure, and on this account were in proportion to such labour and expenditure of little profit. The consolidation of such lands is an exchange of lands which belong to different owners, but are situated promiscuously, by which a site is intended to be given to each owner as near and adjoining and favourable to the management of his estate as possible. Such exchange shall not only take place by agreement, but even against the will of one part of the occupants; (*a*) when more than one-half of the intended owners of the land have voted to apply for such exchange, (*b*) when thereby the dissolution of a society is affected whose members have a pasture which they possess in common, or over which they have certain common rights (Koppelhutungsverbandes), and without distinction as to whether cattle or other animals of one or different kinds are concerned, or making a passage always giving access to such lands, which lands are so locally situated that they can only be reached for purposes of tilling and using by means of passing with carts or driving cattle over the lands of third parties (closed lands).

(2.)

Kinds of Lands for which Consolidation may be applied.

Consolidation may be enforced in such cases where the following kinds of lands are affected:—

(*a*) Fields, (*b*) meadow, (*c*) waste lands and grass lands.

Lands which are principally used for growing wood or fruit are under this necessity only so far as by reason of bringing the same under the consolidation depends the beneficial carrying out of the consolidation of the lands as hereinbefore stated under (*a*), (*b*), (*c*). The property in pit, coal, lignite, and other minerals not subject to the right of the Crown, and which lie under the surface of the lands to be consolidated, passes, as a rule, with the ownership of the ground and soil to the new owner. By way of exception a particular adjustment is required in reference to the respective ownerships before consolidation of the lands is effected if before commencement of proceedings for consolidation, either the getting of minerals of a like kind has already begun, or the right of getting the same has been transferred to third parties, or even if the separation of the minerals which lie under the surface is applied for before application for the consolidation has been made.

(3.)

Compromise between the persons Interested in the Consolidation of the Lands.

The compromise between the parties interested in the consolidation has, as a rule, to be effected by the giving of land. To each participator is to be granted in lieu of the land which he is compelled to relinquish, ground and soil of the same value, and which is favourably situated for the management of his estate, and as near and adjoining thereto as possible, and with a full indemnification. Payment of money is only permitted by way of exception, and only in cases where, in consequence of local circumstances, and for the purpose of removing disputes about small plots, it cannot be avoided. The lands or property exchanged become the property of the new possessor, and if the lands given in exchange by him were subject to any mortgage debt, then the lands taken in exchange become liable to the same mortgage debt. Information of the draft and plan of the consolidation is to be given by means of certified extracts to the land and mortgage officials (Registry for Landed Property), so as to enable them to enter the necessary particulars into the Land and Mortgage Register.

(4.)

Proceedings on Consolidation of Lands and Property.

The proceedings are conducted according to the provisions contained in the Acts of the 17th of March, 1832, and the 15th of May, 1851, as to redemptions and divisions (compare A. 7). The same Official Act. Also since the 1st of March, 1876, the Kreishauptmannschaft at Dresden has jurisdiction in the matters.

(5.)

Companies for the Purpose of Consolidation.

The formation of consolidation companies for the purpose of watching their interests in matters which relate to their common ownership of lands and their other common rights is permitted by law, and even during the proceedings for consolidation (Act of the 29th of April, 1890), such consolidation companies may, by consent of the General Commission for redemptions and divisions elect a Board of Directors, which represents the company in legal proceedings or otherwise, and in so far, moreover, as representatives have been appointed, the company has the rights of a legal person. In this case a further administrative body of the Company is the members in meeting whose rights and duties are particularly

(*a*) Making general rules as to the enjoyment of land or property held in common, and the maintaining the plant or works in connection therewith, fixing fines for disobedience of the rules.
(*b*) Resolutions respecting the alienation of lands or property and rights, as also the disposition of the moneys thereby obtained.
(*c*) Resolutions respecting the purchase of lands or property and rights.
(*d*) To elect a Board of Directors, and to fix the periods of election.
(*e*) To approve of the accounts to be submitted by the Board of Directors.

For the purpose of acquiring and alienating land or property and rights the consent of the General Commission is required.

"C."

The Acts passed in Saxony respecting the alteration of watercourses and the execution of drainage and irrigation works, dated the 15th of August, 1855. Act explaining the same, dated the 9th of February, 1864, with the Notification of the 22nd of February, 1870. Acts for the establishment of a Rent Bank having for its object the advancement of agricultural interests (Landesculturrentenbank), and dated respectively the 26th of November, 1861, and the 1st of May, 1888.

(1.) Purpose and Object of the Act.

(*a*)—*In Reference to the Alteration of Watercourses.*

If the Home Office has sanctioned the alteration of a watercourse on account of its being highly in the interests of the cultivation of land, the owners of those lands and works the value of which is enhanced by the alteration are liable to carry out and maintain the same in proportion to the increase in value arising thereout. All owners of land or property, and all parties entitled to the user of the same, are obliged to permit, on payment of full compensation, the construction of the works rendered necessary for the aforesaid alteration, to tolerate the disadvantages arising therefrom, and in case of need to surrender the ground required.

The permission for the alteration of a watercourse or of parts thereof can only be given after a plea has been made showing and describing the works necessary to carry out the alteration, and the changes in the water supply of the affected district. The plan is to be made by the Home Office. The Minister is, however, not to give his sanction if parties representing more than one-half of the interests affected by the undertaking (and, according to paragraph 1 of the Act, imposing a liability to contribute to the alteration), object to it. The parties liable form a company, whose duty it is to shore all the banks, and make all necessary works having the object of regulating the course of the water, and protecting the same against damage (with the exception of the plant employed in making use of the water), and to maintain the banks and the aforesaid works, and also in those cases where

he alteration will make no change in the working of he bank or of such plant or works. The rights and uties of the members amongst themselves are regu- ated in proportion to their interests by rules of the ompany, which rules are drawn and approved of by he Home Office. The company acquired the rights f a legal person by Government grant.

b) In Reference to the Execution of Drainage and Irrigation Works.

Each owner of the property, provided that the cheme has been sanctioned by the State, is bound even though the project of the scheme may not be n the highest interest of land cultivation), on pay- nent of compensation, to permit the necessary acts or the purpose of carrying out the drainage or rrigation inclusive of those acts required for stem- ming and diverting the water, to grant the neces- ary servitudes, and to bear all damage arising hereout.

The possessor of works for the purpose of drainage nd irrigation works is bound to permit the owners f land to use in conjunction with him the same ipes so far as such may answer their purpose, and as may be necessary) to extend the preparations or orks made for carrying out the scheme, provided hat this shall not be prejudicial to the original bject.

Permission to construct drainage and irrigation orks is to be granted by the officials (compare 2 elow) after proceedings with the interested parties ave taken place, and at which a plan has been greed upon, in cases where it is recognised that the onstruction of the said drainage or irrigation works s impossible without using the ground or soil of thers, or only possible by an expense out of propor- ion to the circumstances of the case, and that there s no objection by the police, and the undertaker ubmits to conditions which might be imposed for he purpose of rendering sale or maintaining the eans of traffic which is affected by the aforesaid onstruction. The officials can, after application, ut an end to the imposed servitudes and duties definite sums on recurrent payments) when the rainage and irrigation works have become useless, r if they are not further required.

2.) Proceedings on the Alteration of Water-courses and on the Execution of Drainage and Irrigation Works.

For the purpose of attending to all matters in onnection with the alteration of a watercourse a egally competent Commissioner is appointed by the Home Office, who is the lowest administrative official n these matters. For the carrying out of drainage nd irrigation works the Amtshauptmannschaften administrative officials of the smallest district) are he lowest officials. The General Commission for edemptions and divisions (compare above A. 72) s the Court of Appeal against decisions as to the lteration of a watercourse. The Kreishauptmann- chaft is the Court of Appeal in all other matters hich have to be determined upon according to the Act. he duties of these officials are to investigate the acts essential for their decision without application y any party, and they are for this purpose em- owered to bring experts to their assistance. Against he decisions of the lowest officials the legal method f appeal is the "Recurs" to the intermediate fficials, and against the decisions of the latter there s a further "Recurs" to the Home Office, which is nal.

The compensation to be paid and the prices to be iven for "buying out" the parties affected are etermined by experts under the direction of the ials, who have to make known the result to the terested parties, and to transfer to the undertaker f the works the land, or property, or rights to which becomes possessed by the "buying out" of the rties affected. The compensation is, in so far as ot settled by the giving of land, to be made by pay- ent of one definite sum of money, or in recurrent y payments. Parties who are interested in a ter degree within the meaning of the Redemp- on Act (compare A. 6) are not entitled to object the "buying out" or to the transfer to the under- , of the said land, property, or rights bought. the compensation which has to be given by the undertaker consist of the giving of land, or of a rent, then this compensation becomes subject to the rights of the parties remotely interested in lieu of the property so "bought out," but if the compensa- tion consists of a sum to be paid at once, or in a price to be given on the "buying out," then for the purpose of securing the same to the parties remotely interested, such sum has to be paid to the officials of the Land and Mortgage Registry, and the latter have, before payment to the party "bought out," to protect the interests of those remotely interested according to the provisions of the Redemption Act of 1832. (Compare above A. 6.) Appendix IV.

(3.) Landesculturrentenbank.

A Rent Bank having for its objects the advancement of Agricultural interests.

For the purpose of arranging the payments which have to be made by the parties interested on account of the beforementioned undertaking, the Landesculturrentenbank has been established, which is an institution guaranteed by the State. The adjustment of the invested capital is carried out in the following manner:—On payment of a yearly rent for a period of forty-one years, amounting to five per cent. of the sum to be paid, and divisible by four pfennigs, without leaving a fraction, the Land Rent Bank pays to the party liable twenty times the amount in bonds carrying interest at the rate of four per cent., and so far as necessary, cash.

For the rents the payment of which have been assigned from the 1st of July, 1888, only $4\frac{2}{3}$ per cent. is to be paid yearly, and the time for the duration of the same has been fixed at 38 years, and carries interest on the issued bonds at the rate of $3\frac{1}{3}$ per cent. The rents have to be entered in the Land and Mortgage Registry as real incumbrances, and can be redeemed after giving a six months' notice by payment in cash, and are to be paid in four instalments—which are not payable in advance—to the tax collectors of the place, and in other respects resemble the land rents. The Landesculturrenten bonds, by which the principal is paid out, are bond debts of the Land Rent Bank, and made payable to the bearer, and in which the principal is expressed as being 6,000 marks, or 1,500 marks, or 300 marks, and wherein repayment is stated to be made at a fixed period of six months following each drawing, and the interest is stated as being payable every six months, viz.—the 30th of June and the 31st of December, and that the bonds are guaranteed by the State. The redemption to be carried out within a period of forty-one years is accomplished by the use of the one per cent. which the bank takes as profit, as it obtains from the party liable to the rent 5 per cent. or $4\frac{2}{3}$ per cent., the bonds only carrying interest at 4 per cent. or $3\frac{1}{3}$ per cent.

"D."

The Act passed in Saxony relating to the Division of the Ownership of Land, and dated the 30th of November, 1843.

1. *Purpose and Object of the Act.*

By reason of the feudal relationships being abolished at the commencement of the nineteenth century the peasant farmers acquired unrestricted liberty to parcel out their holdings, which had the effect of ruining the well-to-do peasant class. To oppose the disadvantages connected with the free division of land is the purpose and object of this Act. According to the said Act the division shall be restricted only as to estates of gentlemen farmers or fiefs, and those lands which are situated and lie within rural parishes, and are considered as closed lands, with the exception of pasture land or grass land belonging to the village, and parish lands being held in common. From lands the division of which is restricted only so much may be severed at once, or from time to time, that two-thirds of the parcels separately assessable to taxation which (exclusive of the buildings) belong to the estate at the time of passing the Dismemberment Act (Dismembrationsgesetz) remain with the original estate.

Exceptions are, however, permitted in so far as an eighth of the unseverable parcels may be severed in the following cases:—On exchange, severing for carrying on a gardener's business, for the building of dwellings in case the requirements of the pla-

render the same necessary, further on severing for the purposes of husbandry, especially the irrigation of meadows, for the purposes of husbandry and the enlargement of the farm yards with the buildings thereon (Hopheeden), as also for the finishing or rounding off of the circuit of the estate. Where the severing takes place for public purposes, particularly for the object of making ways, vineyards, the erection of trade and manufacturing establishments, etc., no restrictions are placed on the rights of severing, even with respect to "closed lands."

Closed lands are to be considered such parcels of land entered in the old registers (Flurbuch), which, on establishment of the new Land Registers, 1843 (Grundbucher), have received a common page in the "Grundbuch." What is separated from a closed piece of land takes the quality of what is known as a "walzendes" (moveable) piece of land not subject to the before-mentioned limitations respecting its severance, and if it does not by exchange become part of a number of parcels of land which are considered as closed lands. In this case, as also when separated lands or other moveable (walzend) lands become consolidated by an express declaration with closed lands, as lastly hereinbefore described, they become subject to the limitations as to severance. If on lands recently added to closed lands (Avulsen) or other moveable (walzend) lands, new sources of gain arise (through cultivation or otherwise), then, so far as the parcel (so added to the closed lands) together with the new sources of gain lastly hereinbefore referred to, are separately amenable to taxation—after a new regulation of taxes—they form a new set of closed lands, upon which on future severance the above-mentioned limitations are again applicable. The Government officials are, nevertheless, empowered in single instances to grant dispensations as to the severing of the lands otherwise then provided by law.

2. *Proceedings in Matters Relating to the Severing of Lands.*

The competent officials are:—

(1.) The officials of the Land and Mortgage Registry.

(2.) Amtshauptmannschaft.

(3.) Tax collectors of a district or the Town Council.

(4.) The Income Tax Assessment Committee of a County (Kreisstueramt) and the Ministry of Finance.

The official work is so regulated that the officials of the Land and Mortgage Registry (1) have first of all to see whether the applicants are legally qualified or entitled to dispose of their lands; then the Amtshauptmannschaft (2) has to examine in the public interest if the severing of lands is allowable; also to decide if such severing is to be allowed by way of dispensation; then the tax collectors of the district or the Town Council, and the latter body in towns with municipal law (3) has to distribute the taxes and redemption rents; the Amtshauptmannschaft (2) has to distribute the rest of the public taxes finally; the said officials in the Land and Mortgage Department (1) have to transcribe and to alter the title of the possessor in the Register. The Court for Appeals and the Court for further Appeals in cases of decisions as to whether the severing of lands if permissible or not are the Kreishauptmannschaft and the Home Office, in decisions as to the distribution of redemption rents, the Income Tax Assessment Committee (Kreissteurrat), and the Finance Ministry Result.

Result.

The endeavour of the State of Saxony by means of the legal provisions discussed in A., B., C., D. to further the development of agriculture, to bring about the release of the ground and soil from oppressive servitudes and duties, to make it possible or easier to carry out works and institutions advantageous to agriculture, and to prevent an uneconomical severing of peasant holdings has had a good result.

The peasant holdings in the kingdom of Saxony are at this time free of oppressive servitudes and duties (Erbpachts liabilities and Erbzins liabilities), and it has become impossible to burden anew the holdings of the peasant farmer with services, servitudes and duties subject to redemption, and to impose fresh Erbspachts and Erbzins liabilities. The compulsory provisions as to the division of lands, the consolidation of the same, and the alteration of watercourses, and the carrying out of drainage and irrigation works have had the effect of advancing the development of agriculture, and brought about a more advantageous course of husbandry of land in the possession of the peasant holders. The said provisions will also in the future advance the interests of this class in a most beneficial manner. The restrictions imposed on the division of land since the coming into force of this Act finally guarantees to the country a protection against the weakening and decay of a strong class of free peasant farmers indispensable for the welfare of a nation.

APPENDIX V.

Documents put in by the Right Hon. The Lord Ashtown.

A.—Summary Table showing Gross Rents, Arrears, and Salaries on the Woodlawn Estate.

	1906. Yearly Rents.	1906. Arrears.
	£ s. d.	£ s. d.
Twenty-seven Agricultural Tenants who live on their farms, ...	537 12 6	219 14 9
Thirty-five Agricultural Tenants who labour, ...	262 7 6	106 9 9
Fifteen Grazing Tenants (yearly and eleven months'), ...	1,330 15 0	309 5 0

APPENDIX VII.

DOCUMENTS put in by LIEUT.-COLONEL WM. HUTCHESON POË, in reply to Evidence given at Newry and Cookstown in May, 1907.

A.—NOTES OF EVIDENCE.

My attention having been called to the evidence given at Newry and at Cookstown, last month, before the Royal Commission on Congestion in Ireland in connection with a property belonging to my wife, situated near Cookstown, in the County Tyrone, I beg to be permitted to make a short statement, and to submit tabulated returns dealing with the points raised by Mr. John Doris (Q. 37916), and by the Rev. Canon Quinn, P.P. (Q. 35312-23),* wherein they refer to the generally uneconomic conditions of the holdings on this estate, and to the exorbitant terms which, as they allege, Mrs. Poë and myself are demanding for its purchase.

1. The general trend of Canon Quinn's evidence seemed directed towards showing that this estate consisted for the most part of holdings under £5 valuation, and of less than ten acres in area; that the occupants as a rule depended on sources of employment other than land for their livelihood and rent-earning capacity; and that under such circumstances a landlord was not entitled, when negotiating terms of purchase with his tenants, to look for such a price as would bring in his second term net rental.

2. The tabular returns, which I have appended, and which show in detail the area and valuation of all the holdings, will, I think, satisfy the Commissioners that Canon Quinn's evidence on these points is scarcely borne out by facts, while as regards his contention that the rent of these holdings is derived from money earned in Great Britain or America, I have no hesitation in saying that in ninety-nine cases out of 100, the rent is paid solely by the land.

Few, if any, members of the tenants' families, on this estate at any rate, go to England or Scotland for employment, finding quite sufficient work to any spare time they may have in labouring for larger farmers in the immediate neighbourhood of their own homes.

3. I think I am also entitled to point out that all the tenants on this estate have turbary—of an exceptionally good quality—on very favourable terms; those who have it in their own lands get it free, while the remainder are charged at the rate of 5*s.* the Irish rood.

These specially low prices were granted by Mrs. Poë's aunt, shortly before the former succeeded to the property, and she has never departed from them.

4. Canon Quinn is in error in stating that the estate is nine miles from the nearest railway station. This is true only of one townland—Broughderg—the remaining five townlands being from three to six miles only from Cookstown, one of the best market towns in the North.

5. That Canon Quinn has rather over-stated the case when he implies that the majority of the tenants live on what he describes as "bogland—miserable bogland" (Q. 35323), and that they have great difficulty in meeting their rent, will, I think be evident when I state that since Mrs. Poë's succession to the property, nearly twenty years ago,

1. There has not been a single eviction;
2. The arrears have decreased from £1,400 to less than £400;
3. In no single year has the agent failed to collect less than the current year's rent;
4. The costs of collection, including agency fees, legal expenses, &c., have not averaged more than 8 per cent. annually.

6. Lastly, with regard to Canon Quinn's contention that for second and third-class land, such as he implies this estate to be, eighteen years' purchase by the tenant, added to 20 per cent. bonus by the State, can be invested so as to give an owner the equivalent of his second term net rental—to which apparently Canon Quinn considers he is entitled—I fail to see how *under any circumstances* such a result could be obtained. I greatly doubt if such a proposition would be true, even in the case of heavily-mortgaged estates, subject to high rates of interest thereon, but I am quite certain that it would fall very wide of the mark, when dealing with an unencumbered property, free of charges of any kind, such as that belonging to Mrs. Poë.

As I have already stated, the costs of collection, &c., are well within the 10 per cent. margin allowed for "deductions" in the Land Conference Report, and the estate being in strict settlement, the proceeds of any sale must be invested in such securities as a reasonably prudent trustee would approve of.

Let me take Canon Quinn's proposition, and assume a second term gross rental of £100 a year.

18 years' purchase, payable by tenant, .	£1,800
20 per cent. bonus, payable by State, .	360
Total proceeds of sale, . . .	£2,160

This sum, invested at, say, 3½ per cent. (beyond which no prudent trustee would go), would yield £75 12*s.*, as against £90, which Mrs. Poë at present receives.

7. If account be taken of the costs involved in carrying through a sale—not desired by the owner, but solely made in the interests of the tenant and of the State—(such as proving title, compensating agent, &c., which it was never contemplated in the Land Conference recommendations that the owner should pay), twenty-four and a half years' purchase, *plus* the bonus of 12 per cent., are the lowest terms, which would give an owner the equivalent of his second term net rental, and I see no reason, when all the circumstances of this particular estate are taken into consideration, for asking less.

* See Appendix to the Seventh Report of the Commission [Cd. 3785, 1907], pp. 17 and 98.

B.—Sales of Tenants' Interests on Estates of Witness in Co. Tyrone, since 1st January, 1882.

APPENDIX IX.

DOCUMENTS put in by Mr. E. WHITE in connection with his Evidence before the Commission.

A.—LEAFLETS PUBLISHED BY THE IRISH GAME PROTECTION ASSOCIATION.

(*a.*)—OBJECTS OF THE IRISH GAME PROTECTION ASSOCIATION.

The objects of the Association are to secure, by the means enumerated below, the improvement of Irish Shootings in the interests of Sport, and for the prosperity of the country at large.

I. To secure the proper enforcement of the existing Game Laws and all regulations relating thereto by the Excise and Constabulary officials.

II. 1. To suppress the taking or killing of Game out of season.

2. To suppress dealing in Game out of season.

3. To suppress taking or killing of Game by unlicensed persons.

4. To suppress dealing in Game by unlicensed persons, including those selling Game, who do not hold the full £3 Game Licence Certificate.

5. To suppress Sunday Shooting.

III. To undertake private prosecutions for trespass, poaching, &c., in approved cases, for Members, who in such cases defray the costs.

The Association takes legislative action in Parliament and otherwise when such is required to secure improvements in the Game Laws or their administration; it also appoints and looks after inspectors in approved districts, and sends inspectors on temporary duty to any part of Ireland, and in numerous other ways seeks to carry out the above programme.

(*b.*)—COPY OF LETTER which appeared in "*The Field*," "*Land and Water*," and the leading English and Irish Daily and Sporting Journals, December 6th, 1902:—

THE PRESERVATION OF GAME IN IRELAND.

SIR,—Every sportsman must admit that game in Ireland becomes scarcer year by year, owing, in a great measure, to the number of guns steadily increasing. To such an extent is this the case that, without protection, game will ultimately become extinct in many parts of the country. To prevent this I would urge all sportsmen and those interested in the protection of game to join the Irish Game Protection Association, which is the only association that I am aware of likely to improve this state of things; for I frequently see reports in the daily papers of prosecutions and convictions obtained by this society which should call forth the admiration and support of sportsmen throughout Ireland.

It certainly surprises me to find in a country like this, where there are so many sportsmen, that more have not become members and contributed to its funds. Yet the work of this society is dependent mostly on subscriptions; consequently, with very limited means it does valuable work.

If the objects of this useful association were more generally known the number of subscribers, I do not doubt, would be considerably increased. These objects are:—

(1.) To prevent game being killed on Sundays.
(2.) To prevent game being killed out of season.
(3.) To prevent the illicit sale of game.

APPENDIX IX.

(4.) To assist the Excise in obtaining convictions against persons killing or dealing in game without licence, and to press the Government to direct the Constabulary to assist in enforcing the law in these respects.

(5.) To take such other steps for the preservation of game as may be deemed advisable.

The minimum subscription for admission of a member being only £1 per annum, brings it within the reach of all. To those landowners who cannot afford, or perhaps do not consider it necessary, to go to the expense of paying a permanent keeper to preserve their lands, I would recommend this association as being most useful. They would, at a moderate expense, be able to obtain the services of inspectors, whose occasional visits would have a deterrent effect on poachers in their neighbourhood. To others who own no property, but shoot over the broad acres of unpreserved land, of which there are many legitimate and fair sportsmen, I say they should hail an association of this kind with delight, and be amongst the foremost to join it. If more funds were at its command the association would endeavour to have the close season more rigidly enforced, and the number who now shoot without game licences considerably reduced, as well as stricter supervision kept over the game dealers.

In calling attention to these facts I hope that many will be induced to join and give their support to an association deserving of their sympathy, if only from a spirit of fair play.

Yours truly,

HENRY C. FITZHERBERT.

Abbeyleix, Queen's County.

(*c.*)—DEALING IN GAME.

No person may deal in game without having procured (i.) Licence granted by not less than two Justices of his division or district; (ii.) an Excise Licence.

No Excise Licence to deal in game will be granted except upon production of the Justices' Licence.

Penalty, £20 for dealing in game without Excise Licence. 1 and 2 Wm. IV., Cap. 32, Sec. 18; 23 and 24 Vic., Cap. 90, Sec. 14.

No licensed Game Dealer may buy or obtain any game from any person except another licensed Game Dealer, or person holding a game certificate.

Penalty, £10 and costs of conviction, whereupon the Licence becomes null and void. 1 and 2 Wm. IV., Cap., 32, Sec. 28. (Two Justices.)

Game Dealers to have the words "Licensed to deal in Game" legibly printed after his own name on his shop front.

Penalty for non-compliance, or for printing same without being licensed, £10 and loss of licence. 1 and 2 Wm. IV., Cap. 32, Secs. 18, 28.

No licensed Game Dealer shall buy or sell or knowingly have in his house, shop, stall, possession or control any bird of game after the expiration of ten days (one inclusive and the other exclusive) from the respective days in each year on which it shall become unlawful to kill or take such birds of game respectively.

Penalty, £1 per head of game. Costs of conviction and loss of license, which becomes null and void upon conviction.

1 and 2 Wm. IV., Cap. 32, Sec. 4. (Two Justices.)

(*d.*)—REGULATIONS prescribing the manner in which SPORTING RIGHTS vested in the LAND COMMISSION, pursuant to the provisions of SECTION 13 of the IRISH LAND ACT, 1903, are to be dealt with by the LAND COMMISSION.

By the Lord Lieutenant-General and General Governor of Ireland.

ABERDEEN.

WE, John Campbell, Earl of Aberdeen, Lord Lieutenant-General and General Governor of Ireland, hereby make the following Regulations under Section 13 (1) of the Irish Land Act, 1903:—

I. In these Regulations the expression "Sporting Rights" shall be taken to mean Sporting Rights subject to the provisions of the Ground Game Act, 1880, previously enjoyed by the vendor, exclusive of the tenant, which have been, or are proposed to be vested in the Irish Land Commission (hereinafter referred to as "the Commission"), pursuant to the provisions of Section 13 (1) of the Irish Land Act, 1903.

II. In all cases where Sporting Rights have been vested, or are proposed to be vested, in the Commission, pursuant to the above-mentioned Section the Commission shall inquire:—

(*a*) As to the nature and value of such rights.

(*b*) As to the probable expense necessary for the proper preservation, and for the improvement of such rights, and as to any method proposed therefor.

(*c*) When it is considered that such rights are of value, having regard to the probable expense of preservation and improvement, how such rights can be dealt with, preserved and improved.

III. Where it appears to the Commission, as the result of such inquiries, that these rights are in any particular case, of little or no value, or that the expenses of preservation would be out of proportion to the value of such rights, the Commission may permit such rights to be exercised by the tenant purchaser or occupier, free of charge.

IV. Where it appears to the Commission, as the result of such inquiries, that these rights are of value and should be preserved, the Commission may, in their discretion:—

(1) Advertise such rights as being to let or for sale.

(2) Sell or dispose of such rights in such manner, and for such consideration as they may think right.

(3) Make leases, or lettings, of such rights, either by the season, by the year, or for any term of years, to such persons and upon such terms as the Commission may determine.

(4) Issue licences to exercise such rights, or any of them, for any period to any person, and upon such terms as the Commission may determine.

(*a*) Any such lease or letting as aforesaid, and any such licence may provide (in addition to the payment to the Commission of a stipulated payment or rent) for a payment by the lessee or licensee to the proprietors or occupiers of the different holdings over which the rights are granted, such payment to be calculated upon the number of the game killed, or in such other way as may be determined upon by the Commission; the amount to be distributed amongst such proprietors or occupiers respectively, either in proportion to the game killed on each holding respectively or in proportion to the acreage of each holding, or in such other way, and to be calculated by such other person or persons as the Commission may from time to time determine.

(*b*) Every such lease or letting shall, unless it is specially agreed to the contrary, provide for the preservation of the game and fish by the lessee in such way and by such persons as the Commission may from time to time determine.

(*c*) Any such lease or letting may, where the Commission think it expedient, provide that the payment to be made to the said Commission for the first part of the term created by such lease or letting, shall be of a nominal amount or of a less amount than the amount of the rent to be ultimately payable to the Commission.

(*d*) Every such lease, letting, or licence shall provide that any person entering upon land in pursuance of any right thereby conferred shall be liable to make reasonable amends and satisfaction for any damage done or occasioned thereby.

(5) Take such steps and institute and carry on such actions or proceedings, either in Law or Equity, as the Commission may consider necessary for the preservation of the game or fish, the subject of such rights.

(6) Take such steps as may be, from time to time, determined upon, with the consent of the Lord Lieutenant, for re-stocking and improving such Sporting Rights in such ways as may be determined upon.

V. The net receipts derived from any Sporting Rights, after first deducting thereout all outgoings and expenses, shall be paid to the credit of an account to be opened in the books of the Irish Land Commission, to be entitled "The Improvement Fund No. 2."

VI. Any balance to the credit of the Improvement Fund No. 2 shall be available for any of the purposes in connection with Sporting Rights which may require expenditure, and subject thereto for the same purposes as those for which the Reserve Fund is now available in cases where the Commission may consider a free grant desirable.

VII. No expenses or liability shall be incurred by the Commission without the previous sanction of the Treasury for any of the purposes specified in clause IV. (5) and (6) of these Regulations unless the Commission are in a position to defray the necessary current expenditure of the funds to the credit of the Improvement Fund Account No. 2. APPENDIX IX.

Given at His Majesty's Castle of Dublin, this 20th day of March, 1907.

By His Excellency's Command,
J. B. DOUGHERTY.

(*e*) WILD BIRDS.

Irish Game Protection Association.

The police are authorised to institute proceedings against any person shooting, trapping, killing, or taking any Wild Bird during the Close Season, commencing generally on 1st March, contrary to the Wild Birds Protection Acts. The Irish Game Protection Association is prepared to prosecute for similar offences in the case of any of the Game Birds included in the Act.

110, Grafton-street, Dublin.

(*f*) BURNING.

The police are authorised to at once prosecute any person setting fire to any furze, heather, moss, or ferns, upon any mountain, moor, bog, or waste ground, after the 2nd day of February. Penalty, £5.

10 Wm. III., chap. 8, s. 7, as amended by 27 Geo. III., chap. 35, s. 3.

Private persons are also authorised to prosecute.

Irish Game Protection Association,
110, Grafton-street, Dublin.

B.—THE £ S. D. OF SPORTING RENTS.

The author of a recent work on the laws for the protection of game points out that, though formerly denounced as relics of barbarism and a means of oppression by landlords, they have now become a valuable source of revenue to the country. So they have, in a sense, for the sum paid in licenses to kill game amounted last year to £184,488. But this, though a means of public revenue, is not a source of individual *wealth*, nor can the sum paid to the public Exchequer for State permission to kill game be compared with the vast rent-roll now poured into the pockets of private owners and occupiers of land for the practical exercise of the same rights.

The fund so expended elsewhere than in Scotland is now of such magnitude that it deserves consideration, if only from the economic side. The effect of this increment of rent, first felt in the Highlands, where poor landowners were raised from penury to comfort, and then from comfort to wealth, by the demand for grouse moors, has now extended to the remotest counties of England, where at all points within reasonable distance of London or the larger towns prices for shooting and fishing are ever on the rise, though the quality of the sport, owing to the indifference of many occupiers and their ignorance of the profits which a little care would ensue, tend to become yearly rather worse than better.

The values of good English shooting and fishing often stand now at double and treble what they were even twenty years ago.

Really first-class English pheasant shootings are more valuable than grouse moors, as the following instances show: 2,500 acres of good mixed shooting, with no house, a railway within two miles, and a thoroughly good record of game killed for four seasons, let for eleven months, excluding January, the last month of the shooting season, for 850 guineas! The landlord paid all wages and "rearing expenses," while the tenant paid for the beaters. £150 would amply cover keepers' wages and hire of sitting hens for so small an area. So we may set the value of the sporting rights of this 2,500 acres at a clear £700 per annum. It is doubtful if the *net* profit to the owner from agricultural rent for this property amounted to £2,000 per annum. Hence his sporting rights represent more than one-third of his income from his land. The average bag of game was about 4,000 head. In Hampshire we find 50 guineas asked for the shooting of 800 acres for the month of September alone; and in Hertfordshire 1,500 acres of partridge shooting, for which £250 is wanted for the season. The bag expected is 250 to 300 head of partridges, 200 hares, and 600 rabbits. This price is the highest we have seen demanded for so small a bag; but as the ground is within easy reach of town it was probably obtained. The rental gives 3*s.* 4*d.* per acre.

There can be no better instance of the increment from this source to the occupiers of purely agricultural farms than the recent history of the rents for partridge shooting in North Norfolk. On many of the large estates of this district the sporting rights have always been reserved by the owners. But on a very large proportion the tenant farmers have the sporting rights in their own hands, and have so held them for the last fifteen years or more. The greater part of this land is famously well farmed, not the poor, sandy, heathy soil which one sees round Thetford, and what is called the "breck" land of Norfolk, much of which is hardly fit for anything else but game farming and rabbit warrens; though there is some of this at Sandringham. It is light chalky soil, which drains itself; and though near to the sea, the crops never seem to suffer from the sea-fogs. This land is divided into very large fields, with small weak fences between them, and very little artificial cover, except the strips of wood and plantations for partridges to nest in. The big bare fields are all farmed "high," with crops set like patterns, and great flocks of sheep, and turnip fields to feed them. *Nothing whatever is conceded to the needs of game.* Not a thistle patch, or a rough uncleaned ditch, or a late crop of thin barley is to be seen to hold birds late or give them nesting-places early. High farming no drawback.

The land is, in fact, farmed on thorough "business" principles; all the rabbits are killed off and a large percentage of the hares, and yet the shooting rents are simply enormous, because this district is, for some cause not clearly understood, the *second best* natural partridge ground in England. The best is on the Norfolk "breck" lands; but the country from Wolverton (the station for Sandringham) past Docking, Heacham, Stanhoe, Holkham, and on to Cromer, swarms with partridges; and as all of it has the same natural advantages, except that that which fringes the reclaimed marshes of the coast is perhaps the best, the demand for shootings there is keen. Now these stocks of partridges do not cost the tenant farmer one single penny, either to rear or to protect. The men on his farm give an eye to the nests, and fortunately shooting has so long been recognised as a valuable asset in that part of the country that no one ventures an inch across the border when shooting neighbouring land, and egg-stealing is reported and punished promptly, as it ought to be. There are no rabbits left, and the Ground Game Act enables the tenant to keep the Cost—not one single penny.

APPENDIX IX.

stock of hares as low as he likes. Consequently, in letting this shooting, he lets only partridge shooting; and to maintain this, as we have said, costs him nothing.

Before seeing exactly what it brings him in now, we may go back fifteen years, when farming was at its worst, after a period of great prosperity. If he did not hold the right of sporting then, he probably received it gratis, or plus a big reduction of rent about that time. This was fair enough, for times were shocking, and the landlord was often only too glad to part with sporting rights in place of cash. Rents then went lower still, and on these big farms of from 500 to 1,200 acres the new tenants generally entered naturally into the sporting right. It was not, in fact, attempted to be withheld; times were still too bad. Neither did the tenants, though anxious to make all the money they could, set any high monetary value on this right. A very few years ago hardly one of these farmers let his shooting. They kept it to amuse themselves and their friends. Then one or two set the example of letting; and the prices made, followed by the steady increase in the demand for shooting, and the subsequent rise of its letting value per acre, have made this practice almost universal.

The farmers did not know how much they were losing.

There is no doubt that the prices paid for this North Norfolk shooting are too high, even in the face of the demand for it. One farm of 1,000 acres, with no wood on it at all, purely partridge shooting, let for £110. The farm itself is rented at only £540 per annum, so *for his sporting right the occupier netted a little over one-fifth of the rent he was paying.* Three years ago he did not let it at all, and fifteen years ago he might perhaps have made £30 or £40 for his shooting, a rent which would have entitled the shooting tenant to keep up enough rabbits to do £10 worth of damage at least. This "unearned increment" represents to such a tenant a reduction on his rent of twenty per cent., a very welcome and real addition to the value of landed property.

20 per cent. off his rent.

Quite recently on land in Norfolk rented by the agricultural tenants at 6*s.* per acre, the sporting rights were at once sublet at 2*s.* per acre.

Generally speaking, it is cheaper to rent English shooting from the landlord than from the tenant. The former does not drive such a hard bargain. On the other hand, in this case the area is often much larger than that which can be hired from tenants, and it commonly happens that a large house has to be taken as well.

It is the common experience of land agents that the shooting lets the house. Consequently it is usually reserved for the owner in making leases with tenant farmers.

High rents for Partridge shootings

The valuation of sporting rights in this case is somewhat difficult, because the rent of the house has to be deducted from that of manor and shooting. Often, however, there is an offer to let them separately. Whether these high rents for mere partridge shooting will be maintained is doubtful. The logical course would be for them to continue rising, as the rents of grouse moors have gone on rising. *Grouse moors now fetch on the average* £1 *per brace* of grouse killed in *good* seasons. On the small 1,000-acre shooting above mentioned 300 brace of partridges were killed in one season—at a cost in rent of £110. This is something over 7*s.* per brace, which is unsatisfactory enough when one remembers that last season partridges only averaged 2*s.* per brace to sell through the season. But the bag is a large one, much larger for the area than on most grouse moors. It would be an exceptionally good Scotch moor that would yield anything approaching an average of 300 brace to each 1,000 acres. So comparing these bags, and taking the rise in value from shooting as the standard, there would seem to be room for a rise in the rents of partridge manors in England.

"Continue rising"

Partridge and grouse natural products.

It may be objected that as the partridge is to the English fields what the grouse is to the moors of Scotland, the mainstay of highly rented natural sport, the pheasant being an artificial product in both countries, the partridge ought to be capable of making as rapid increase as the grouse have under care and preservation, if English sporting rights are to maintain their rise in value. It is not contended here either that the partridge will increase as grouse have, or that the prices of partridge shooting will reach the fancy price of grouse shooting, though it is *not impossible that they will approximate*, possibly by a lowering of the value of grouse moors, while that of partridge manors rises. But the *partridge on land now neglected will increase enormously.* The writer has known 400 birds killed on 600 acres, where previous to ordinary care being taken not 100 were shot in the season.

If the shooting rights of ordinary English land are a potential silver mine with an increasing yield, a decent trout stream or salmon river is a very Pactolus; it simply flows with gold! The quantity of such fishing, especially of good trout fishing, within reach of London is so limited, and the demand by wealthy fishermen so great, that no limit to the prices asked is yet in sight. £300 was asked this season for 1½ mile on a trout stream in Kent, near to London. I believe there are reaches of the Test and Itchen which let for five shillings a fathom, and that before long a mile of Hampshire trout-stream, without an acre of land except the right to fish from the banks, will be a fair younger son's provision. The price of the short length of the Itchen opposite the Hospital of St. Cross is always quoted as an index to the market value of Hampshire fishing. Even small and distant streams in the South fetch fancy rents. Thus for a fishing on the River Lambourne, above Newbury, yielding 175 trout in sixteen days' fishing—which, it must be admitted, is very pretty sport—eighty guineas are asked for from May 15 to the end of August. This, though only trout fishing, is reasonable enough, compared with the prices asked for by no means first-rate salmon streams. For *nine hundred yards* of the Tweed £80 is required; for two and a half miles on the same river, £300. On the Eden, for nine or ten casts, with a prospect of thirty fish if the water is in good order, £90, or (say) £3 per fish!

The instances given above are evidence both of the actual and possible money value accruing from the letting of sporting rights in England. But apart from any fancy rise in these values from the increase of demand and the limited supply, a very large increment could be obtained by the exercise of a little good sense and intelligence on the part of occupiers and owners in districts where, as the phrase goes, there is "no preserving." This phrase has not the negative significance which its form indicates. "No preserving" means, in nine cases out of ten, entire neglect of any precautions whatever to maintain a stock of game—not of artificially reared pheasants, but the game native and natural to the soil—the partridge, the hare, and the rabbit, especially the partridge. It is a form of that laziness and narrowness which has made the ordinary English agricultural tenant the most helpless, unprogressive, "stick-in-the-mud" class engaged in any commercial industry in this country. They are now well awake to the fact that they can get good money for their shooting. But while always ready to raise the rent on their shooting tenants, they rarely, very rarely, take any trouble to raise the head of game by according the ordinary means of protection so easily given by the occupiers. If they would only give directions to their farm hands to take care of the nests, and pay a small reward for those that hatch off, discourage dogs running loose on their land in the nesting and hatching time, and make their labourers report any cases of netting or wiring hares, they would raise the stock to double or treble its present number. In many parishes farm adjoins farm for miles, on which the occupiers do not expend as many shillings in protecting the valuable asset of game as they do in growing a crop of geraniums and pansies for their flower beds. Over these large areas the shooting is almost worthless. Shooting tenants now require to see the previous year's results; and no sensible man would even rent it, for if he came down after the first week in the season he would scarcely get a shot.

A little combination, a little less of the lazy belief that "game comes of itself," and this kind of ground would be worth 2*s.* per acre, instead of at the outside sixpence or sevenpence. We knew an instance in which one of these neglected areas was gradually secured by one enterprising sportsman, who by taking the shooting of different farms, and adding to his area from year to year, secured, mostly by lease, sixteen hundred acres, for which he paid an average of sixpence per acre. It was very fair partridge ground; but when he secured it there was scarcely a bird or

a hare to be seen after the first few days' shooting. None of the occupiers gave a thought to the game, and *preferred sixpence per acre with no trouble to 2s. per acre at the cost of a little vigilance.* So they let their labourers take what eggs there were, to sell or make puddings of; and any villager who took the trouble could wire the hares, and often sold them back to the owners. Oddly enough, this was near London. The new shooting tenant, with the services of one elderly keeper, has made a good partridge manor of this ground. It has swarmed with birds for the last three seasons, has been regularly shot by four guns, and could be let to-morrow for £140; and all the men's wages amount to £40. But this leaves a difference of £60 between the present value and that which it formerly fetched.

Where numbers of small holdings adjoin, the value of the sporting rights usually lapses entirely. The occupiers are always pottering about their fields, they all keep dogs, and few partridges ever bring off a brood. This is ridiculous and wasteful. The birds sit so close that unless the eggs are actually taken they seldom desert, and the small tenant, being constantly present on his land, could easily see that the nests are not disturbed. His small patchy crops are capital cover, and if he can get £3 for his sixty acres of shooting it means a good deal to him. But as it is, he prefers the company of his terrier, even to his possible £3 or £4, and the dog disturbs in his daily visits every partridge's nest on the holding. All the adjacent holdings are "messed about" in the same way, and the sporting value is nothing. They manage these things better in Germany. In Mecklenburg-Schwerin there are numbers of parishes in which the whole area is broken up into small holdings. The owners combine to protect the partridges and hares, shut up their dogs in the nesting time, and the official who corresponds to our chairman of the Parish Council lets the whole to the highest bidder, and *uses the money to pay the rates*!

It is well known that in Scotland there was a very large proportionate increase in the return of game killed when preserving grouse became universal. Whole ranges of moorland formerly neglected were protected, the grouse being looked after in the nesting season and arrangements made to prevent *wasteful heather burning, which injured the stock of grouse.* When there were *no* neglected areas, all the adjacent ground became better stocked, and gave far less trouble. As English agricultural holdings are very small in comparison with Scotch moors, this extension of preserving is difficult to maintain. But if small occupiers will combine they will find the same good results accruing, and higher rents paid in proportion to the rise in quality of the sporting. Passing from small holdings and their depreciated sporting value, to large ones, where intelligence and industry supplant indolence and stupidity, the following case may be of interest:—

APPENDIX IX.

An example.

Some years ago a private company was formed to take advantage of the very low rents of agricultural land on the western line in Wiltshire, Salisbury Plain, and adjacent counties. This company is now almost the largest farming concern in England. It secured great tracts of land, sometimes as low as 2*s.* 6*d.* per acre. Much was held on long leases at 4*s.* and 3*s.* 6*d.* per acre. For the company the good farmhouses attached to the dozens of farms held by them were no use. All they needed were the bailiffs' and labourers' cottages. Being ahead of the times in more ways than one, they insisted that their managers should make it part of the labourers' duty to give an eye to the game, especially the partridges, and look upon this as one of the regular assets of the farm, just as much as the poultry. There was soon a good head of game, and, as much of the land was contiguous, the company's game preserves helped each other, according to the obvious and (in Scotland) well-recognised rule, that the more general and widespread the care of game the more satisfactory the results over that area. *The company then let all their shooting at high prices, and let all the old farmhouses for shooting-boxes.* These houses were included in their leases of the farms, and as the "company" could not live in twenty houses the profit made on them was wholly to the good. The result was that the rent of thousands of acres, held on long leases, of this very low-rented land was paid for by the shooting rents and the rent of the farmhouses as shooting-boxes. The latter depends on the existence of the former, for no one would take these houses, often far from a station and in out-of-the-way places, unless they were headquarters for sport. Here, then, is a very striking instance of the economic part played by "sporting rights" properly used.

of the economic part played by "sporting rights."

Where possible, in all English shootings it is far preferable, after the first year, to obtain a lease for a term of years following. The times make it likely that the price of shootings will rise, so there is little chance of a loss; while the tenant has some chance of recouping himself for "unexhausted improvements."

C.—DRAFT OF DEED OF CONVEYANCE OF SPORTING RIGHTS.

THIS INDENTURE Made the day of
BETWEEN
(hereinafter called the Grantors) of the ONE PART and of (hereinafter called the Trustees) of the OTHER PART.

WHEREAS the Grantors have purchased their holdings in the First Schedule hereunder written with all the Game Sporting and Fishing Rights therein respectively. AND WHEREAS for the better protection and development and economical management and disposal of the said rights and to provide for the letting and the division of the proceeds of the Letting of such rights amongst the said Grantors in the proportions in the Second Schedule hereto set out it has been agreed amongst them that the said Game and Game Sporting and Fishing Rights should be granted to the said Trustees upon the Trusts for the purposes and with the powers hereinafter declared.

NOW THIS INDENTURE WITNESSETH that in pursuance of the said agreement the said Grantors do and each of them being doth grant and convey to the said Trustees the sole and exclusive right of shooting hunting coursing fishing fowling and sporting over and taking all and all manner of Game wood-cocks snipes quails landrails hares rabbits wild fowl and fish and of trapping vermin upon and from the lands and hereditaments now respectively in our occupation and described in the First Schedule hereto with power to enter upon all the said premises for the purposes aforesaid and for preserving the Game wild fowl or fish thereon. TO HOLD the same unto and to the use of the said Trustees their heirs and assigns upon the trusts following.

1. The Trustees shall have the sole and exclusive power of managing and regulating the game and sporting rights on or over the hereditaments comprised in the Schedule hereunder written and for that purpose may employ and remunerate Gamekeepers and Watchers and may make special allowances to and arrangements with the Grantors or any one or more of them should special circumstances so require (and of this the Trustees shall be the sole judges) and may make arrangements and contracts with owners or tenants of neighbouring lands in respect of the game and wild fowl hares and rabbits thereon or in respect of game coverts thereon and in respect of the fish in the rivers lakes and streams thereof and may do all such things and may out of the rents and profits of the sporting rights expend such moneys as may to them seem expedient or necessary for the due management and development of said rights and for enhancing the value thereof in the interests of the said Grantors.

2. The Trustees may at their sole and uncontrolled discretion let by Lease for any period not exceeding five years ALL or ANY of the rights hereby granted to them.

3. The lettings shall be made at the best rents that can be obtained.

4. The Leases shall contain covenants (*inter alia*): (*a*) to pay the rent (*b*) to exercise the rights and privileges thereby demised in a reasonable and sportsmanlike manner (*c*) not to assign or underlet without the previous consent in writing of the said Trustees

APPENDIX IX

(*d*) that such other provisions as in the opinion of the Trustees may be necessary for carrying into effect the purposes of this deed including power to determine lettings pursuant to the provisoes contained in paragraph 7 hereof.

5. The Trustees shall apply the rents first in the discharge of the expenses of preserving the said lands and waters thereon and neighbouring lands and waters and if they see fit of rearing game thereon and of maintaining and letting the game and fish and shall divide the residue after deducting 5 per cent. as hereinafter provided amongst the Grantors in the shares and proportions set forth in the Second Schedule hereunder written.

6. If in any season the Trustees shall fail to let the game and other rights hereby granted for the season or for a term of years they shall nevertheless utilise the same to the best advantage of the Grantors either by issuing temporary licenses for fishing or shooting at such prices as can be obtained for same or by employing persons for reward to take and kill the game and fish for purposes of sale, and the proceeds from such licenses or such sales shall after payment of expenses be distributed amongst the Grantors in the proportions in said Second Schedule set forth.

7. The Grantors may at any time after the expiration of ten years from the date hereof, but no sooner, determine the trusts of this deed and discharge the Trustees from acting thereunder but without prejudice to any contracts or leases then existing. Such determination and discharge shall be by resolution duly proposed and carried by the votes of the majority of the Grantors present at a meeting thereof, notice of the time and place of holding same and of the resolution to be proposed thereat, shall have been duly given to each of the Grantors by leaving same at his place of abode seven clear days before the date appointed for the holding of said meeting. The said meeting shall be held only upon the requisition of one or more of the said Grantors who shall personally sign the said notice and the quorum for such meeting shall be Grantors personally present not being less than————in number. The members present shall choose one of their number to be Chairman and in the case of an equality of votes the Chairman shall have a casting vote in addition to the vote to which he is entitled as a member.

8. The Trustees shall in each year receive as their remuneration for acting in the trusts hereof a sum of 5 per cent. on the net income derived in each year from the lettings licenses or sales aforesaid and once in every year the accounts of the Trustees shall be examined, and the Grantors may by the votes of the majority of them appoint any fit and proper person annually to audit such accounts and the auditor shall be supplied with a copy of the balance-sheet and it shall be his duty to examine the same with the accounts and vouchers relating thereto and to report to the Grantors thereon, and the Trustees shall not be required to furnish any other account than that to be so submitted annually to audit as aforesaid.

9. There shall not be less than two Trustees hereof and if any Trustee shall at any time be desirous of withdrawing or being discharged from the trusts hereof it shall be lawful for him to do so by notice in writing under his hand given to the said Grantors and the Trustee giving the same shall thereupon cease to be a Trustee to all intents and purposes.

10. The power of appointing a new Trustee or n Trustees of these presents shall be vested in the sa Grantors and the appointment shall be made by votes of the majority of the said Grantors subject far as they are applicable to the provision of s tion 7 hereof.

11A. The term "Grantors" shall include all p sons for the time being registered as owners of t respective holdings in the Schedule hereunder writt and if, at any time, there shall be more than o such registered owner of any such holding then f all purposes of this deed they shall be deemed to co stitute but one registered owner thereof and sha have in respect of the occupation of the said lan and rights and powers under this deed of the origin Grantor only and in case of dispute between su registered owners of such holding the Trustees sha have the sole power to nominate one of them to e ercise on their behalf such rights and powers aforesaid.

11B. The term "Trustees" shall include the Tru tees or Trustee for the time being of these present

12. The Grantors hereby do and each for himsel his heirs and assigns doth hereby covenant with th Trustees that they and each of them and their respe tive heirs and assigns will not at any time hereafte interfere with or disturb the Trustees their lessees o licencees in the exercise of their rights under thi deed in preserving and maintaining all game, wil fowl, hares, rabbits and fish, and of beating shoot ing, fishing, fowling, in over and upon said lands rivers, lakes, and streams or permit or suffer an other person or persons to trespass upon their sai respective lands, rivers, lakes or streams in pursui of game, wild fowl, hares, rabbits or fish or other wise interfere with or disturb the Trustees thei lessees or licencees in the exercise of such rights a aforesaid and will, if necessary, join or permit thei name to be used in any legal proceedings which th Trustees may consider requisite to give effect to th trusts and purposes of this deed. AND THAT in case of any breach of this covenant by any Grantor or Grantors (whereof it is hereby agreed that th Trustees shall be the sole judges) the Trustees shall be at liberty to withhold from such Grantor or Grantors his or their annual proportion of rent or income to which he or they would be otherwise entitled under the provisions of these presents or such part thereof respectively as the Trustees in their sole discretion shall think fit and any Trustee or Trustees so entitled shall be divided amongst the other Grantors in such proportions as the Trustees shall determine PROVIDED ALWAYS that nothing in the last preceding clause contained shall interfere with or prejudice any other remedy at law or in equity which the Trustees may be entitled to in respect of any such breach of covenant as aforesaid.

SCHEDULE.

Name of Grantor.	Proportion to be paid to him

D.—MEMORANDUM FOR DISTRIBUTION AMONG TENANT PURCHASERS WHO HAVE ACQUIRED THE SPORTING RIGHTS ON THEIR FARMS.

Have you considered what you will do with your Game rights?

There is money in these rights which you can realise if you will.

You may say that the Sporting Rights over your own holding are not worth much.

True: but the Sporting Rights over the whole property, of which your farm is a part, are either valuable now, or with a little care may become valuable, and you and your co-owners may share that value.

Farmers in England, Scotland and Wales often make handsome returns from letting the Game Rights on their holdings—Why should not you do the same?

There is a desire all over Ireland to utilise our national resources—they have indeed been too long neglected.

Do you sympathise with this desire?

The climate and soil of Ireland are as well adapted for the production of game as the climate and soil of any part of the Kingdom, and a little care and attention on the part of our landowners will easily make our game a most valuable national asset.

To produce this result a hearty co-operation with your neighbours is necessary: the cultivation and protection of game must be undertaken on a large scale so that all may reap the benefit.

armers elsewhere make substantial profits from
system of co-operative game preservation: if you
your co-purchasers don't reap equal benefits the
t will lie at your own doors. And the effort will
you nothing—either in money or labour. Or-
ation alone is necessary. It is suggested that
agree to vest your Game Rights to Trustees, to
elected and appointed by yourself, who will
lertake on an Agreement the letting of your Game
l the distribution of the proceeds of the letting in
ain proportions, to be agreed upon between your-
and your co-owners.
ll information as to how this can be done and a
n of deed to carry out the scheme will be supplied
you free of charge upon application either to the Estates Commissioners, 25, UPPER MERRION-STREET, DUBLIN; the Congested Districts Board, 23, RUTLAND-SQUARE, DUBLIN; or the Irish Game Protection Association, 110, GRAFTON-STREET, DUBLIN, all of which bodies are most anxious that you should reap every benefit which your new position as an owner of land entitles you to enjoy. But you must act *at once*, and get your neighbours to join with you: *no time is to be lost*: every day during which your lands and theirs are free to trespassers and poachers is a loss to you and them without any compensating advantage. The trespasser and the poacher won't put any money into your pocket—the honest sportsman will: he will pay his way, and you must choose, and choose quickly, between him and them.

E.—EXTRACT FROM THE SIXTEENTH ANNUAL REPORT OF THE ASSOCIATION.

n presenting the Sixteenth Annual Report and tement of Accounts the Executive Committee of Association have much satisfaction in being able show a substantially increased income and mem-hip, with a corresponding amount of solid useful k accomplished. They are gratified that their licy and efforts during former years have so com-nded the Association to the approval of sports-n, that in several counties which heretofore gave support, there are now well organised branches, rticipating in the advantages of regular inspec-n, and the general assistance in game preservation t the Association affords. The further ex-sion of the influence of the Association's opera-ns into some counties (still apathetic) in the th-east and South-west of Ireland during the ing season is greatly desired, and your Com-tee appeals to owners of shootings and sportsmen these counties to guarantee the necessary support order to secure local inspectors, and otherwise re in the beneficial results of working in co-opera-n.

Eleven meetings were held by your Committee ring the year which were well attended, and be-s these, thanks are due to several Dublin mem-s of your Committee for frequent consultations, l who privately rendered much assistance from e to time.

n this connection your Committee specially desire record its sense of the obligations due by the sociation to Mr. John R. Patchell, K.C., and Mr. ward White, who continue to ungrudgingly and h increasing frequency place their exceptional owledge and experience of the Game Laws of Ire-d at its disposal.

The Association has suffered loss by the death of eral subscribers during the year now past, and it with much regret your Committee deplores the oval (amongst others) of the following supporters many years:—Professor G. F. Savage-Armstrong, D.; Messrs. Guy Lloyd, J. H. Payne, and Major-neral White.

The tabulated summary of prosecutions, to which rticular attention is directed, affords evidence of s branch of the Association's work being vigorously intained. In all some 120 cases were reported to ir Committee for consideration, out of which 91 secutions were instituted, the majority resulting convictions and substantial fines, while the few missals recorded are again accounted for by the n sympathy with offenders displayed by some gistrates in certain districts.

The increased funds enabled your Committee to ploy a larger number of inspectors and watchers an has been found possible in previous years. Most the new appointments proved successful, though re have been a few exceptions. Even in places ere the inspectors did not secure cases for prosecu-ns, most encouraging reports have been received m members of the good preventive effect of the pector's presence in the district, and the marked provement in conditions in the areas allotted to em.

The Association's inspectors visited the following ms during the past season for the purpose of deal-g with cases of illicit dealing in game, and in some s made important detections, while in others their esence proved a wholesome check on this traffic, as well as enabling them to secure convictions for breaches of the Game Laws in the neighbourhood of several of these towns:—

Abbeyleix, Arklow, Athenry, Athy, Ballinasloe, Ballinrobe, Ballyshannon, Banagher, Belturbet, Birr, Boyle, Bray, Bundoran, Cavan, Castlebar, Charleville, Clara, Clonmel, Collooney, Cootehill, Dromahaire, Dungannon, Edgeworthstown, Enniscorthy, Galway, Kildare, Killaloe, Letterkenny, Limerick, Longford, Manorhamilton, Maryborough, Maynooth, Mountmellick, Mullingar, Newcastle West, Newtownstewart, Omagh, Pettigo, Rathdowney, Rathkeale, Sligo, Strabane, Stranorlar, Tuam, Tullamore, Westport, Wicklow.

In three instances suspected packages, which the inspectors were satisfied contained considerable quantities of game and wild birds, were followed by them to their destinations. Two of the offences have been reported to the Inland Revenue, whose action is awaited, and in the other case your Association prosecuted and secured a conviction. Your Committee attach the highest importance to every effort to stop this outlet for poached game, and regret that certain game salesmen in Dublin and London, whose reputation should be above suspicion, constantly accept and sell game from unlicensed dealers.

Owing in a great measure to the efforts of the Association the Inland Revenue are deriving nearly £23,000 yearly from game and gun licences in Ireland, and your Committee protest in the strongest manner against this money going out of the country, while such a very small proportion of it is applied to the prevention of the extermination of game in this country. The Department is most tardy in instituting prosecutions in breaches of the Excise Game Laws reported to them by your Association, although only carefully authenticated cases are sent forward, in which reliable witnesses are willing and available, and in very many cases your Association has previously shown the absolute proof of the offence by successful prosecution on other charges.

Before the opening of the shooting season your Committee had the question of the need of the protection of game on estates vested in the Land Commission (referred to in last Report), raised in the House of Lords by Lord Massy, who kindly brought the matter forward. The reply of Lord Denman, on behalf of the Government, to the effect that there are many more pressing subjects to be dealt wtih in the administration of the Land Purchase Act than the preservation of game, must be considered very unsatisfactory, as it indirectly infers that the Treasury continues to withhold the necessary funds from the Department to enable them to take steps for the preservation and letting of the sporting rights they hold, and the Committee consider it lamentable that the value of such an important national asset should be disregarded by the responsible authorities.

Your Committee are also indebted to Mr. Fethersonhaugh, M.P., for putting questions in the House of Commons relating to the enforcement of the Game Laws, and the laxity of the Inland Revenue concerning game licences.

The spirit of combination to preserve game amongst tenant purchasers, referred to in last year's Report, continues, it is pleasant to be able to state, in some districts, and several bodies of farmers have now formed game protection societies of their own, to

APPENDIX IX.

whom the Association gives every possible assistance and encouragement. Your Committee's help and advice was also constantly applied for by coursing clubs throughout the country, and freely responded to, several prosecutions in their interest having been undertaken.

It is becoming increasingly manifest that the professional poacher, usually drawn from town and village idlers, is receiving less tolerance every year from holders of land, and that the recognition of the worth and possibilities of sporting rights as a definite asset are obtaining greater attention. Your Association endeavours to give the widest disseminaton of a knowledge of the Game Statutes and the penalties attaching, from which there is slowly but nevertheless surely, the production of good results.

Under the provision of the Hares Preservation Act, the close season for hares has been extended in twenty-two counties, and now runs in most of them from 1st March to 20th September. The varying of the dates and lengthening of the close seasons is welcomed by your Committee, who believe it will prove of much benefit, and they trust sportsmen in the remaining ten counties, viz., Antrim, Donegal, Dublin, Fermanagh, Galway, Mayo, Meath, Queen's County, Roscommon and Tyrone, will bring pressure on their Grand Juries to present the application to the Lord Lieutenant, required by statute, for the necessary Orders varying the dates, and thus bring about a practically uniform close season for the entire country.

Your Committee are of opinion, and suggest to members, that woodcock should not be shot in the month of February, as at that period of the year they have in most places begun to "pair." It is hoped, therefore, that members of the Association will use their influence to dissuade others from shooting woodcock after January 31st.

Your Committee take this opportunity of tendering their thanks to the daily and sporting Press of Ireland and England for the very valuable support which they have given the work of the Association during the past year. To the Irish daily Press special thanks are due for the good effects produced by their regulation of the reports of the Association's prosecutions.

In conclusion, your Committee submits that their work is entitled to continued and increased support, and again urges upon all members the importance of recommending the Association to their friends, and bringing in new subscribers. They desire to draw attention to the fact that the expenditure of the past year exceeded the entire income, and that they cannot afford to further encroach on the balance shown in the account, which now represents all the reserve fund they possess.

Signed on behalf of the Executive Committee.

MASSY, *Chairman.*

B. J. NEWCOMBE, *Secretary.*

APPENDIX X.

APPENDIX X.

STATISTICAL ABSTRACT COUNTY GALWAY.

A.—PREFATORY NOTE.

Special statistics relating to County Galway have been prepared for the Commission by the Commissioner of Valuation (see pp. 305–9), the Registrar-General (see pp. 310–34), and the Department of Agriculture and Technical Instruction (see pp. 335–44), and certain returns have been furnished at the request of the Commission by the Local Government Board, the Congested Districts Board, and the Department of Agriculture and Technical Instruction. Other information about County Galway is available in different publications, *e.g.*, the Census Returns, the Annual Agricultural Statistics, the Annual Reports of the Irish Land Commission, the Estates Commissioners, the Congested Districts Board, &c.

All this statistical information has been brought together in the following pages, added to, and collated; and explanatory notes have been added where required (*e.g.*, pp. 305, 310, 350, 366, and 375), with a view of forming a compact Statistical Abstract of the chief points of interest in County Galway which may prove of assistance to the Commissioners during their sittings in County Galway, and subsequently be helpful to readers of the evidence.

WALTER CALLAN,

10*th September*, 1907. *Secretary.*

B.—GENERAL STATISTICAL INFORMATION TAKEN FROM THE CENSUS REPORT, 1901, COUNTY GALWAY BOOK [Cd. 1059–IV., 1902. pp. vii. and viii.].

The (Administrative) County of Galway covers an area 1,519,699 statute acres, or 7·3 per cent. of the total area of the country.

The number of persons in the County of Galway according to the Census was—in 1881, 238,078; in 1891, 211,227; and according to the recent Census, 192,549 (97,923 Males and 94,626 Females), or 8·8 per cent. less than in 1891.

The number of distinct Families in the County at the time of the late enumeration was 36,762, the average number of persons in a family being thus 5·1; and the number of Inhabited Houses was 36,219, showing an average of 5·2 persons to each house. In calculating these averages, the Special Inmates of Public Institutions have been omitted.

The following Statement shows, by County Districts, as constituted under the Local Government (Ireland) Act, 1898, the number of persons in 1891 and 1901; and the increase or decrease during the decade:—

County Districts.	Population.		Increase or Decrease between 1891 and 1901.		
	1891.	1901.	Increase.	Decrease.	Rate per cent.
Ballinasloe Urban,	4,642	4,904	262	.	5·6
Galway Urban,	13,800	13,426	.	374	2·7
Ballinasloe No. 1 Rural,	11,921	10,694	.	1,227	10·3
Clifden Rural,	20,569	18,768	.	1,801	8·8
Galway Rural,	24,915	23,039	.	1,876	7·5
Glennamaddy Rural,	18,486	16,577	.	1,909	10·3
Gort Rural,	14,201	12,286	.	1,915	13·5
Loughrea Rural,	22,244	20,126	.	2,118	9·5
Mountbellew Rural,	16,476	15,019	.	1,457	8·8
Oughterard Rural,	18,979	17,732	.	1,247	6·6
Portumna Rural,	10,363	9,054	.	1,309	12·6
Tuam Rural,	34,631	30,924	.	3,707	10·7
Total,	211,227	192,549	.	18,678	8·8

From the foregoing Statement it will be observed that there was an increase of 262 persons in Ballinasloe Urban, and a decrease in each of the other County Districts. The highest percentage of decrease took place in Gort Rural and Portumna Rural, viz., 13·5 and 12·6 respectively; and the lowest in Galway Urban and Oughterard Rural, viz., 2·7 and 6·6 respectively.

Towns having, in 1901, a population of 2,000 and upwards are classified as Civic Areas.

The County contains four such Areas, viz.:—Ballinasloe, Galway, Loughrea, and Tuam. In 1891 the population of these Areas amounted to 24,269; in 1901 it was 23,783, showing a decrease of 486 persons or 2·0 per cent.; in the rural portions of the County the decrease was 9·7 per cent.

The following Statement shows the Educational status of the Inhabitants of the County of Galway in 1891 and 1901, in so far as relates to the degrees of elementary education relative to which inquiry was made on the Census Forms, the numbers on which the per-centages are based being those for the County as constituted in the respective years :—

Degrees of Elementary Education.	Rate per cent. of Total Population	
	1891.	1901.
Read and Write, ...	50·7	61·3
Read only, ...	8·5	5·6
Illiterate, ...	40·8	33·1
Total, ...	100·0	100·0

From the above it will be seen that whereas, according to the Returns of 1891, only 50·7 per cent. of the inhabitants, at all ages, could "read and write," in 1901, 61·3 per cent. could do so; that the per-centage of the population who could "read only" in 1891 was 8·5, and in 1901, 5·6; and that the per-centage of the illiterate" fell from 40·8 in 1891 to 33·1 in 1901.

In 1891 33·9 per cent. of the inhabitants aged five years and upwards were illiterate (32·3 per cent. of the males, and 35·6 of the females); in 1901 the per-centage was but 25·4 (24·7 of the males and, 26·1 of the females).

The number of children attending school in the County of Galway, according to the Census of 1891 (week ending 30th May), was 30,803, or 38·0 per cent. of the persons aged 5 years and under 20 in the County as then constituted; in 1901 the number returned (for week ending 11th May), was 28,678, or 43·1 per cent. of the persons aged 5 and under 20.

In 1891 the number of persons in the County of Galway (as then constituted) returned as sick on the night of the Census, was 1,324, or one in every 162 of the population; in 1901 the number so returned was 1,305, or one in every 148 of the population; of the latter number 708 were at their own homes, and 597 were in hospital.

The number of persons returned in 1891 as receiving relief under the Poor Law System was 4,131, or one in every 52 of the population; of this number 1,627 were inmates of Workhouses, and 2,504 were in receipt of outdoor relief; in 1901 the number returned was 3,853, or one in every 50 of the population; 1,480 of these being in the Workhouses, and 2,373 on outdoor relief.

According to the Returns of the Registrar-General, the number of marriages registered in the County of Galway during the ten years ending 31st March, 1901, was 6,722, equal to an average annual rate of 3·3 per 1000 of the population. The number registered in the whole of Ireland during the same period, affords an average annual rate of 4·8 per 1,000.

The number of Births registered in the County during the ten years was 44,912, affording an average annual rate of 22·2 per 1,000 of the population, the average annual rate for the whole of Ireland during the same period being 23·0 per 1,000.

The Deaths registered during the decennium amounted to 30,779, being equal to an average annual rate of 15·2 per 1,000; the corresponding rate for the whole of Ireland was 18·2 per 1,000.

The number of Emigrants during the ten years ending 31st March, 1901, who stated that they were from the County of Galway, amounted to 36,820 (15,125 males, and 21,695 females); the number for the decade ending 31st March, 1891, was 51,121; for that ending 31st March, 1881, 23,665; for that ending 31st March, 1871, 38,758; and for that ending 31st March, 1861, 50,838, making a total of 201,202 for the fifty years.

C.—Return showing the Population, Area, Valuation, and Average Valuation per Head of Valuation in each Poor Law Union in the County of Galway containing Congested Districts.

RETURN SHOWING THE RATIO OF POPULATION TO VALUATION IN CERTAIN ELECTORAL DIVISIONS IN COUNTY GALWAY, AND OTHER PARTICULARS.*

Specially prepared for the Commission.

EXPLANATORY NOTE.

Return (prepared by the Commissioner of Valuation) shows the total rateable valuation (1906), the ion (1901), and the average valuation per head of population in each Electoral Division.

Where that average is under 30*s.*

Where that average is between 30*s.* and 50*s.*, but is brought below 30*s.* by the exclusion from the dividend (*i.e.*, the total rateable valuation of the electoral division) of all ratings valued at over £50. In these cases the acreage and valuation of each excluded area is given.

Where the electoral division, though scheduled as congested, does not come within either of the above classes.

total number of electoral divisions in Galway is 219, of which 213 are rural and 6 urban. The total of electoral divisions comprised in this return is 78, all rural; of these 21 are not scheduled as d and are distinguished by an asterisk.

total number of divisions in County Galway scheduled in 1891 as congested was 57, of which 2 were below 30*s.* in point of average valuation per head of population. Between 1891 and 1901 the valuation rose about 10 per cent. (owing mainly to the decrease in population). Of the 50 scheduled 12 are not now below 30*s.* Of these 12 divisions, 11 are not below 30*s.* normally, but are when the ation of all ratings above £50 is excluded, and 1 is above 30*s.*, even after these exclusions. The his division is printed in italics.

* This is taken from a similar Return for the whole of Ireland, which was published in the Appendices to the First Report ... pp. 367 *et seq.*

APPENDIX A.

F.—STATISTICS RELATING TO THE NUMBER, ACREAGE, VALUATION AND POPULATION OF VARIOUS CLASSES OF HOLDINGS, AND TO THE CHIEF DIVISIONS OF THE LAND IN COUNTY GALWAY.

Specially prepared for the Commission.

EXPLANATORY NOTE.

The information contained in the Tables I.–IV. has been specially prepared for the Commission by the Registrar-General from the office summaries of the Census of 1901. The importance of the figures and their interpretation were touched upon in a memorandum submitted by the Secretary to the Commission, and printed in the Appendices to the First Report of the Commission, pp. 351 *et seq.* It will suffice to remark here that, though nominally these tables are returns of "holdings," they are really returns of landholders, for, if one man has half-a-dozen farms in the same county, he is returned as having a single holding of their combined valuation. It is obvious that, so far as counties are concerned, these returns, being actually though not nominally returns of landholders, show more clearly the size of the problem requiring treatment than a return of holdings would—*e.g.*, a man has in County Galway six holdings valued at £2, £4, £6, £10, £20, and £40. A return of holdings would in this case apparently suggest that there were at least three holdings needing enlargement; whilst the present returns more clearly indicate the situation by showing only one holding of £82 valuation. As regards the size of the remedial material that might be made available for relieving congestion, these returns might, however, mislead—*e.g.*, in the case taken above the returns would suggest that there was in County Galway one holding of £82 valuation that possibly might be secured for the enlargement of small holdings; whilst in point of fact there are six holdings of varying size scattered over the county.

The interpretation of the figures becomes more complicated when they are examined not for the whole of a county, but for the comparatively small area of an electoral division—the present unit of congestion. In these returns, where one man has several holdings in County Galway, but in different electoral divisions, or has one holding which runs into two electoral divisions, the entire is allocated to the division containing the holding or the part of the holding of highest valuation; hence the figures in these returns do not represent the actual state of things in each electoral division, as they may include in such division land situate in other electoral divisions (of County Galway), and may exclude land geographically belonging to the division itself. Thus, the area, population, or valuation shown for an electoral division might be larger or smaller than the actual area, population, or valuation of that division. Adjustments could have been made rectifying this, but they would have immensely complicated matters. Moreover, the returns would then have been based in part on holdings rather than on landholders, and this would, for the reason shown above, have exaggerated the size of the problem. Consequently the Commission, having considered the relative advantages of adjusted and unadjusted returns of holdings and landholders, decided that as regards most areas the unadjusted returns of landholders by electoral divisions would be the most useful.

The information contained in Tables V. and VI. has been specially prepared for the Commission by the Department of Agriculture and Technical Instruction for Ireland from the office summaries of the Agricultural Statistics of 1906. Their importance and interpretation were touched upon in the memorandum to which reference has been already made, and it will suffice to remark here that the difference between the number of holdings given in Table V. and the number given in Table I. is accounted for by the following causes:—

(1) Table V. is a return of holdings, and Table I. a return of landholders.

(2) Table I. refers to agricultural holdings only, and Table V. includes labourers' cottage holdings and gardens; and

(3) Differences of classification and adjustment.

I.—Table showing Total Number of Holdings and Number of each of Eleven Classes, arranged according to Valuation, in the County of Galway.

Unions and Electoral Divisions.	Total Number of Holdings.	Classification of Holdings, and Number in each Class.										
		Not exceeding £4.	Above £4 and not exceeding £10.	Above £10 and not exceeding £15.	Above £15 and not exceeding £20.	Above £20 and not exceeding £30.	Above £30 and not exceeding £40.	Above £40 and not exceeding £50.	Above £50 and not exceeding £100.	Above £100 and not exceeding £200.	Above £200 and not exceeding £300.	Above £300 in value.

The following detailed information as regards direct sales is taken from the Report of the Estates Commissioners for 1906 (pp. 28–35) : —

In the County Galway (non-congested), 21 holdings, subject to judicial rents fixed or agreed to before the 14th August, 1896 (commonly called First Term Rents), amounting to £391 1*s.* 2*d.*, were sold at prices which came within the zones ; the average number of years' purchase being 22·0, and the average percentage of reduction in the purchase annuity as compared with the rent being 28 5. Two holdings, subject to a rental of £43 12*s.* 6*d.*, were sold at prices which came within the zones ; the number of years' purchase being 25·8, and the average percentage of reduction being 16·1—which is less than the minimum zone reduction.

As regards holdings subject to rents fixed or agreed to since the 14th August, 1896 (commonly called Second Term Rents), 51, subject to a rental of £970 6*s.* 9*d.*, were sold in Galway (non-congested) at a price within the zones ; the average number of years' purchase being 24 0 and the percentage of reduction being 22·0.

As regards non-judicial rent cases, 128 holdings in Galway (non-congested), subject to a rental of £1,829 17*s.* 6*d.*, were sold for an average of 21·7 years' purchase, the average percentage of reduction being 29·4.

In Galway (non-congested), 98 "parcels" were sold under Section (2) Sub-section (1) : one "demesne" and one "Trustee" were sold under Section (4).

M.—LOCAL TAXATION IN COUNTY GALWAY.

The following STATEMENTS show (1) the Poor Rates in each Electoral Division in each Union for the financial years ending in 1881 and 1891; (2) County Cess in each Barony in the County in 1891—there is no official information available as to County Cess in 1881; and (3) fuller details about the new Poor Rate for 1901 and 1905. It must, however, be pointed out that the Rates in 1881 and 1891 cannot be compared with the Rates in 1901 and 1905. Prior to the Local Government (Ireland) Act, 1898, Poor Rate was charged to Electoral Divisions and County Cess to Baronies. Now Union charges are levied over the whole Union, District charges on Rural Districts, County charges on the County, separate charges on special areas, and the whole is complicated by the charges made in the Rates by the Local Government Act of 1898.

Before that Act the Poor Rate was paid by the tenant (except in the case of holdings valued at £4 and under, where the landlord paid), but the tenant was entitled to deduct part of the amount paid from his rent, usually half. County Cess was paid and borne by the occupier, except in the case of holdings let after the 1st August, 1870. In these cases, if the holding was valued at over £4, the tenant paid, but was entitled to deduct from his rent part of the amount paid, usually one-half. If the holding was valued at £4 or under, the County Cess was paid by the landlord.

APPENDIX

Under the Act a Grant in Aid, called the Agricultural Grant, and amounting to £727,655, is made annually to the local authorities. This Grant is equal to half the combined Poor Rate and County Cess which was certified to be taken to have been raised off agricultural land in what is known as the standard financial year. The balance of the money required for purposes formerly met out of the County Cess and the Poor Rate is now provided by means of the new Poor Rate, County Cess being no longer collected *eo nomine*.

The Act was intended to secure the benefit of the Agricultural Grant in respect of existing tenancies to the landlord as regards the old Poor Rate, and to the tenant as regards the County Cess. In order to effect this it was provided that in the case of tenancies existing at the 1st April, 1899, the tenant should, in general, pay the new Poor Rate, but that the rent should be adjusted in such a way as to secure to landlord and tenant their respective shares of the benefit of the Agricultural Grant. In the case of tenancies created after the 1st April, 1899, the tenant must, in general, pay the Poor Rate, and has no right to deduct anything from his rent. Where a fair rent is fixed after the 1st April, 1899, special provision is made by Section 55 to ensure permanently to the occupier and the landlord their respective benefits from the Agricultural Grant.

(a) The enumeration of Emigrants from Irish Ports did not commence till the 1st of May, 1851.

APPENDIX X.

S.—STATE-AIDED EMIGRATION.

*** *Information was desired by the Commission as to the number of families who, with the assistance of Public Funds, emigrated from each Union in* 1883–4.

It may be as well to explain that, under 12 and 13 Vic., c. 104, sec. 26, Boards of Guardians were empowered to apply part of the rate and to borrow money "for the purpose of defraying, or assisting to defray, the expenses of the emigration of poor persons."

Under the Arrears of Rent (Ireland) Act, 1882 (45 and 46 Vic., c. 47), power was given to borrow from Public Funds on easier terms for the above purposes, and the Treasury might authorise the Commissioners of Public Works to make grants to Boards of Guardians for the same purposes, the total grants not to exceed £100,000, and the sum granted not to exceed £5 for each person. These grants were confined to the nine counties, part of which are at present scheduled as congested, the Union of Belmullet, Newport, Swinford, Clifden, and Oughterard being specially mentioned,

Under the Tramways and Public Companies (Ireland) Act, 1883 (46 and 47 Vic., cap. 43), the limit of the grant was increased to £200,000, of which one-quarter might be applied for the purpose of migrating "persons or families," and the limit of individual grants was increased to £8.

The total grants made under these sections amounted to £133,172 10*s.* 2*d.* up to 1891, when they were repealed by Section 35 of the Land Act of 1891, which established the Congested Districts Board.

The following Table shows the total number of State-aided Emigrants from Mayo in 1883-1884, and the amount of grant to each Union :—

Taken from the Thirteenth Report of the Local Government Board, p. 12.

APPENDIX V.

V.—SCHEMES OF THE DEPARTMENT OF AGRICULTURE AND TECHNICAL INSTRUCTION OPERATING IN COUNTY GALWAY IN 1906-7.

Specially supplied by the Department.

Agricultural Schemes of the Department in Operation during the Year 1906-7.

Scheme.	Estimated Cost to Joint Fund administered by County Committee of Agriculture.
	£
Itinerant Instruction in Agriculture,	350
Poultry-keeping,	390
Buttermaking,	159
Horticulture and Bee-keeping,	259
Cottage and Farm Prizes,	310
Live Stock,	1,000
Subsidies to Shows,	280

Itinerant Instruction.

Four Itinerant Instructors are employed in the county under the County Scheme, viz.—one in Agriculture, one in Horticulture and Beekeeping, one in Poultry Keeping, and one in Buttermaking.

Agricultural Instruction in Congested Districts.

In addition to the Instructors employed under the County Scheme, an Agricultural Overseer (Mr. R. Y. Smith, Clifden) and five Assistants are employed at present.

Special Demonstration Plots.

Potatoes,	807 plots
Oats,	640 ,,
Turnips and Mangels,	134 ,,
Grass,	86 ,,
Fertilisers,	311 ,,
Lime,	28 ,,

Horse Breeding.

The following registered Thoroughbred Stallions are located in the county :—

Coylton, with Andrew G. Elliott, Stoneyisland, Portumna.
Killaidan (property of Department), located at Athenry.
Merry Saint, with James Cosgrave, Portumna.
Well Fort, with John R. D'Arcy, Well Fort, Kilkerrin.
Blue Hackle, with Michael Dermody, Claremorris, travels to Tuam.
Merry Saint was supplied by Department under their Loan Scheme.

The Department have also placed at their own expense three Half-bred Stallions in the county—one at Clifden, one at Athenry, and one at Aran Island.

The following non-registered Stallions, which were taken over from the Congested Districts Board, are specially located in the county :—

Conn (Connemara pony), at Cornamona.
Movement (Welsh cob), at Gort.
Wolferton Marshes (Hackney), at Spiddal.
Merry Lad (Hackney), at Spiddal.
Oscar (Norwegian), at Leenane.

The County Committee at issuing 200 free nominations of mares under the 1907 scheme, the animals having been selected at the following centres :—

Centre.	Nominations provided.
Tuam,	33
Mount Bellew,	19
Glenamaddy,	15
Ballinasloe,	26
Portumna,	16
Loughrea,	16
Athenry,	16
Gort,	20
Claregalway,	18
Oughterard,	9
Clifden,	12

Ass Breeding.

Stallion Asses have been placed by the Department with—

Name.	*Address.*
James Molloy,	Clough, Ballymacward.
J. Cavanagh,	Trellick, Kinvarra.
P. Kennedy,	Slieveroe, Moyode.
P. Kenny,	Gurbyryan, Woodlawn.
H. M. Barrett,	Tulrush, Ballinasloe.
Thomas Treacy,	Newcastle.
Patrick Tierney,	Boffin Island.
F. J. Connolly,	Clifden House, Clifden.
John Toole,	Annaghvane, Bealadangan.

Cattle Breeding.

Premium Bulls are located under the County Scheme with the following persons :—

Name of Holder.	*Address.*
Michael Dillon,	Shanvally, Portumna.
Margaret Dempsey,	Lisheenavarnogue, Aughrim.
Andrew M'Grath,	Knockavally, Ballyconree.
Patrick Mongan,	Mynish Island, Carna.
Laurence Kelly,	Knockavaddy, Furbo, Barna.
James Molloy,	Clogh, Ballymacward, Gurteen.
Bernard Connaughton,	Lowville, Ahascragh.
Thomas Sweeney,	Mulrock, Kilcolgan.
John Madden,	Bawnmore, Athenry.
Thomas Burke,	Kilenny, Kinvarra.
Michael Diviney,	Fort Hill, Kilbeacanty, Gort.
Patrick M'Donagh.	Drim, Gorumna, Lettermore.
Julia Lydon,	Shanawoneen, Spiddal.
Thomas Welby,	Moyvoon, Oughterard.
John S. Royston,	Heathview, Aughrim.
C. J. Kerin,	Oranmore,
Michael Carr,	Lakeview, Moylough.
Michael Browne,	Portbrowne, Levally.
Michael Cunningham	Rushestown, Toomard, Mount Bellew.
Michael Garvey,	Mount Kelly, Glenamaddy.
Joseph Curran,	Garra, Ballyglunin.
Martin Costello,	Gortroe, Athenry.
Joseph Fair,	Balrickard, Headford.
Martin Hallinan,	Craughwell,.
M. J, Page,	Ohilly House, Woodford.
Bernard Naughton,	Cartron Kelly, Dysart.
Michael Royston,	Boula, Portumna.
Michael Dillon,	Shanvally, Portumna.

Premium Bulls are located with the following, the premiums being paid entirely out of the Department's funds :—

Name of Holder.	*Address.*
Martin Concannon,	Onacht, Aran Island.
Michael Little,	Bunowenbeg, Ballyconneely.
Gilbert Joyce,	Culfin, Renvyle.
The Superior.	Franciscan Monastery, Roundstone.
John Cawley,	Tully, Letterfrack.
John Folan,	Inveran.
Patrick Molloy,	Lettermore.
Patrick Walsh,	Kilbricken, Rosmuck.
Martin Walsh,	Garnagry, Rosscahill.
Patrick Salmon,	Culliaghbeg, Leenane.
Matthias O'Malley.	Attigoodawn, Cleggan.
Harry Toole,	Leam, Derryerglinna, Maam.
Philip Moran,	Moyard, Letterfrack.

Additional Bulls placed by the Department in Congested Districts on Special Instalment Terms.

Name of Owner.	*Address.*
Owen Kyne,	Moycullen.
John Conneely,	Tooreen, Carraroe.
Colman Keane,	Kilkerrin, Carna.
Charles O'Brien,	Coosaun, Oughterard.
Patrick King,	Ard East, Carna.
Anthony Nea,	Lettermakoo, Costello.
Christopher Toole,	Glanturkeen, Cashel.
Frank M'Hale,	Carraroe, Costello.
John Coyne,	Gowlane, Clifden.
Patrick M'Donagh,	Tiernea, Lettermore.
Patrick M'Keown,	Rossaveel, Costello.
Patrick Madden,	Lettershask, Ballyconneely, Clifden.
Peter King,	Derreen, Maam.
Frank Connolly,	Clifden House, Clifden.
Stephen Hyland,	Glanlusk, Cornamona.

APPENDIX X.

Swine Breeding.

Premium Boars are located with the following :--

Name of Owner.	*Address.*
Martin Costelo,	Gortroe, Athenry.
Patrick Cullinan,	Cahergower, Claregalway.
Patrick Kenny,	Gortyroan, Woodlawn.
John Crehan,	Gurteen, Mount Bellew.
Michael Garvey,	Mountkelly, Glenamaddy.
Patrick Fahy,	Lisnageeragh, Ballymoe.
Mrs. Bridget Murray,	Carrowkeel, Dunmore.
Michael Nestor,	Quingaltagh, Dunmore.
Patrick M'Donagh,	Abbey, Loughrea.
Michael Harte,	Drummin, Gort.
John Crehan,	Clonlyon, Ballygar.
Joseph Fair,	Balrickard, Headford.
David A. Page,	Ohilly House, Woodford.
Mrs. M. Dempsey,	Lisheenavarnogue, Aughrim.
Michael Morris,	Barnaderg, Tuam.
Thomas Corless,	Mountscribe, Kinvarra.
Mrs. Mary Treacy,	Knock, Milltown.
Martin Slattery,	Peterswell, Gort.
Patrick Cooke,	Abbey, Ballyglunin.
Martin Hallinan,	Craughwell.
James Larkin,	Slateford, Killimor

Premium Boars are located with the following, the premiums being payable entirely out of the Department's Funds :—

Name of Owner.	*Address.*
Patrick Mannion,	Kilbricken, Rosmuck.
Mrs. Julia Lydon,	Shanavoneen, Spiddal.
Michael Griffin,	Derrynea, Costello, Maam Cross.
Mark Flanagan,	Ballymonough, Clonbur.
Rev. Brother Butler,	Industrial School, Letterfrack.
T. Mulkerrin,	Claddaghduff, Clifden.
Valentine Keaney,	Gowla, Recess.
Laurence Kelly,	Furbo, Barna.
Patrick Cannon	Derrybrien, Gort.

Sheep Breeding.

Rams located in Congested Districts in County Galway in 1906.

Name of Owner.	*Address.*
Patrick Walsh,	Thuriskiheen, Clifden.
Festus Mullen,	Curhour, Claddaghduff.
Patrick Melody,	Glan, Claddaghduff.
Michael Browne,	Faukeeras, Clifden.
Patrick Gavin,	Lettershanna, Clifden.
Anthony Nee,	Lettermuckoo, Costello.
John Coyne,	Glenagnulagh, Leenane.
Patrick Coyne,	Glenagnulagh, Leenane.
Anthony Coyne,	Glenagnulagh, Leenane.
John Mullins,	Kilronan, Aran Island.
Patrick Darcy,	Garnagry, Moycullen.

List showing the Names and Addresses of Holders of Egg Distribution Stations (Hens and Ducks) under the Poultry Scheme, 1906–7.

Name.	*Address.*
Mrs. Clarke,	Thomastown, Tuam.
Sister M. A. Coffey,	Convent, Clarenbridge.
Mrs. Conneely,	Forge, Spiddall.
Mrs. Conroy,	Turloughbeg, Rosmuck.
Miss Curran,	Garra, Ballyglunin.
Mrs. Daly,	Ballymoney, Dunmore.
Mrs. Delany,	Pularossa, Williamstown.
Mrs. Dempsey,	Lisheenavarnogue, Aughrim.
Mrs. Diviney,	Forkhill, Kilbeacanty.
Laurence Farmer,	Gorumna, Lettermore.
P. J. Fitzmaurice,	Drinan, Ballygar.
Miss Flanagan,	Liscune, Woodlawn.
Mrs. Garvey,	Mountkelly, Glenamaddy.
Mrs. Grealy.	Cluid, Drumgriffin.
Mrs. Hallinan,	Craughwell.
Mrs. Hanly,	Letterfrack.
Mrs. Higgins,	Ryehill, Monivea.
Mrs. P. C. Hogan,	Maryville House, Kinvarra.
Mrs. Kelly,	Grangepark, Loughrea.
Mrs. Kelly,	Menlough, Ballinasloe.

List showing the Names and Addresses of Holders of Egg Distribution Stations (Hens and Ducks) under the Poultry Scheme, 1906–7—*continued.*

Name.	*Address.*
Miss King,	Leenane.
Mrs. Larkin,	Slateford, Killimor.
Mrs. M'Quinn,	Eighterard, Oughterard.

Mrs. Keane,	Kilconly, Tuam.
James Molloy,	Clough, Ballymacward.
Mrs. Mulkerin,	Clydagh, Moycullen.
Miss O'Flahertie,	Killola, Rosscahill.
Mrs. Dinane,	Cappasheen, Kinvarra.
Mrs. Tracey,	Castle Turvin, Athenry.
Mrs. Trayers,	Middlethird, Oranmore.

W.—NOTE ON MIGRATORY LABOURERS.

The special characteristics of the temporary migration of agricultural labourers from the congested districts, which distinguish it from apparently similar movements of labour in other counties and from the ordinary examples of the mobility of labour in other trades, have been briefly discussed in the Donegal Statistical Abstract (see Appendix to Second Report of Commission, Cd. 3319, 1907, p. 253.) The total number of persons (including females) who had temporarily migrated from Ireland, or who at the time of the collection of the Agricultural Statistics in 1906 had expressed their intention of subsequently migrating, was 15,286. Of this number 1,125 were resident in County Galway. Of these 202 were landholders, but of the landless labourers 732 were the sons, and 1 was the daughter of landholders who worked on their parents' farm when at home. The following Table taken from the Annual Report of the Department of Agriculture on Irish Migratory Labourers for 1906 (pp. 36–7), gives further information on the subject.

Poor Law Union.	Number of Migratory Agricultural Labourers not Landholders.	Number of Migratory Agricultural Labourers having Land, and Area of their Holdings.												Total Number of Migratory Agricultural Labourers	Where Employed.			Number of Migratory Agricultural Labourers who had not left their homes at the time of the Inquiry, included in foregoing Columns.

APPENDIX XI.—STATISTICAL ABSTRACT—COUNTY ROSCOMMON.

A.—PREFATORY NOTE.

Special statistics relating to County Roscommon have been prepared for the Commission by the Commissioner of Valuation (see pp. 418–9), the Registrar-General (see pp. 421–32) and the Department of Agriculture and Technical Instruction (see pp. 433–8), and certain returns have been furnished at the request of the Commission by the Local Government Board, the Congested Districts Board, and the Department of Agriculture and Technical Instruction. Other information about County Roscommon is available in different publications, *e.g.*, the Census Returns, the Annual Agricultural Statistics, the Annual Reports of the Irish Land Commission, the Estates Commissioners, the Congested Districts Board, &c.

All this statistical information has been brought together in the following pages, added to, and collated, and explanatory notes have been added, where required (*e.g.*, pp. 418, 420, 443, 455, and 463), with the view of forming a compact Statistical Abstract of the chief points of interest in County Roscommon, which may prove of assistance to the Commissioners during their sittings in County Roscommon, and subsequently be helpful to readers of the evidence.

WALTER CALLAN,
Secretary.

6th September, 1907.

B.—GENERAL STATISTICAL INFORMATION TAKEN FROM THE CENSUS REPORT, 1901, COUNTY ROSCOMMON BOOK (pp. vii. and viii.).

The (Administrative) County of Roscommon covers an area of 629,633 statute acres, or 3·0 per cent. of the total area of the country.

The number of persons in the County of Roscommon according to the Census was—in 1881, 135,634; in 1891, 116,552; and according to the recent Census, 101,791 (51,233 Males and 50,558 Females), or 12·7 per cent. less than in 1891.

The number of distinct Families in the County at the time of the late enumeration was 21,030, the average number of persons in a family being thus 4·8; and the number of Inhabited Houses was 20,817, showing an average of 4·8 persons to each house. In calculating these averages, the Special Inmates of Public Institutions have been omitted.

The following statement shows, by County Districts, as constituted under the Local Government (Ireland) Act, 1898, the population of the County in 1891 and 1901; and the decrease during the decade:—

County Districts.	Population.		Decrease between 1891 and 1901.	
	1891.	1901.	Number.	Rate per cent.
Athlone No. 2 Rural	12,069	1,0701	1,368	11·3
Ballinasloe No. 2 Rural	4,176	3,681	495	11·9
Boyle No. 1 Rural	19,317	16,868	2,449	12·7
Carrick-on-Shannon No. 2 Rural, ..	7,494	6,241	1,253	16·7
Castlereagh Rural, ...	37,473	33,576	3,897	10·4
Roscommon Rural, ...	17,562	15,164	2,398	13·7
Strokestown Rural, ...	18,461	15,560	2,901	15·7
Total, ...	116,552	101,791	14,761	12·7

From the foregoing statement it will be observed that the highest percentage of decrease in the County occurs each place in Carrick on Shannon No. 2 Rural and Strokestown Rural, viz., 16·7 and 15·7 respectively; and the lowest in Castlereagh Rural, Athlone No. 2 Rural, viz., 10·4 and 11·3 respectively.

Towns having, in 1901, a population of 2,000 and upwards are classified as civic areas.

The County contains one such area, viz., Boyle. In 1891 the population of this area amounted to 2,464; in 1901, it was 2,477, showing an increase of 13 persons; in the rural portions of the County the decrease was 12·9 per cent.

APPENDIX XI.

The following Statement shows the Educational status of the Inhabitants of the County of Roscommon in 1891 and 1901, in so far as relates to the degrees of elementary education relative to which inquiry was made on the Census Form.

Degrees of Elementary Education.	Rate per cent. of Total Population.	
	1891.	1901.
Read and Write, ...	63·2	72·2
Read only, ...	10·5	6·3
Illiterate, ...	26·3	21·5
Total, ...	100·0	100·0

From the above, it will be seen that, whereas, according to the returns of 1891, only 63·2 per cent. of the Inhabitants, at all ages, could "read and write," in 1901, 72·2 per cent. could do so; that the percentage of the population who could "read only" in 1891 was 10·5, and in 1901, 6·3; and that the percentage of the "illiterate" fell from 26·3 in 1891 to 21·5 in 1901.

In 1891 18·2 per cent. of the inhabitants aged 5 years and upwards were illiterate (17·6 per cent. of the males and 18·9 of the females); in 1901 the percentage was but 13·1 (13·2 of the males and 13·7 of the females).

The number of children attending school in the County of Roscommon, according to the Census of 1891 (week ending 30th May), was 17,951, or 41·6 per cent. of persons aged 5 years and under 20 in the County as then constituted; in 1901 the number returned (for week ending 11th May) was 15,207, or 44·3 per cent. of the persons aged 5 and under 20.

In 1891 the number of persons in the County of Roscommon (as then constituted) returned as Sick on the night of the Census, was 569, or one in every 201 of the population; in 1901 the number so returned was 540, or one in every 189 of the population; of the latter number 295 were at their own homes, and 245 were in hospital.

The number of persons returned in 1891 as receiving relief under the Poor Law System was 2,397, or one in every 48 of the population; of this number 746 were inmates of Workhouses, and 1,651 were in receipt of outdoor relief; in 1901 the number returned was 2,021, or one in every 50 of the population; 689 of these being in the Workhouses, and 1,332 on outdoor relief.

According to the Returns of the Registrar-General, the number of marriages registered in the County of Roscommon during the ten years ending 31st March, 1901, was 3,976, equal to an average annual rate of 3·6 per 1,000 of the population. The number registered in the whole of Ireland during the same period, affords an average annual rate of 4·8 per 1,000.

The number of Births registered in the County and City during the ten years was 21,195, affording an average annual rate of 19·4 per 1,000 of the population, the average yearly rate for the whole of Ireland during the same period being 23·0 per 1,000.

The Deaths registered during the decennium amounted to 15,452, being equal to an average annual rate of 14·2 per 1,000; the corresponding rate for the whole of Ireland was 18·2 per 1,000.

The number of Emigrants during the ten years ending 31st March, 1901, who stated that they were from the County of Roscommon amounted to 16,332 (7,106 males and 9,226 females); the number for the decade ending 31st March, 1891, was 23,128; for that ending 31st March, 1881, 13,790; for that ending with March, 1871, 21,393; and for that ending with March, 1861, 27,756, making a total of 102,399 for the fifty years.

C.—Return showing the Population, Area, Valuation, and Average Valuation per head of Population in each Poor Law Union in the County of Roscommon containing Congested Districts.

Supplied by the Congested Districts Board.

APPENDIX XI

E.—RETURN SHOWING THE RATIO OF POPULATION TO VALUATION IN CERTAIN ELECTORAL DIVISIONS IN CO. ROSCOMMON, AND OTHER PARTICULARS.†

Specially prepared for the Commission.

EXPLANATORY NOTE.

This return (prepared by the Commissioner of Valuation) shows the total rateable valuation (1906), the population (1901), and the average valuation per head of population in each Electoral Division in Co. Roscommon :—

(1.) Where that average is under 30*s.*

(2.) Where that average is between 30*s.* and 50*s.*, but is brought below 30*s.* by the exclusion from the dividend (*i.e.*, the total rateable valuation of the electoral division) of all ratings valued at over £50. In these cases the acreage and valuation of each excluded area is given.

(3.) Where the electoral division though scheduled as congested does not come within either of the above classes.

The total number of electoral divisions in Roscommon is 112, all rural. The total number of electoral divisions comprised in this return is 21, all rural. Of these, one electoral division (Grannagh) is now scheduled as congested, and is indicated by an asterisk.

The total number of divisions in Co. Roscommon scheduled in 1891 as congested was 20, of which 1 was then not below 30*s.* in point of average valuation per head of population. Between 1891 and 1901 the average valuation rose about 16 per cent. (owing mainly to the decrease in population), and of the 20 divisions, 7 are not now below 30*s.* Of these 7 divisions, 2 are not below 30*s.* normally, but are when the total valuation of all ratings above £50 is excluded, and 5 are above 30*s.* even after these exclusions. The names of these divisions are printed in italics.

APPENDIX XI.

F.—STATISTICS RELATING TO THE NUMBER, ACREAGE, VALUATION AND POPULATION OF VARIOUS CLASSES OF HOLDINGS, AND TO THE CHIEF DIVISIONS OF THE LAND IN THE COUNTY OF ROSCOMMON.

Specially prepared for the Commission.

EXPLANATORY NOTE.

The information contained in the Tables I.-IV. has been specially prepared for the Commission by the Registrar-General from the office summaries of the Census of 1901. The importance of the figures and their interpretation were touched upon in a memorandum submitted by the Secretary to the Commission, and printed in the Appendices to the first Report of the Commission, pp. 351 *et seq.* It will suffice to remark here that, though nominallly these tables are returns of "holdings," they are really returns of landholders, for, if one man has half-a-dozen farms in the same county, he is returned as having a single holding of their combined valuation. It is obvious that, so far as counties are concerned, these returns, being actually though not nominally returns of landholders, show more clearly the size of the problem requiring treatment than a return of holdings would—*e.g.*, a man has in County Roscommon six holdings valued at £2, £4, £6, £10, £20 and £40. A return of holdings would in this case apparently suggest that there were at least three holdings needing enlargement; whilst the present returns more clearly indicate the situation by showing only one holding of £82 valuation. As regards the size of the remedial material that might be made available for relieving congestion, these returns might, however, mislead—*e.g.*, in the case taken above the returns would suggest that there was in County Roscommon one holding of £82 valuation that possibly might be secured for the enlargement of small holdings; whilst in point of fact there are six holdings of varying size scattered over the county.

The interpretation of the figures becomes more complicated when they are examined not for the whole of a county, but for the comparatively small area of an electoral division—the present unit of congestion. In these returns where one man has several holdings in County Roscommon, but in different electoral divisions, or has one holding which runs into two electoral divisions, the entire is allocated to the division containing the holding or the part of the holding of highest valuation; hence the figures in these returns do not represent the actual state of things in each electoral division, as they may include in such division land situate in other electoral divisions (of County Roscommon), and may exclude land geographically belonging to the division itself. Thus the area, population, or valuation shown for an electoral division might be larger or smaller than the actual area, population, or valuation of that division. Adjustments could have been made rectifying this, but they would have immensely complicated matters. Moreover, the returns would then have been based in part on holdings rather than on landholders, and this would, for the reason shown above, have exaggerated the size of the problem. Consequently the Commission having considered the relative advantages of adjusted and unadjusted returns of holdings and landholders, decided that as regards most areas the unadjusted returns of landholders by electoral divisions would be the most useful.

The information contained in Tables V. and VI has been specially prepared for the Commission by the Department of Agriculture and Technical Instruction for Ireland from the office summaries of the Agricultural Statistics of 1906. Their importance and interpretation were touched upon in the memorandum to which reference has been already made, and it will suffice to remark here that the difference between the number of holdings given in Table V. and the number given in Table I. is accounted for by the following causes:—

(1) Table V. is a return of holdings, and Table I. a return of landholders;

(2) Table I. refers to agricultural holdings only, and Table V. includes labourers' cottage holdings and gardens; and

(3) Differences of classification and adjustment.

The following detailed information as regards direct sales is taken from the Report of the Estates Commissioners for 1906 (pp. 28 to 35):—

In the County Roscommon (non-congested), 498 holdings, subject to judicial rents, fixed, or agreed to, before the 14th August, 1896 (commonly called first term rents), amounting to £5,473 1*s.* 2*d.*, were sold at a price which came within the zones, the number of years' purchase being 22·2, and the percentage of reduction in the purchase annuity, as compared with the rent, being 27·8. Twelve holdings were sold at prices which came outside the zones. Of these, four holdings, subject to a rental of £37 19*s.* 6*d.*, were sold for 16·4 years' purchase, the percentage of reduction being 46·7, *i.e.*, a reduction greater than the maximum zone reduction. Eight holdings, subject to a rental of £329 17*s.* 6*d.*, were sold for 25·1 years' purchase, the percentage of reduction being 18·4, which is less than the minimum zone reduction.

In the County Roscommon (congested), 341 holdings, subject to judicial rents fixed, or agreed to, before the 14th August, 1896 (commonly called first term rents), amounting to £1,537 16*s.* 6*d.*, were sold at prices which came within the zones; the average number of years' purchase being 20·4, and the average percentage of reduction in the purchase annuity, as compared with the rent, being 33·7. Three holdings were sold at prices outside the zones. Of these, two holdings, subject to a rental of £10 19*s.* 6*d.*, were sold for 16·4 years' purchase, the percentage of reduction being 46·7, which is greater than the maximum zone reduction. One holding, subject to a rental of 8*s.*, was sold for 25 years' purchase, the percentage of reduction being 18·7, which is less than the minimum zone reduction.

As regards holdings subject to rents fixed, or agreed to, since the 14th August, 1896 (commonly called second term rents), 49, subject to a rental of £1,146 4*s.*, were sold in Roscommon (non-congested), at an average of 25·2 years' purchase; the average percentage of reduction being 18·1. Sixteen holdings were sold at a price outside the zones; the rental being £124 19*s.* 10*d.*; the average number of years' purchase being 20·8, and the average percentage of reduction being 32·4, *i.e.*, a greater percentage than the maximum zone reduction.

In Roscommon (congested) 60 holdings, subject to second term rents of £260 8*s.*, were sold, within the zones, for an average of 23·2 years' purchase; the average percentage of reduction being 24·6. Two holdings, subject to a second term rent of £8 6*s.* 9*d.*, were sold, outside the zones, for an average of 19·2 years' purchase; the average percentage of reduction being 37·6, which is greater than the maximum zone reduction.

As regards non-judicial rent cases, 215 holdings in Roscommon (non-congested), subject to a rental of £2,725 14*s.* 10*d*, were sold for an average of 22·9 years' purchase: the average percentage of reduction being 25·5. In Roscommon (congested), 45 holdings, subject to a rental of £178 3*s.* 10*d.*, were sold for 18·9 years' purchase; the percentage of reduction being 18·5. Six holdings, subject to a rental of £338 3*s.* 3*d.*, were sold for £8,158, and of this sum £3,158 was paid in cash by the purchasers. Twelve

L.—LOCAL TAXATION IN COUNTY ROSCOMMON.

The following STATEMENTS show (1) the Poor Rates in each Electoral Division in each Union for the financial years ending in 1881 and 1891; (2) County Cess in each Barony in the County in 1891—there is no official information available as to County Cess in 1881, and (3) fuller details about the new Poor Rate for 1901 and 1905. It must, however, be pointed out that the Rates in 1881 and 1891 cannot be compared with the Rates in 1901 and 1905. Prior to the Local Government (Ireland) Act, 1898, Poor Rate was charged to Electoral Divisions and County Cess to Baronies. Now Union charges are levied over the whole Union, District charges on Rural Districts, County charges on the County, separate charges on special areas, and the whole is complicated by the charges made in the rates by the Local Government Act of 1898.

Before that Act the Poor Rate was paid by the tenant (except in the case of holdings valued at £4 and under, where the landlord paid), but the tenant was entitled to deduct part of the amount paid from his rent, usually half. County Cess was paid and borne by the occupier, except in the case of holdings let after the 1st August, 1870. In these cases, if the holding was valued at over £4, the tenant paid, but was entitled to deduct from his rent part of the amount paid, usually one-half. If the holding was valued at £4 or under, the County Cess was paid by the landlord.

Under the Act a Grant in Aid, called the Agricultural Grant, and amounting to £727,655, is made annually to the local authorities. This grant is equal to half the combined Poor Rate and County Cess which was certified to be taken to have been raised off agricultural land in what was known as the standard financial year. The balance of the money required for purposes formerly met out of the County Cess and the Poor Rate is now provided by means of the new Poor Rate, County Cess being no longer collected *eo nomine*.

The Act was intended to secure the benefit of the Agricultural Grant in respect of existing tenancies to the landlords as regards the old Poor Rate, and to the tenant as regards the County Cess. In order to effect this it was provided that in the case of tenancies existing at the 1st April, 1899, the tenant should, in general, pay the new Poor Rate, but that the rent should be adjusted in such a way as to secure to landlord and tenant their respective shares of the benefit of the Agricultural Grant. In the case of tenancies created after the 1st April, 1899, the tenant must, in general, pay the Poor Rate, and has no right to deduct anything from his rent. Where a fair rent is fixed after the 1st April, 1899, special provision is made by Section 55 to ensure permanently to the occupier and the landlord their respective benefits from the Agricultural Grant.

1. STATEMENT showing the Poor Rate in the Pound made in the Electoral Divisions of the Unions which are included wholly or partly in County Roscommon for the financial years 1881 and 1891.

Specially prepared by the Local Government Board.

(a) The enumeration of emigrants from Irish Ports did not commence till the 1st of May, 1851.

R.—STATE-AIDED EMIGRATION.

It may be as well to explain that under 12 and 13 Vic., c. 104, sec. 26, Boards of Guardians were empowered to apply part of the rates and to borrow money "for the purpose of defraying or assisting to defray the expenses of the emigration of poor persons."

Under the Arrears of Rent (Ireland) Act, 1882 (45 and 46 Vic., c. 47), power was given to borrow from Public Funds on easier terms for the above purposes, and the Treasury might authorise the Commissioners of Public Works to make grants to Boards of Guardians for the same purposes, the total grants not to exceed £100,000, and the sums granted not to exceed £5 for each person. These grants were confined to the nine counties, part of which are at present scheduled as congested, the Unions of Belmullet, Newport, Swinford, Clifden, and Oughterard being specially mentioned.

Under the Tramways and Public Companies (Ireland) Act, 1883 (46 and 47 Vic., c. 43), the limit of the grant was increased to £200,000, of which one-quarter might be applied for the purpose of migrating "persons or families," and the limit of individual grants was increased to £8.

The total grants made under these sections amounted to £133,172 10*s.* 2*d.* up to 1891, when they were repealed by section 35 of the Land Act of 1891, which established the Congested District Board.

The following table shows the total number of State-aided emigrants from the County of Roscommon in 1883 and in 1884, and the amount of grant to each Union :—

Taken from the Thirteenth Report of the Local Government Board, p. 12.

Union.	Emigration Season, 1883.			Emigration Season, 1884.			Total.	Total Grant.

Mrs. Doyle,	Millbrook, Athlone.
Mrs. Wallace,	Ballybane, Ballinlough.

V.—NOTE ON MIGRATORY LABOURERS.

The special characteristics of the temporary migration of agricultural labourers from the congested districts, which distinguish it from apparently similar movements of labour in other counties and from the ordinary examples of the mobility of labour in other trades, have been briefly discussed in the Donegal Statistical Abstract (see Appendix to Second Report of Commission, Cd. 3319, 1907, pp. 314–5). The total number of persons (including females) who had temporarily migrated from Ireland, or who at the time of the collection of the Agricultural Statistics in 1906 had expressed their intention of subsequently migrating, was 15,286. Of these only 1,432 were resident in County Roscommon. Of this number only 305 were landholders, but of the landless labourers 836 were the sons, and 2 were the daughters of landholders who worked on their parents' farms when at home. The following Table, taken from the Annual Report of the Department of Agriculture on Irish Migratory Labourers for 1906 (pp. 38–9), gives further information on the subject :—

POOR LAW UNION.	Number of Migratory Agricultural Labourers not Landholders.	NUMBER OF MIGRATORY AGRICULTURAL LABOURERS HAVING LAND, AND AREA OF THEIR HOLDINGS.												Total Number of Migratory Agricultural Labourers	WHERE EMPLOYED.			Number of Migratory Agricultural Labourers who had not left their homes at the time of the Inquiry, included in foregoing Columns.
		Not exceeding 1 acre.	Above 1 and not exceeding 2 acres.	Above 2 and not exceeding 3 acres.	Above 3 and not exceeding 4 acres.	Above 4 and not exceeding 5 acres.	Above 5 and not exceeding 10 acres. ROYAL COMMISSION ON CONGESTION IN IRELAND.

WARRANT APPOINTING THE COMMISSION.

EDWARD *R. & I.*

EDWARD THE SEVENTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas King, Defender of the Faith, to

Our right trusty and right well-beloved Cousin and Councillor WILLIAM HUMBLE, EARL OF DUDLEY, Knight Grand Cross of Our Royal Victorian Order;

Our right trusty and well-beloved Councillor SIR ANTONY PATRICK MACDONNELL, Knight Grand Commander of Our Most Exalted Order of the Star of India, Knight Commander of Our Royal Victorian Order, Under Secretary to Our Lieutenant-General and General Governor of that part of Our United Kingdom of Great Britain and Ireland called Ireland;

Our right trusty and well-beloved Councillor SIR JOHN CHARLES READY COLOMB, Knight Commander of Our Most Distinguished Order of Saint Michael and Saint George;

Our right trusty and well-beloved Councillor SIR FRANCIS MOWATT, Knight Grand Cross of Our Most Honourable Order of the Bath, Companion of Our Imperial Service Order; and

Our trusty and well-beloved :—

The Most Reverend PATRICK O'DONNELL, Doctor in Divinity;

JOHN ANNAN BRYCE, Esquire;

WALTER INCH KAVANAGH, Esquire;

CONOR O'KELLY, Esquire; and

ANGUS SUTHERLAND, Esquire; Chairman of the Fishery Board for Scotland;

GREETING!

Whereas We have deemed it expedient that a Commission should forthwith issue to inquire into and report upon the operation of the Acts dealing with Congestion in Ireland, the working of the Congested Districts Board, and the Land Commission under these Acts, and the relations of the Board with the Land Commission and the Department of Agriculture and Technical Instruction; what areas (if any) outside the districts now scheduled as congested, require to be dealt with as congested; what lands are most conveniently situated for the relief of congestion; what changes in law or administration are needed for dealing with the problem of congestion as a whole, for facilitating the migration of the surplus population from congested areas to other lands, and generally for bettering the condition of the people inhabiting congested areas.

Now know ye that We, reposing great trust and confidence in your knowledge and ability, have nominated, constituted and appointed, and do by these Presents nominate, constitute and appoint you the said William Humble, Earl of Dudley (Chairman); Sir Antony Patrick MacDonnell; Sir John Charles Ready Colomb; Sir Francis Mowatt; Patrick O'Donnell; John Annan Bryce; Walter Inch Kavanagh; Conor O'Kelly; and Angus Sutherland to be Our Commissioners for the purposes of the said Inquiry.

And for the better effecting the purposes of this Our Commission, We do by these Presents give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to, and examine all such books, documents, registers and records as may afford you the fullest information on the subject; and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these Presents authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid, and to employ such persons as you may think fit to assist you in conducting any inquiry which you may hold.

And We do by these Presents will and ordain that this Our Commission shall continue in full force and virtue, and that you, Our said Commissioners, or any three or more of you, may from time to time proceed in the execution thereof and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any three or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us under your hands and seals, or under the hands and seals of any three or more of you, your opinion upon the matters herein submitted for your consideration.

Given at Our Court at *St. James's*, the 20th day of July, 1906, in the sixth year of Our Reign.

By His Majesty's Command.

H. J. GLADSTONE.

Appointment of Secretary.

DUBLIN CASTLE,

July 24, 1906.

WALTER ERNEST EVERARD CALLAN, Esquire, B.L., The Castle, Dublin, has been appointed to be Secretary of the Royal Commission appointed to inquire into and report upon the operation of the Acts dealing with Congestion in Ireland.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

ELEVENTH REPORT.

TO THE KING'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

We, the Commissioners appointed by Your Majesty on the 20th July, 1906,

> "To inquire into and report upon the operation of the Acts dealing with Congestion in Ireland, the working of the Congested Districts Board, and the Land Commission under these Acts, and the relations of the Board with the Land Commission and the Department of Agriculture and Technical Instruction; what areas (if any) outside the districts now scheduled as congested, require to be dealt with as congested; what lands are most conveniently situated for the relief of congestion; what changes in law or administration are needed for dealing with the problem of congestion as a whole, for facilitating the migration of the surplus population from congested areas to other lands, and generally for bettering the condition of the people inhabiting congested areas,"

Availing ourselves of Your Majesty's permission to report our proceedings from time to time, desire to submit to Your Majesty, as an Appendix to this eleventh preliminary Report, minutes of the evidence taken in London during the month of January, and statements and returns in writing that have been furnished to us in connection therewith.

We think that the immediate publication of these documents is desirable.

All of which we humbly submit for Your Majesty's most gracious consideration.

DUDLEY, *Chairman.*
A. P. MACDONNELL.
JOHN C. R. COLOMB.
FRANCIS MOWATT.
✠ PATRICK O'DONNELL.
JOHN ANNAN BRYCE.
WALTER KAVANAGH.
CONOR O'KELLY.
ANGUS SUTHERLAND.

WALTER CALLAN,
Secretary.

LONDON. Dated this 14th day of April, 1908.

DIGEST OF EVIDENCE.

DORAN, Mr. HENRY.

See pp. 1-36.

Classification of Estates bought by the Board under Act of 1903, which had been treated and prepared for sale—According to amount of loss on improvements.

Particulars had been prepared of the actual loss incurred by the Board in treating estates bought under the Act of 1903, 59394.—These estates were classified as follows:—Class A.—Poor tenanted estates on some of which there was a small proportion of untenanted land available for migration and enlargement of holdings; Class B.—Very poor tenanted estates on which there was practically no agricultural land available for these purposes; Class C.—Estates comprised wholly or mainly of untenanted land used chiefly for migration; the total purchase price of A., B., and C. was £317,639, the total expenditure on improvements £81,249, and the total net loss £41,152, 59561.—The total poor law valuation £12,457, and the total area 53,627 acres, of which 10,558 acres were untenanted, and 43,096 acres were tenanted, 59394-8, 59400-2, 59561, 59640, 59828.—Class A., represented by the Dillon and De Freyne Estates, comprised 76·1 of the gross purchase money, and though the improvement had been substantial, the percentage of loss had only been 9·4 of the cost price of the estates, 59561.—Class B., represented by the Carna, Erris, and Connemara Estates, and those about Mallaranny, comprised 15·6 per cent. of the gross purchase money; the only improvements effected had been improvement of dwellings, re-arrangement of holdings, and the making of roads and drains; the number of economic holdings had not been materially increased, 59562.—Improvements had not been considered sufficiently directly reproductive for any appreciable portion of the outlay to be charged to the sale prices of holdings, so that the percentage of loss had been 21·6 per cent. of the cost price of the estates, 59572.—Class C. comprised only 8·3 per cent. of the gross purchase money; its total area was 3,000 acres of grass land, and the loss 28·8 per cent., 59562, 59572.—The average loss on A., B., and C. together was 12·9 per cent., 59577, 59708, 59764, 59810, 59837, 59941, 59948.

Typical Character of Estates Classified.

Improvements had been effected as economically as was consistent with efficiency, and as the above were average estates, the result of the operations, though not an absolute guide, should afford the safest available information on which to estimate the loss likely to be involved in the treatment of similar properties, 59405, 59574, 59644, 59655, 59678, 59681, 59834, 59943, 59945.

Effect which the granting of Compulsory Powers would have on percentage of loss.

It was, however, most important to analyse the character of the above estates; 75 per cent. consisted of properties needing improvement, but responding to treatment like the Dillon Estate. The Board had done their best for A. but sufficient relief had not been given. They had not been able to acquire the lands best suited for migration purposes, and consequently very few people had migrated. A number of Dillon Estate tenants would go if lands could be acquired near at hand. Granted compulsory powers, greater improvements could be effected in future, and the 9 per cent. loss on A would be increased, 59575-91, 59705, 59837, 59843-4.—It was not likely that in practice all the tenants of an estate could be provided with economic holdings. The arrangements on Colonel Smith's estate in Erris and on the Madden Estate had approached the ideal, and the loss had

DORAN, Mr. HENRY—*continued.*

been 25·4 and 24 per cent. respectively, 79704-8.—The Dillon Estate had, owing to favourable circumstances, been treated without loss, which fact had reduced the average percentage of loss to 6 per cent. If the Dillon Estate had to be bought to-day, improvements like those effected would, by themselves, mean a loss of 10 per cent., and this would be at least doubled if really satisfactory treatment were given. This would be the case on all such estates unless they happened to contain a large area of grass land, 59592-8, 59672-6, 59696-9.

Low percentage of loss when Untenanted Land was in the ambit of the Estate.

The Armstrong Estate was a fair illustration of the result of operations in favourable circumstances. Few new houses had been required, and the untenanted land, though not near the tenanted, had been within the ambit of the estate. Had it been at any distance the actual net loss of 15 per cent. would have been greatly increased, perhaps doubled. The land might have cost even less—the increased expenditure would have been on building, fencing, and road-making. Advances on the sale price of holdings had been taken into account when estimating the 15 per cent. loss, but not loans, 59598-615.—Assuming what was unlikely—that fifty families would have migrated, the net loss would have been at least £100 per family, although a certain proportion of the expenditure would have been put on the annuity, 59598-619.

Proportion of B Estates which should be bought, and treatment which should be given.

If a million's worth of land were bought annually, it would not be advisable to buy more than 10 per cent. of the B class; the area of these estates was not indicated by the percentage, *e.g.*, the Berridge Estate, though very large, was not worth much; congestion on these properties could not be much relieved by migration; the majority were remote from grass areas, and a considerable number of occupiers objected to migration, and in any case were quite unfit for it at present; B estates were the worst class, and would probably remain bad no matter what the Board did for them; for this reason the Board had rather avoided the purchase of B in remote districts, 59822-4, 59826, 59828, 59835, 59837-41, 59848-9, 59961.—The standard of comfort of one-half the population of the congested districts could only be appreciably raised by the provision of industrial employment, 59827.—All maritime districts were of Class B, and the development of fishing would keep these. Even if this could not be done to a satisfactory extent, the conditions of life of the population could be much ameliorated, 59827.—Few would probably argue that emigration should be facilitated (though a large number of people would be willing to go), but if the peasants were given decent homes with turbary for fuel, grazing for a couple of cows, and space for fowls, they would, though poor, lead good and happy lives, and would be a valuable asset to Ireland if she could employ them as labourers; if not they would be useful as migratory labourers, 59849-50.—In this last case the conditions under which they travelled and their housing in England should be supervised, 59852.—Lands should be striped and money freely spent on improving houses, as nothing seemed to have a more elevating effect on the habits of a peasant's family than the possession of a good house and surroundings, 59828.—The Board only put up new houses for the people they moved in striping, the peasants themselves building four times as many houses with grants given under the Houses Improvements Scheme and the Parish Committee Schemes, 59842.—

DORAN, Mr. HENRY—*continued.*

Smaller sums were given for substantial improvements to existing houses, carried out in accordance with the Board's specifications, and sometimes a sum was added to the sale price of the holding and repaid in the annuity; buying an estate to stripe, improve, and re-sell to the tenants would by no means make future migration more difficult; the vacated holdings could easily be amalgamated with the adjoining striped holdings; in such cases the better house was always chosen for retention, 59842-5, 59851-2.

ADVANTAGES OF INCREASED MIGRATION; COST TO BE BORNE BY THE STATE, PROPOSED.

The more migration work done by the Board the more radical and effective was their treatment; the country really received good value for the expenditure involved as compared with the loss entailed by treating estates without substantially improving them. A special grant should be given by the State to meet the loss on increased migration; at present the only portion of the Board's funds not derived from Irish sources was the annual Parliamentary Grant of £20,000, 59765-8.

PURCHASE OF ONE-THIRD UNTENANTED LAND PROPOSED; INCREASED LOSS WHICH WOULD BE ENTAILED.

Witness recommended that Class C should in future comprise one-third of the estates purchased, 59632.—Then the loss, calculated in the same proportion as it had actually been on this class, would, roughly speaking, raise the loss on the entire group of estates from 12·9 to 17·2 per cent., because untenanted land cost most to try and prepare for migrants, 59632.—If congestion were only to be relieved by enlargement of holdings, a large amount of grass land should have to be bought in order to assist the worst estates, 59645, 59648-50, 59688-92, 59705, 59781.—C was only a loss, because it was needed for A and B, and as a matter of account the actual loss could be debited to the estates benefited, 59640-4.—Class C should be used chiefly for the amelioration of A, as more satisfactory results would be obtained there than in B, 59835-7, 59846-7.

COST OF MIGRATION; CONSIDERATIONS AFFECTING QUESTION OF FUTURE LOSS.

The tenants in these groups had all paid at least two years' full rent, and the untenanted land had been sold at the average price paid by the Board, viz., twenty-seven years' purchase of the estimated annual value, or 29·5 years' purchase of the poor-law valuation, 59692, 59798.—This last was misleading as a standard of value, because a bog valued at 3*d.* might be bought cheap at £4 per acre if situated near a densely populated district. If the Board were to charge the same interest as the Estates Commissioners, and the revenue of the land while on hands were substantially reduced, the 17·2 per cent. loss would be increased in proportion, 59796-804, 59856-9, 60026-7.—The goodwill of his old holding was credited to a migrant in the price of his new holding, he paying the twenty-seven years purchase only for the extra amount of land acquired *plus* something for the new buildings erected. (The minimum desirable accommodation for a family cost £110, the annual value of the new land being seldom less than £15. This would, roughly, represent a capital sum of £40, while the Board, having spent, say, £120 on buildings, would lose £80 on the transaction). The occupation interest of the vacated holding would be charged to the incoming tenant *plus* the fee-simple. If the house was not of much value, little or nothing was allowed for it. A bad house was knocked down, but if fairly good, the new occupier paid a separate rent for it, while his old house was, if necessary, demolished, 59620-32, 59769-73.—Though migration had before entailed an average loss of only 25 or 26 per cent., it was not likely in future to be less than 30 per cent. The cost price at twenty-seven years of the estimated fair value of a £15 holding was £405. The cost of buildings, as the Board knew by experience, had risen to £130, that of roads to £20, and of fences to £20 owing to scarcity of labour, making the total cost £575. Calculating the sale price on an annuity of 85 per cent. of the £15 annual value, *i.e.*, £12 16*s.*, the total cost was £294, entailing a loss of £181. By deducting the average value of the occupation interest of the vacated holding —viz., £35—the loss was reduced to £146, and still further to £94, or 23·2 per cent., if a £2 rent were paid for buildings, making the gross fair rent £17, 59761-4, 59768, 59781, 59948-9, 59968, 60003.—The annuity of a migrant's holding should not exceed 85 per cent. of the fair letting value, including buildings, and it would be better if these could be excluded. This could not be done without increased loss, unless bigger men would migrate. The larger the occupation interest of the vacated holding, the smaller the loss involved. Moreover small surrendered holdings allowed but a small enlargement of adjacent holdings. It was, however, doubtful, judging by recent experience, if bigger men would migrate, and there were not many of them in Class A. The acquisition of an adequate amount of grass land near the estate treated would lessen the difficulty, but the effect of the migration of larger men would probably not counterbalance the loss entailed by the increased cost of labour, 59710, 59764, 59768, 59965-72.

INCREASED LOSS TO BE ANTICIPATED IF TOO HIGH A PRICE WERE PAID FOR THE OCCUPATION INTEREST IN UNTENANTED LAND.

It seemed likely that the Board would seek to acquire a far larger proportion of non-residential tenanted holdings than hitherto; if they had to pay more for these than for land in the owner's possession they would not be able to sell the holdings created at annuities not exceeding the 85 per cent. of the fair rent without incurring a far larger loss than the 30 per cent. of the cost price of the land alone of the migrant's holding; there seemed no real reason why a larger price should be paid for land jointly owned by two persons (tenant and landlord) than for land occupied by one, 59710.—The land was valued on an estimate of the revenue it was capable of yielding when properly managed, and the buildings were valued separately; the number of owners had nothing to do with the question, 59715-6.—Untenanted land sometimes fetched an excessive price in the open market when the State provided money for the purchase of the fee-simple; otherwise not; in any case a prudent buyer would have regard to the instability of a competitive rental; grazing rents in Mayo and Roscommon had fallen considerably, so that the undivided interest was not so valuable as might appear, 59710-41, 59856-7, 60026-7.

EXPENSES WHICH SHOULD BE CHARGED TO ADMINISTRATION.

It should be pointed out that the loss on estates bought under the Act of 1903 included cost of surveyors, paymasters, and clerks of works. The Estates Commissioners charged all such expenses, except the wages of gangers, to administration, to be included in the vote for the Land Commission, and the Board should do likewise, 59859-61.

REDUCTION IN PERCENTAGE OF LOSS IF BOARD'S AREA OF OPERATIONS WERE TO INCLUDE THE WHOLE OF THE CONGESTED DISTRICTS COUNTIES.

The Board, acting on a right principle, had bought only estates needing treatment. Probably about one-fourth of the land in Connaught—*i.e.*, estates and sections of estates—could be passed for direct sale, and if these were included in the area of the Board's operations the percentage of loss would be reduced by perhaps one-fourth; also the proportions of A, B, and C would be changed, 59403-9, 59412, 59636, 59644-68, 59683 59861, 59863, 59942, 59946-7. —The remaining three-fourths did not include any estates on the verge of being economic, though there were some in Class A which had not needed much treatment—*e.g.*, the Colles-Sandes Estate, costing £71,000, on which the loss had only been 2·8 per cent. If, which was unlikely, there should prove to

DORAN, Mr. HENRY—*continued.*

be a larger proportion of such estates in A the percentage of loss on the entire would be reduced. This would, however, be counterbalanced to some extent by the increased expenditure on estates like Lord Dillon's, 59677-82, 59684-5, 59947.

PROPORTION IN WHICH THE THREE CLASSES OF ESTATES SHOULD BE BOUGHT IF THE BOARD WERE TO DEAL WITH £1,000,000 WORTH OF LAND ANNUALLY.

If the Board dealt yearly with £1,000,000 worth of land, of which one-third were of C Class and one-tenth of B Class, the loss on the two, counted as 30 and 20 per cent. respectively, would be £120,000; if the total loss were limited to this sum 75 per cent. of A, tenanted estates, would have to be dealt with without any loss. The limit, however, should be at least 15 per cent. to allow for a loss of 5 or 6 per cent. on A. This last figure had been brought down from 9 per cent. because if the whole county were dealt with there would be a larger proportion of estates of better quality in A than was shown in the schedule, 59819-21, 59942-3, 59947.—In practice it would not be possible to preserve the exact proportions of A. B, C, though if, as seemed probable, as much as one-third of C could not be acquired, more of B could be bought, and in that way the loss on the gross output kept within a fixed average. This, however, was uncertain, for the Board should in future buy blocks of estates, and there might be an excess of A over B or of C over the others. If there were at any time an accumulation of B the purchase of A and C would have to cease for a while, and the output would be less. There should not be more than £1,000,000 worth of C in hand at any time. If the annual grant to be made to the Board were based on an average net loss it would be necessary to allow them a reasonable discretion in the selection and grouping of estates, so as to keep the total of the varying losses within the estimate. It would be objectionable to fix the grant on a varying percentage of loss; it would be preferable to have an annual grant fixed by a new Act placed at their disposal to be applied at their discretion, subject to the general understanding that they would sell annually about £1,000,000 worth of estates, 59705, 59819, 59829-32, 59855, 59861, 59883-91.—The Commission should make it perfectly clear in their recommendation that very variable losses were necessarily incurred in dealing with different classes of estates and that the percentage named by them was the average for all classes, so as to prevent people from clamouring for the average percentage of loss in the treatment of each estate, 59889-93.

POWER FOR THE BOARD TO EXCLUDE ESTATES OR PORTIONS OF ESTATES NOT REQUIRING TREATMENT.

It should rest with the Board to exclude from purchase estates or portions of estates which could be sold without special treatment, 59819, 59855.—They would have any large property offered them inspected, and if a substantial portion either did not need or was incapable of improvement, it should be certified as a separate estate to be sold direct (as its purchase by the Board would lead to great dissatisfaction, and hamper the work of reform on other properties), 59412-3, 59415.—Landlords and tenants would probably easily come to terms over the good part of the estate when they understood the reason for splitting up the property. Tenants would not wish their holdings to be bought by the Board and held for a couple of years when no money would be spent on them eventually, 59145, 59438.—In the few cases where landlords and tenants had come to terms before approaching the Board the difficulty of dealing with estates had been increased. There was a general desire amongst West of Ireland landlords to do it, and tenants were so anxious for the Board to buy and improve that they agreed to give too high a price. The landlord should first notify the Board of his intention to sell, whereupon the Board would inspect, and in many cases would be able at once to declare the estate one which could be sold direct. The Board would not arrange the price, but the landlord would negotiate direct as at present, 59432-6, 59456, 59468-9, 59480-1.—If inspection showed that a portion needed treatment the Board should not tell the landlord to arrange as he could with his tenants about it, for many estates were mortgaged or liable to family charges on the entire. The two sections should be declared simultaneously—one to be bought by the Board, the other direct—at a price arranged before the issue of the certificate, 59429, 59432-7, 59440, 59455-6, 59460, 59468-9, 59491-2.—There would be no difficulty about inspection, but it must take place before the question of splitting up an estate could be determined, 59474.

MAPS REQUIRED.

A landlord proposing to sell to the Board would have to lodge a map showing the actual holdings, as he had to do now for the Estates Commissioners. At present the Board only required him to show the boundary of his tenanted and untenanted land. Several properties were in such a state of rundale that only highly-skilled surveyors could have mapped them out extensively, and this would have meant considerable expense, 59417, 60246.

EFFECT ON PRICE OF SEPARATION OF ESTATE INTO TWO PORTIONS.

A bargain such as that contemplated above should not affect the total price. The land excluded from treatment should always be sold higher than the other, and though owners might ask too much, tenants were able to form a standard of prices, 59418-21.—Negotiations should be subsequent to inspection, but in any case the Board would not be justified in refusing a certificate, though compulsory powers should be used later if necessary; it was for the Estates Commissioners to approve the price in cases of direct sale, and to have the non-zone cases inspected; the Board's inspector could, when inspecting ascertain what the tenants were prepared to give, and could then, if invited by both parties, act as a friendly negotiator in regard to the direct sale; it would not be his duty to fix the price, but he might have to report that prices were such as the holdings were security for, or that they were within the zones, 59421-2, 59429-30, 59437, 59482, 59493-4.—It would probably be advisable not to issue the certificate until the price had been arranged for both sections of the estate; the aggregate price might be settled if the Board were not obliged to buy the good section, 59427-8, 59442-4, 59501.

PROPORTION OF CONGESTION WHICH SHOULD EXCLUDE AN ESTATE OR PORTION OF AN ESTATE FROM DIRECT SALE.

It would not be desirable to fix any proportion of congestion which would decide the Board to withhold the certificate; if ten out of a hundred tenants needed holdings rearranged they should be dealt with; any part of the estate not needing treatment should be excluded from purchase, or, in a case like the above, there would be a large transaction for small results; an estate with four or five scattered holdings needing improvement should pass direct; on a mixed estate the holdings were usually clustered together, and such a section with four or five tenants should be scheduled as congested, and treated; the Board could do this, and lose the ten per cent.; at present, though such a townland went through the agency of the Estates Commissioners, it did not actually pass into their possession, 59483-8, 59503-6.

POWERS OF THE BOARD IN REGARD TO DIRECT SALES. BOARD SHOULD HAVE SAME POWERS AS ESTATES COMMISSIONERS.

Most landlords would probably, if they could, make the sale conditional on the entire estate being bought. The Board would risk nothing by doing this, but their administration would be encumbered, and there would be delay and expense, 59445-51, 59502, 59507.—It was possible to fit part of an estate for sale more quickly than the rest, but the Board could not sell land until

DORAN, Mr. HENRY—*continued.*

they had paid for it. This difficulty could be met by giving the Board the same powers as were conferred on the Estates Commissioners by Section 6 of Act of 1903, when part of an estate was to be sold direct, of having the sale agreements executed by landlord and tenants, the Estates Commissioners being responsible for the total price agreed upon. The inspector might arrange that a certain number of tenants should buy direct at, say, £10,000, while the Board should buy the rest at, say, £40,000; if the landlord agreed he would receive both sums, in each case *plus* the bonus, the Board securing that the tenants would agree to, and pay, the price. This would be easy in practice, and on further consideration, witness believed it would be the best plan. First the Board would value, and after negotiating with the tenants, make up the gross price, asking the landlord to accept it on condition that three-fourths of the tenants signed undertakings to pay the prices making up the offer. Tenants whose holdings were not to be improved were always willing to buy without delay, 59458-60, 59472-3, 59489, 59503, 59506, 59514-6, 59525, 59864-8, 59875, 60241-2.—Economic and uneconomic holdings running side by side would sometimes have to be dealt with together in order to carry out drainage, road-making, and the apportionment of turbary. There might be a bog centre affecting the whole estate, and the plan sketched out above had been suggested as a solution of this difficulty, 59411, 59494-8, 59500-1.—The Estates Commissioners' practice was to make all tenants sign agreements, even those whose holdings were to be affected, but the Board would not do this; if a man with surplus turbary signed an agreement to buy his holding without any reservation he would not allow that turbary to be allotted to other tenants, 59865, 59876-82. —If the owner of an estate needing treatment in any portion were dissatisfied with the gross price it would be the Board's duty to buy the whole property compulsorily. Estates with grass lands should be included in the above category, 59499, 59869-74.—Making Section 6 of Act of 1903 applicable to the Board would encumber their administration to some extent, but the only expense involved would be that now incurred by the Estates Commissioners in regard to the preparation and lodging of maps and agreements in cases of direct sale. The State would lose nothing, as the money for estates to be passed direct would have to come from the Land Purchase Fund, no matter who was the purchasing authority, 59448-51, 59508-12, 59554-7.—The undertakings might still be lodged with the Estates Commissioners, who in any case would have to deal eventually with the vesting. They would inspect as to boundaries and security of non-zone holdings on the normal section, as they now did on the whole of an estate. The Board's responsibility would end when the agreements had been obtained from vendor and tenants, these being subject, as in all cases of direct sale, to the approval of the Estates Commissioners. At present the Board's valuers were not from the Land Commission, except in respect of untenanted lands and holdings not subject to judicial tenancies, and then they only inspected for occupation. If, however, the Board employed them in the first instance a firm offer could be made to the landlord, for the Estates Commissioners probably could not offer the price unless the zone limits were abolished. The judgment of the Land Commission valuers should in any case be accepted as final, as it would be based on practical knowledge, whereas the Estates Commissioners would not have seen the holding in question, 59529-39, 59541-6.—No matter what was done estates needing treatment would have to be separated from others by somebody, 59548.

Guarantee Question.

The Board up to the present had been obliged to guarantee against default of annuities on all the sales. That guarantee should not be applied to the larger volume of work proposed, because, being an accumulating liability, it would seriously affect the Board's position in a few years, 59540-1.

Cost of Inspection under proposed New Scheme.

Witness believed inspection cost a good deal in scattered cases, but £10,000 would probably well cover the outlay which the Board would have to meet under the scheme suggested, 59536, 59557-9.—Transactions in regard to direct sales should not be included in the £1,000,000 which had been proposed as the Board's income for land purchase, or it would take about 25 years to pass the 17 to 30 millions worth of property to be dealt with, 59454, 59507, 59513, 59517-20, 59547, 59549-52.

It should be possible to exceed £1,000,000 a year in exceptional cases.

In any case it would be well if legislation were to provide for dealing with a larger output of estates needing treatment when the owners willing to sell and the tenants willing to buy represented property of value in excess of the proposed million a year. Otherwise there would probably be great dissatisfaction over the delay which would necessarily be in curred over the transfer of property, 59855.

Amount of Land which the Board should have in hands in order to turn out a million's Worth Annually.

If the Board turned out a million's worth of land a year they should hold nearly three millions' worth. The tenanted land would, on an average, be under treatment for two years. They should if possible have about a million's worth of untenanted land, as stock in hands, so as to give migrants a larger choice, only selling and buying one-third each year, 60008-10.

Means of obtaining Information as to Amount of Grass Lands available.

The only information of any value which could be obtained as to the amount of grass land available for migration had already been furnished to the Commission under the heading "Non-residential Holdings."* As to the number of years it would take to absorb all the grass lands of the eight counties, the estimate supplied by witness gave full information. It was an outside estimate, giving the poor law valuation and the acreage, 59773-6, 60004-7.

Re-organisation of Staff Required—Cost, &c.

The present outdoor staff cost between £18,000 and £20,000; the indoor staff £9,000 or £10,000, the total cost, including office expenses, being £31,000 or £32,000. The staff, now up to its full strength, would be able to deal with about £300,000 worth of property per year if in future they were allowed to proceed without interruption and delay. The amount of additional land which it was proposed to deal with would not proportionately increase the amount of work which would be done by the superior officers, but the staff should be reorganised; the outdoor staff should be trebled, because land should be turned out more rapidly, and much time would be taken up inspecting estates and negotiating for purchase. From £50,000 to £60,000 would be needed, including expenses of clerks of works, surveyors, and inspectors, now charged to estates. The indoor staff would not need a proportionate increase, 60011-23, 60052-5.—The staff should be reorganised. Instead of four inspectors and five assistants there should be nine inspectors—one in each county or other defined area; in some counties two would probably be needed. The inspector's duty would be to do in his district very much what witness tried to do over the whole area. there would be a chief inspector to supervise the others, and each of these last would direct and train men to carry out the detailed work, 60027-9, 60055-6. —An enormous staff would not be required for splitting up an estate into one section which needed and one which did not need treatment. The revision of maps for the good portion would be a small matter; while the expense of mapping the other part would, as stated, fall on the landlord, 59417, 60242-6.

Procedure now followed by the Board in regard to Land Purchase.

Proposals to sell to the Board were always sent through the Secretary. Witness then submitted a short report to the Board as to the advisability or otherwise of buying. If the estate seemed suitable he asked authority to inspect it; then, having inspected and valued, classifying the rental and

* See pp. 48–9.

DORAN, Mr. HENRY—*continued.*

so forth, he reported to the Board, naming a maximum price they might offer, and giving an estimate as to the cost of re-arrangement; the offer if issued was prepared by the solicitor, and sent through the Secretary; the Board did not as a rule make a second offer. and their offer was always conditional on verification of the particulars supplied them; subsequent negotiations, up to the stage of purchase, were in the hands of witness and of his staff and assistants; the legal steps of the purchase were carried out by solicitors; meanwhile witness gave the Board a detailed estimate of the receipts and expenditure for the period from purchase to re-sale; witness could not exceed the limits laid down in the estimate and approved by the Board without authority from the Board; the work of re-arrangement was carried out by the Board's clerk of works and superintended by the inspectors and assistants, 60032-51.

Uncompleted Sales.

If the Board were to operate in congested areas now in the hands of the Estates Commissioners some difficulty would arise in regard to uncompleted sales. The Estates Commissioners might hand over all originating requests and applications in respect of such estates to the Board to deal with, the Board deciding whether to certify the properties as fit to be passed by direct sale. If the estate had not been declared by the Estates Commissioners no agreement would have been entered into with the tenants. The landlord however, might reasonably object to the Board's reviewing the price proposed for holdings not within the zone conditions, he having lodged an agreement on the understanding that the Estates Commissioners alone could fulfil that function, 60233-9.

Impending Revision of Bonus—Effect on Rate Sales to Estates Commissioners, the Board being restricted from Purchase pending Report of present Commission.

Anticipating a change in the bonus adverse to their interests, landlords were anxious to sell as quickly as possible, and to get on the list for the payment of purchase money; according to Mr. Callan's figures nearly one-half of the holdings in counties containing congestion were either sold or had been offered for sale, and probably a very large proportion of the remaining half would be offered to the Estates Commissioners within the next three or four months; a considerable area of the non-economic and intermixed holdings could then be vested, and the problem of dealing with vested congestion would be much enlarged. Several Mayo landlords had lately approached witness, only to be told that the Board was debarred from purchasing at present, 60247-9.—On receiving this answer, Lord Arran's agent had at once arranged with the tenants on the following terms:—All the untenanted land on the estate would be given to tenants or their sons; other estates containing untenanted lands would be sold on the same conditions, and these estates would be bought at once, as owners would get nearly their own price from tenants on such terms, 60253.—A landlord had no right to force such an agreement on the Estates Commissioners, but the tenants themselves would insist on having the land regardless of the law, 60255-6.—If the sales of estates continued and the Board were debarred from buying the idea of forming a new Congested Districts Board should be abandoned, 60257-8.

Withdrawal of all Power from Board and Estates Commissioners to give Land to Sons of Tenants proposed.

The Estates Commissioners had given fifteen out of seventeen new holdings near Castlerea to sons of tenants, 59911.—They had only done their duty under the Act of 1903, but their action made the work of migration on adjacent lands much more difficult both for themselves and for the Board, 59914.—Landholders openly stated that their sons had the first claim to holdings; the Estates Commissioners had given holdings near Castlerea to sons of tenants on the Dillon and De

DORAN, Mr. HENRY—*continued.*

Freyne Estates bought by the Board; the Board had only given four holdings to sons of tenants; the law should not only be altered in regard to the Estates Commissioners, but the Board's power of giving surplus land to sons of tenants should also be withdrawn, or it would be impossible to carry out migration on a large scale; at present the agitation which had arisen since the Act of 1903 was very effective in preventing people from migrating, but in face of it, the desire to migrate had increased; witness would not buy large blocks of land without knowing that the land acquired was passing satisfactorily to people who had surrendered land for the relief of congestion, 59908-33, 59977-8.

Re-sale by Tenant Purchasers—Pre-emption Question, &c.

The Board had done enough for their migrants, but they should be further helped by being given agricultural education and direction when put on their new holdings, 59853-5.—None of the Board's migrants had sold, and they were not likely to do so unless they failed from some cause, in which case a man ought to sell his interest; he would probably be replaced by a better man, and this would increase the security. The State was justified in losing so much in order to have a holding formed to be occupied by an industrious family for the benefit of the country, and in order to relieve congestion. It did not concern the State if a man sold within a month. A smaller loss would have been incurred by emigration, but no one advocated wholesale emigration as a desirable remedy for congestion, 59774-81.—It would not be unfair if the State refused to sanction a sale unless the loss previously entailed by migrating the holder were repaid, but there would be less inducement to migrate, 60003.—Legislation restricting an occupier from mortgaging his holding would not interfere with his credit, as this, in the case of a small holder, was largely regulated by his personal character and reputation. The proportion of small holdings sold for debts was very small, 60002.—When holdings in counties containing congested districts were put up for sale the Board should have the right of pre-emption, 60031.

Compulsory Powers Needed in order to Acquire Large Blocks of Land.

The ground for the claim for compulsory powers was based upon the necessity of the Board's dealing with large blocks of districts. Granted these powers, the Board should operate in all the counties at the same time. They would be regulated in their mode of starting by the particular district in which they started; and by the estates offered them at the beginning of their operations. There should be a list, say, of ten centres in Mayo, with ten resident officers, each of whom would begin with one estate, widening the field of operations until the whole country was covered. When the Board began working in a centre where the landlord had offered to sell, and they made no trouble, conditions being favourable, the adjoining landlords almost invariably offered, and the area was gradually enlarged. Landlords seldom objected to a discreet inquiry as to their willingness to sell. Compulsion should not be resorted to hastily, and should only be used when a landlord refused to sell an estate either tenanted or untenanted which it was desirable to acquire. Satisfactory progress would probably be made in negotiations if the Board proceeded quietly, 59951-6.

Price required to give Landlord his Net Income—Effect of Rate of Interest.

The Board since 1903 had paid 27½ years' purchase for grass land. This price, *plus* the bonus, would not give a man his net income on the 3½ per cent. basis. To do this it might be necessary to give as much as 35 years' purchase of the agricultural rent of the very good grass lands, because the rents obtainable for this for accommodation purposes were far in excess of their agricultural value. This, the very best land, was the last which the Board would

DORAN, Mr. HENRY—*continued.*

seek to acquire, or if they did buy it they would keep it for grazing, as it was much needed for this purpose in poor districts. In this case it would probably return what had been given for it. The Board's operations would diminish the demand as well as the supply of this land, for if the poorer land were taken from graziers they would no longer want grass lands for accommodation purposes, 59783-97, 59804-7.—No landlord would refuse to exchange his income from untenanted land for an investment at four per cent., as it could be proved that the majority of grazing rents in the West of Ireland had fallen considerably in the last twenty years, 59741, 59808.—Inferior land had deteriorated largely because store cattle had been fed on it continuously, while no manure had been put into it; the very best land had suffered least, but all kinds of grass lands had depreciated very much; for the last ten years not so much, and for the last five years still less. In several places the grazing rental had been stationary, but there had been no rise; a truer test of the letting value of grass lands would be furnished by the last five than by the last ten years, 59808-18.

Powers of Pre-emption, Resumption, Determining Future Tenancies, &c.

The Board had sometimes acquired tenanted holdings by voluntary agreement; sometimes they had served notice to pre-empt, having been advised in several cases to pay the excessive prices offered when inquiry had shown the intending purchaser to be a *bona fide* one; a tenant holding under a judicial tenancy could not complete the sale of the tenant-right without first serving the landlord with a notice of his intention to sell and of the terms of sale. Holdings were not often sold by auction; the landlord would make an offer, and if he and the tenant failed to come to terms the Land Commission, after hearing both sides, would fix the price at which the landlord would pre-empt; in cases of resumption by the Board the prices had usually been arranged without going before the Land Commission, though in a few cases they had had to go into court, 59742-5.—An ordinary landlord could not resume possession of holdings for the enlargement of his demesne or for taking sites for the extension of a town; while the Act of 1903 empowered the Board to do so for the purpose of migration and the enlargement of holdings, as well as for the purposes above specified in the Act of 1881, 59747.—Witness did not think the Estates Commissioners had the Board's extended powers of resumption. Notice for resumption might be served at any time, and a year's notice was not necessary, as it usually was in the case of determining a future tenancy. Any landlord could do that by serving notice to quit, and the Board had done so in several cases, but had had to give compensation in accordance with the scale laid down by the Act of 1881. This was fixed according to the rent payable and the number of years' purchase the tenant was to get for disturbance, 59751-3.—He was also paid for the unexhausted value of his improvements; this was always settled by the County Court Judge; there had evidently been some mistake in the drafting of the Act, for the Board had no power of resuming possession of a present yearly tenancy. They had first to serve notice on the tenant to have a fair rent fixed, and then serve the resumption notice. There had lately been several such cases, 59759-61.

Maintenance of Improvements.

The Board had spent a great deal on main drainage and accommodation roads with most satisfactory results, but as there was no provision for the maintenance of these drains and roads, they would probably before twenty years be almost as bad as before, 59980.—The Board never made either a drain or a road for the benefit of one holding. The County or District Council should be made responsible for the maintenance of the arterial drainage, with power to levy a rate on the holdings benefited. It was very important that there should be a central official authority to make the County Councils do their duty in this respect, 59984-5.—The Board had contributed thousands of

DORAN, Mr. HENRY—*continued.*

pounds towards roads which could not be dealt with by the county, but they had also made many accommodation roads for access to detached parts of holdings, bogs, etc., and it would not be fair to require the people who did not use these roads to pay for them. Possibly the Department of Agriculture could make some small contribution towards the upkeep of these roads in the interests of agricultural development, 59991-3, 59999.—The new Board should have compulsory powers to call on the people accommodated by a particular road to repair it if necessary, and in the event of their failing to do this, to make a levy for the cost of having it put into proper condition. There was not much danger of houses being allowed to go out of repair, 60001.

Improvement of Houses: Board's Houses—Improvements Scheme did not Overlap Work of Commission.

The purchase of land in blocks would not do away with the need for Parish Committees, because the Board would wish to deal with estates quickly in two or three years, and they could not in that time ensure all the houses being improved. The conditions which the Board while dealing with an estate offered for the improvement of the houses were far more favourable than those offered by the Parish Committees, and though a fair number of people took advantage of this, very many could not be induced to carry out desirable improvements while the Board could employ them at full wages, 59895-902.—They were engaged when at home in road-making and drainage in the summer, and at fencing, etc., in the winter. In spite of the Board's efforts a very large proportion of bad houses remained on many estates, 59905.—In the idle time of the year people worked under the Parish Committee schemes, and the House Improvement scheme in most of the poor districts was too slow to allow of its being withdrawn on sale of the estate. No one with a holding on an estate being treated by the Board could get a grant under the schemes, so there was no over-lapping. In any case the Parish Committee's work extended over the whole congested area, and was not confined to estates bought by the Board, 59905-7.

MITCHELL, Mr. F. W. D.

See pp. 36-9.

Cost of Administration.

The cost of the Board's administration, including estates, fisheries and everything, amounted for the present year to £36,000. The share of this attributable to the estates business was about £25,000, made up as follows:—Outdoor staff and expenses = about £10,000; indoor staff and office expenses = (roughly estimated), £12,100; law staff and expenses = £4,000. This last figure was unusually high, due to some of the charges for previous years having been paid this year; the normal amount would be at least £2,500, 60259-70, 60296, 60300.

Proposed Increase in Staff, Additional Expenditure, etc.

In the Estates Branch there were 16 temporary clerks and witness proposed adding 16 more in order to deal with the trebled amount of work it was proposed to entrust to the Board. There was no reason to suppose that the other estates would be less trouble than those already treated; witness understood that estates to be passed for direct sale were not to be included in the million's worth of land on which expenditure was being calculated; the head of the branch was the only permanent civil servant; he was chief clerk and senior man in the office next to the Secretary and Assistant-Secretary and drew a salary of £500 a year. The salaries of the temporary clerks ranged from 25*s.* a week to £200 a year, 60264-75.—For the first few months they had 25*s.* a week, and if efficient, their salary was gradually increased. As a rule the maximum salary was about £150, but there were one or two temporary

MITCHELL, Mr. F. W. D.—*continued.*

clerks, who had been in the office 12 years or more, receiving £200. The clerical staff was paid at a lower rate in the aggregate than any department of the Civil Service in Ireland. It had not been proposed to increase the salaries; they had been estimated at £100 a year each, which would allow for some increments. The temporary clerks would like to be made permanent civil servants and given the right to pensions, 60276-9.—There would be an increase in the collection of rents corresponding to the increased number of estates it was proposed to deal with. The Land Commission did not collect the annuities until the holdings had been re-sold. There was an officer in charge of the rent branch of the outdoor staff, with a salary between £300 and £400, and a third-class clerk receiving £172. There were eleven temporary clerks, and witness proposed to add eleven more. The accounts branch did work in addition to that connected with estates. The present staff consisted of a bookkeeper, at from £350 to £400, two third-class clerks, one with £180, and one with £95, and eleven other clerks. Witness suggested adding twelve temporary clerks, involving an additional expenditure of £1,200 in salaries, 60287-91.—The correspondence branch and the stores branch should also be considerably increased. The work of the former was chiefly in connection with estates. The aggregate increase needed would be £14,600. This would cover the cost of office maintenance, printing, stationery, postage and telegrams. To this something should be added in order to increase the salaries of the men holding office, as an enlarged staff would entail more work. Then there were about half-a-dozen heads of branches who would naturally expect higher salaries for the same reason, 60291-95. —After consulting with Mr. O'Connor, witness had decided that the present law staff expenditure should be raised to £6,500. Experience had shown the advisability of making a rather liberal estimate, but £500 might be taken off and spent in increasing the above-mentioned salaries, 60296-304.

Amount of Interest paid by the Board, Loans would be needed.

The Board were now paying an abnormal amount of interest—£9,000 on their estimate for the current year—chiefly because they had not yet repaid a sum of nearly £50,000, and this year they were paying instalments as well as interest. The above sum had been borrowed from the Board of Works, with the consent of the Treasury, out of the local loans fund, on the security of the Church Surplus Grant, for the improvement of estates, and to some extent also for other purposes, *e.g.*, Raiffeisen banks, agricultural loans and loans to tenants. If the Board had 3 millions' worth of property in hands it would be fair to assume that the amount they could borrow from the Board of Works would be £200,000—the enhanced value recoverable on that amount of land. Under the Treasury rules they could not borrow more than they would probably be able to recover out of the expenditure. The estimate had been based on past experience. The Board had no fund from which they could draw in order to meet the heavy expenditure entailed by estates when in hands. When they re-sold they could only recover a small portion of the outlay, losing the balance and the interest, 60305-12. —In cases of emergency, the Board had a statutory right under the Act of 1891 to draw a portion of the Church Surplus Grant of £1,500,000 if the Treasury approved. It would be quite allowable and doubtless advisable if this were done in the present circumstances, but it might be objectionable to borrow any large part of a sum of money which the Board had given as security. A considerable sum had been guaranteed to cover the purchase by tenant-purchasers in the Board's area, but since the last Act the whole sum was not in the contingent guarantee. The Treasury might, however, help in another way, viz., by giving a loan from the Board of Works. Borrowing from the Grant would mean paying interest at the rate of 2¾ instead of 3½ per cent. A great emergency had arisen, and if it were known that the Treasury would not advance the £25,000 asked for in the estimate, Mr. Doran should be wired to immediately to stop all the work being done on estates, as the Board would be bankrupt at the end of the month, 60313-33.

MITCHELL, Mr. F. W. D.—*continued.*

Floating Capital which would be needed.

Mr. Doran assumed that there would continue to be delay in recovering the proceeds of estates on resale, and the Board would need some floating capital to tide them over this interval. Hitherto they had accumulated some floating capital by saving, but it had been insufficient, and there would be a £40,000 deficit at the end of this year. If Parliament gave the Board a sufficiently large income they might be able to save enough the first year to provide a floating capital. They had a surplus every year on their estimates. They never exceeded their income and had several times stopped Mr. Doran's work in order to avoid a deficit. The Board's work had been increasing too fast for their means; even if they had a surplus they would not have to surrender it to the Government, as did other departments. They only submitted their accounts to obtain the formal sanction of the Treasury, 60333-44.

Loss on Estates.

The adoption of Mr. Doran's proposal that the cost of Clerks of Works and Surveyors should in future be charged to administration, would, roughly speaking, bring his estimated loss on estates down to £125,000, *i.e.*, to 12½ instead of 15 per cent., 60345-9.

Proposed Increased Expenditure on Parish Committees.

It had been suggested that the Board would like to increase the number and enlarge the grants of Parish Committees, raising the total expenditure in this direction from £12,000 to £20,000. If all Connaught were scheduled the Board would have to refuse to listen to the applications for grants, with which they would be besieged, 60356-9.—No allowance had been made in the estimate for agricultural development, and only 50 per cent. had been added, on a rough guess, for industrial development. When the Board had helped Foxford so liberally they had had plenty of funds, but since then they had not the means to encourage any such project, 60364-9.

Expenditure on Fisheries.

The gross expenditure, direct and indirect, on fishing during the previous year—a normal one—had been £40,000, out of which £26,000 had been recovered. There should be more officers, and the Board should spend more on piers and perhaps on boats. They were now paying £3,900 for steamer services, £3,000 of which was the cost of the *Granuaile*. Witness had assumed in his estimate that the Board would not revive subsidies which had been withdrawn, although they might do this if they had the means, 60379-86.

Transfer of Agricultural Work from the Board to the Department.

The Board would never have consented to the transfer of the agricultural work to the Department had they known that what they had been carrying on at a cost of £11,000 was to be practically extinguished by being reduced to £2,000. Parliament should have given a further grant, but the Department should not have accepted the transfer until they had the necessary money. Witness believed they were now expending up to £10,000, 60370-8.—Witness had no authority for his estimate; he merely wished to help the Commission to judge how Mr. Doran's proposals would work in with the income; the figures had been made up hastily, 60359, 60386.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

MINUTES OF EVIDENCE.

ONE HUNDREDTH AND FOURTEENTH PUBLIC SITTING.

WEDNESDAY, JANUARY 22ND, 1908.

AT 11 O'CLOCK A.M.

In Westminster Palace Hotel, London.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir ANTONY MACDONNELL, G.C.S.I.; The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; JOHN ANNAN BRYCE, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. HENRY DORAN recalled and re-examined.*

Jan. 22, 1908.

Mr. Henry Doran.

59394. CHAIRMAN.—We are anxious, Mr. Doran, to obtain from you some further evidence with reference to the probable loss that would be incurred in dealing with estates which need treatment in the counties containing congested districts?—The Secretary having informed me that the Commission desired to obtain some further evidence from me as to the probable loss that would be incurred in dealing with estates that needed treatment in the counties containing congested districts, I have prepared particulars of the actual loss incurred by the Board in the treatment of estates purchased under the Irish Land Act, 1903, and which since then have either been sold or are now ready for sale.

59395. Sir FRANCIS MOWATT.—Have all these estates needed treatment?—Yes, but they differed considerably.

59396. All of them have needed treatment?—Yes. These are estates that were purchased under the Act——

59397. CHAIRMAN.—In order to make it quite clear would you tell me does this memorandum of yours† include only the estates which have needed treatment, or does it include all the estates purchased under the Act of 1903?—It includes only so many of the estates purchased under the Act of 1903 as have been actually prepared for sale.

59398. And treated?—And treated.

59399. Have there been, as Sir Francis asks, other estates which the Board have purchased which have not required any treatment?—There have been no such estates.

59400. There are no, what you might call, good estates to set off against these estates which required treatment?—These estates were made up of grass lands, poor tenanted estates, and very poor tenanted estates.

59401. Most Rev. Dr. O'DONNELL.—It was contemplated as a possible arrangement that estates should be sold to the tenants on a certificate from the Congested Districts Board, that they might pass. No such estates as those have come into the categories that are here put down in your paper?—No.

59402. These are estates that required treatment? That required very substantial treatment.

59403. Sir JOHN COLOMB.—As a matter of fact, I assume that the policy of the Board has been to purchase only estates that required treatment, or estates which, by reason of having untenanted land, lent themselves to the treatment of congested estates?—They have not bought any other class of estates.

59404. Most Rev. Dr. O'DONNELL.—Did not the Board seek on one hand untenanted land, and on the other the poorest class of untenanted estates?—Not quite the poorest, but poor estates. The Board have not up to the present purchased any tenanted estates, except those that needed substantial treatment, and untenanted land, or an estate which was partly tenanted and partly untenanted.

Most Rev. Dr. O'DONNELL.—That elucidates the point.

59405. Mr. SUTHERLAND.—Now, is there any likelihood of their acquiring any estates that do not require any treatment, or that they would not require for the treatment of other estates?—No. I would not think so; I do not think they ought to buy such an estate. Perhaps I ought to explain, first of all, that the reason I submit particulars of this group of estates to the Commission is that in my opinion they are an average type of what will have to be dealt with by the Board, and that the Board have not carried out any works upon them that are not necessary. They have treated them as economically as estates of the kind could be treated while effecting substantial improvements upon them. Consequently I submit that the results of the operations on these estates afford about the safest information that is available for you to form an opinion of the net loss in the treatment of similar estates.

59406. Mr. BRYCE.—Before you leave this part of the subject, suppose that the Commissioners were to recommend that the whole of Connaught should, for buying purposes, be put under the Congested Districts Board, are there not estates in Connaught—I don't mean merely in the present congested districts counties, but in Connaught—which might require no treatment?—There are several.

59407. Only so far you have not acquired any?—The Board have always declined to buy such estates.

59408. There are not very many of these estates?—I assume that they would be about one-fourth of the unsold estates.

59409. These would require no treatment?—No. It is only a rough estimate, in fact, a guess.

Sir ANTONY MACDONNELL.—We have in the statistics that assuming that the holdings now being dealt with by the Estates Commissioners are excluded from the operations of the Board, there are 30,000 holdings over £10 valuation. Of these 30,000 holdings only a comparatively small number, as I understood, would be dealt with by the Board.

* For former examinations, see Appendix to the First Report of the Commission [Cd. 3267, 1906], p. 75; Appendix to the Eighth Report [Cd. 3889, 1907], p. 13; Appendix to the Ninth Report [Cd. 3845, 1908], p. 74; and Appendix to the Tenth Report [Cd. 4007, 1908], p. 232.

† See p. 41.

Jan. 22, 1908.

Mr. Henry Doran.

59410. Most Rev. Dr. O'DONNELL.—I think Mr. Doran was making his calculation rather by estates than by holdings —That about one-fourth of the estates would pass without improvement.

Sir ANTONY MACDONNELL.—We had these figures from Mr. Callan. He stated that there were 80,000 holdings under £10 valuation, and that there were 30,000 holdings over £10 valuation not dealt with, that is, excluding the holdings now being dealt with by the Estates Commissioners. Of the 30,000 holdings perhaps 5,000, it was suggested, might come under the Board's treatment, leaving 25,000 holdings which would be sold under the ordinary law.

Sir JOHN COLOMB.—I think it is given as 84,954, of which 74,000 do not exceed £10 valuation.

Sir ANTONY MACDONNELL.—You are referring to the scheduled districts: I am talking of the larger area.

59411. Most Rev. Dr. O'DONNELL.—When you say that one-fourth might pass without treatment by the Board, I take it that you meant that the Board would be able to declare portions of a large estate a separate estate, so as to allow those separate portions to pass unimproved, while the Board would improve the remainder?—That is so. I don't think you can go by holdings, for the reason that you will always find holdings that do not require treatment adjoining holdings that do require treatment in the same townland. You cannot exclude those, because if you do you very often would not be able to carry out land improvement work such as drainage, road-making, and the apportionment of the turbary. If you exclude all holdings that you do not want to spend money on you would very often make it impossible to carry out drainage works, road-making, and the apportionment of turbary.

59412. When you calculate, roughly, that one-fourth of these properties might pass to the tenants unimproved, I take that one-fourth to comprise entire estates and portions of other estates, that, by such a body as the Congested Districts Board, might be declared estates capable of passing without improvement?—Yes. That is it. My idea is this: that if the Board were offered a large estate we would have it examined, first, by an inspector, with a view to seeing if there are substantial portions of it that do not need treatment, or tenanted holdings upon it that cannot be enlarged, no land being available. I would think that there would be no object in the Board purchasing such a section of an estate if it did not need improvement, or if they are not in a position to improve it in any way, either by the enlargement or the re-arrangement of holdings; and it would appear desirable to make a separate estate of such a portion, and let it pass direct from landlord to the purchasers. It would be objectionable for the Board to purchase and hold an estate upon which they did not intend to carry out any substantial improvement. Such action would certainly lead to great dissatisfaction, and would make the work of the Board on estates that needed radical treatment much more difficult.

59413. CHAIRMAN.—Your view is that where an estate exists that does not need improvements the Board could, by granting a certificate, allow that estate to pass in the ordinary manner from landlord to tenant?—Yes; and should do so in respect of every estate, or every portion of an estate, that they were not in a position substantially to improve, or that does not need improvement.

59414. Sir FRANCIS MOWATT.—In the percentages of loss which you have given here you have included the parts of these estates that required no treatment?—Yes, but they are mostly scattered holdings.

59415. Mr. KAVANAGH.—Would you contemplate giving a certificate to a landlord for one portion of his estate and not for the other portion?—What I contemplate doing is that on an examination of the estate it might be found that there was half or quarter of it, or even a townland, that was not connected with the development of that estate or the adjacent estates —those must also be kept in view in connection with drainage and road making—then any such portion of an estate, even to a townland, upon which the Board could do no good by purchasing, should be made a separate estate, and the Board should buy the remainder of the estate direct.

59416. Do you think that there would not be any difficulty in the landlord and tenant coming to terms on the part for which you gave a certificate? What I mean is that I think it would be difficult to negotiate between landlord and tenant if portion of an estate was excluded?—If they understood the reasons for the splitting up of the estate I anticipate that they would always arrange terms.

57417. Sir ANTONY MACDONNELL.—Would not you require to have maps made of the estate that you would keep and of the estate that you would be disposed to release?—Yes. A vendor, on proposing to sell the estate to the Board, must lodge a map. At present he is only required to show the boundaries of the estate, and the boundary of the tenanted and untenanted land; but under the new procedure, such as you are discussing, I would say it would be necessary for a vendor, in the first instance, to lodge a map, showing the actual holdings, as they are required now to do for the Estates Commissioners. The Estates Commissioners require a vendor to lodge a map, showing each holding. The Congested Districts Board, desiring to make the cost of negotiating a sale as low as possible, only required vendors to lodge a map showing the boundary of the tenanted portions of the estates and the untenanted portions, but not showing the individual holdings; mainly for the reason that several of the estates offered to the Board were in such a state of rundale and intermixed plots, that vendors could not get local surveyors competent to make the surveys, and would have had to employ highly skilled men, and it would put them to considerable expense to have these rundale estates mapped on a large scale. Consequently, the Board, in order to facilitate the vendor, decided they would only ask him to show the boundary of the tenanted land and the boundary of the untenanted land, within the outer boundary of the estate.

59418. Sir ANTONY MACDONNELL.—What would be the effect, as far as one can imagine, on the price, of such bargains as that, whereby properties should be split up into good and bad parts, and each of these declared a separate estate?—I don't think that it will affect the total price.

59419. As a matter of fact, don't you think that a landlord would be disposed to put a higher price upon the good land, knowing that the bad land would be freed from all arrangements regarding the zones, and that it would be purchased by the Congested Districts Board?—The good portions of the estate, which would be excluded from treatment, should always go at a higher price.

59420. Of course, they would go at a higher price. That goes without saying. But my question is: don't you think that the landlord would be disposed to put a higher price on the good part with a view of protecting himself against loss upon the worst part?—Of course, he might do that; but tenants having knowledge of the transactions all round them, as they occur, get to a standard of prices.

59421. It would upset, at all events, the principle of arrangements by which the price of the whole, the good and the bad, is had regard to?—I don't think it would, and I don't think it ought, because I assume that when the vendor offers his estate to the Congested Districts Board he would not settle the price with the people beforehand; that the negotiations as to price would be subsequent to the inspection by the Board's officers, with a view to issue of certificate for direct sale of the entire or portion of it, and the price for the better portions to be sold direct could be arranged by vendor and tenants, as at present.

59422. CHAIRMAN.—Supposing that land which was good land or of the kind that was certified by the Board to be in a condition in which it might pass direct from landlords to tenants, and supposing that, as Sir Antony MacDonnell foreshadows, the landlord was disposed, because the land was very good, to put up the price to an impossible figure, would not the Board have the power to say, "No; in these circumstances we won't certify that it is land which can pass direct from landlord to tenant, but we will purchase that land on the basis of so-and-so." Would not that be a safeguard?——

Mr. KAVANAGH.—The certificate would have been given before, surely.

CHAIRMAN.—The certificate might be made with a proviso?—I do not think that the Board would be justified in refusing to certify for those reasons, but the issue of a certificate ought not to bar them from putting compulsory powers into operation at a later period if they deemed it necessary.

59423. Might not the certificate be made conditional?—It appears to me that they should certify for all estates that they cannot substantially improve by taking over.

59426. Most Rev. Dr. O'DONNELL.—But do you advert to the point that you are dealing with an estate which contains two sections—a section which may pass unimproved, and a section which needs improvement? Do you think would not the Congested Districts Board dealing with these insist on knowing the terms on which it must purchase the poorer part before it issued any certificate as to the passage of the other part of the estate from landlord to tenant?—The certificate could not possibly issue, as I understand, until after inspection.

59427. Do you think would the Board dream of issuing a certificate for the better part until it had come to a substantial understanding as to the price at which the other portion might be bought direct?—It would probably be a more satisfactory procedure not to issue the certificate until the price was arranged for both sections of the estate.

59428. That is what I was coming to. Does not it come to this then—before the Board makes up its mind as to apportioning off a part of the estate and declaring it a separate estate the Board will have come to an understanding with the owner about the aggregate price for the whole estate?—That would be satisfactory if the Board had not to buy the portion that did not need treatment.

59429. CHAIRMAN.—The Board could say to the owner—"Here is land which we admit does not require improvement, and therefore we are not anxious to deal with this land at all; we don't want to deal with it. You can go ahead, and arrange with your tenants with regard to this land, and if you can come to a satisfactory arrangement with your tenants, then come to us, and we will certify that the land is in a fit state to pass to the tenants"; and if there is any difficulty, if the landlord was to ask an absurd price, than the Board, as I understand it, should be perfectly free to say—"We are going to purchase this land; you have not been able to arrange with your tenants; we are not going to have a lot of this land lying in the centre of your estate unpurchased, and therefore we are going to purchase it on the basis that has been laid down by Parliament, and re-sell to the tenants"?—I think that it ought to work out in practice in this way. An estate has been offered *in globo* to the Board, and after inspection they decide that there is a certain portion of it that they ought to purchase. During the inspection the inspector would ascertain from the tenants the price they were willing to pay. The inspector could, if desired by the vendor and tenants, assist in arranging the price for the portion which it was intended to sell by direct sale, and if the Board arranged with vendor for the remaining section the declaring of both estates should occur at the same time—one section for purchase by the Board at a price, and the other portion bought by the tenants direct at a price arranged before issue of certificate.

59430. Sir FRANCIS MOWATT.—May I ask would the certificate of the Board depend upon the acceptance by the landlord of the price fixed by the inspector? An estate has two parts, and, as I understand you to say, you would propose that the inspector when he inspects should put a value upon the part of the land which may pass direct, and on the part of the land which required treatment. Would you say that the certificate of the Board would depend upon the acceptance by the landlord of the valuation made by the inspector of the two parts?—No. I would not say that in respect of the portion to be sold by direct sale; I suggest that the inspector would merely act as negotiator if invited to do so.

59431. CHAIRMAN.—Would you advise that? What has the inspector got to do with it? It is a question of voluntary sale, voluntary negotiations between the landlord and the tenant for land that does not require treatment. It is not the business, to my mind, of an inspector or anybody else to interfere in that case between the landlord and the tenant. It is for the landlord and tenant to come to terms, and to arrange between themselves at what price the land should pass. The only difficulty is the question of the certificate, should you grant the certificate, and take it out of the hands of the Board before the negotiations have taken place? Then if those negotiations fail you are left with a district of tenanted land, which has not been dealt with, lying in the midst of the Board's property. The tenants will clamour for some arrangement. They will say they cannot come to terms, and then things will go on in an unsatisfactory condition. My point is, cannot you hold over your certificate, and say: "We don't want to deal with this land; it is not land which is of any use to us, but at the same time of course we want it sold; we want it to change hands with the property lying all round it; go and make an agreement with your tenants if you can make a satisfactory agreement, and then come to us, and we will certify." If these negotiations fail, then the Board can say: "Well, rather than allow this land to remain in an unsatisfactory or unbought condition we will buy it." That seems to me fairly simple, but I don't think that the price which an inspector sets out should come in at all in a voluntary arrangement between landlord and tenant?—I am afraid that I have not made myself quite clear.

59432. Most Rev. Dr. O'DONNELL.—I think you have had compulsory purchase of land in view. This is a voluntary arrangement, and as a voluntary arrangement works out, is not this what you are cognisant of—that the landlord and tenant have their bargain made before they come to the Board at all?—They have not, and we don't desire that they should have.

59433. They frequently have?—Yes, in a very small proportion of the estates purchased by the Board, and the existence of such agreements have always increased our difficulties in dealing with the estate.

59434. Sir JOHN COLOMB.—The whole position would be changed. Their policy would not be to stop voluntary purchase on estates that did not require re-arrangement of part or the whole. I want to know this: is it in your mind that the landlord is to get the certificate first before he negotiates with his tenants, or that the certificate is to be asked for after he enters into agreements with all his tenants and they are completed? Which is the position that you take up? Take the position of the landlord in Connaught within the area—assuming Connaught to be within your area, and powers of compulsion given—who wants to sell direct to his tenants. Is he to apply to the Board before he begins negotiating for the certificate, or is he to apply to the Board when the negotiations with his tenants are completed? Which is your position?—My position would be that he ought to apply to the Board before he arranges prices, and after inspection he would be informed of the portion, if any, of the estate which the Board were prepared to certify as a separate estate for direct sale.

59435. Now, before the Congested Districts Board can give him that certificate he must open his estates for inspection—must he not?—Yes.

59436. If the estate on inspection is approved of, and a certificate that no re-arrangement was necessary is given, then he is in a position to be free to negotiate with his tenant-purchasers, but the result of the inspection will affect tenants' minds as regards price?—I think the best way is to explain how I would propose to proceed in the matter. A landlord in any of the counties containing congested estates has decided to sell his estate. Having done so, he notifies the Congested Districts Board of his intention to sell, with a view of ascertaining from the Board whether they consider that his estate or any portion of it ought to be sold to them or sold by direct sale. Before a reply can be given the Board must have the estate inspected. If the inspector reports it is an estate that needs little or no re-arrangement, or that the Board have no means of improving or enlarging the small holdings upon it, and that the inspector ascertained that tenants were not likely to migrate, if land could be got elsewhere—I would say in such a case the vendor should be informed that the Board were prepared to declare that property to be an estate that might pass by direct sale

59437. Sir FRANCIS MOWATT.—That part of the property might be declared an estate, because that is important?—I am taking the whole first, and I then come to the second case. The object of splitting in the second case would be this, that the Congested Districts Board want to reduce the dimensions of the problem, and one of the best ways in which this can be done is by excluding from their control all estates, or portions of estates, that they cannot substantially improve, in order to reduce to a minimum the area to be prepared for sale by the Board. Consequently, when the inspector reports that certain portions of the estate do not need treatment, and might be sold direct while the remainder of it is an estate that needs substantial treatment, and should not

Jan. 22, 1908.

Mr. Henry Doran.

be sold except through the Board, I don't think the Board should say to the landlord: "We will exclude the portion not needing treatment, and let you make such arrangements as you can with your tenants, and when you do so the Board are prepared to declare it to be a separate estate." That would rarely be feasible, for this reason. Many of these properties are mortgaged, or are liable to family charges secured on the entire, and a vendor could not sell one section of his estate and leave the other out, so that the two transactions, in my opinion, must usually be carried out at the same time; and while it would be no part of the duty of the inspector of the Congested Districts Board to fix a price between landlord and tenant on the portions of the estate that the Board do not propose taking over, it might be, on the other hand, his duty to report that the prices were such as the holdings were security for, or if the zone standard of valuing continued to apply, that they are within the zones.

59438. Sir JOHN COLOMB.—Will you just allow me to put you in the position of a landlord? He generally knows in dealing with his tenants whether he probably would be able to come to terms with all his tenants on the estate which would enable him to sell. According to your procedure, you first have to get the Congested Districts Board to send an inspector, and the Congested Districts Board's inspector rules out of the estate so many tenants because he considers that their lands need treatment; and then the Board say, "We will give you a certificate for the rest." Do you think now, knowing the country as you do, that the landlord, in those circumstances, would have any hope of coming to a voluntary agreement as to the rest of his estate when the tenants hear that the Congested Districts Board are coming in to the other part of it? And do you not think that it would, in effect, absolutely stop direct sale?—I had that objection in my mind when I suggested that both sections should be arranged for at the same time. I don't anticipate any difficulty in this. For instance, the tenants of the estate will know quite as well as the officer of the Board that a certain portion of the estate needs no improvement, that the Board cannot do much for it; and the tenants on these holdings will have no desire to have them bought by the Board, and be kept in hands for a couple of years, when they are aware that the Board are not going to spend money on the holdings. For that reason I think the proposed procedure will work out fairly well.

59439. What do you mean by doing it simultaneously? I don't exactly follow you. When you say that the operations of the Board and the voluntary sale by the landlord in agreement with his tenants should go on simultaneously, do you mean to say that the Board's schemes should be determined, where they are to go and what they are to do, by the landowners wishing to sell direct?—A landlord first offers his estate to the Board.

59440. I am taking the case of a landlord who wants to sell voluntarily?—If he does desire to sell, he may approach the Board, and ask if they are prepared to certify his estate for direct sale, and if the Board decide to split up the estate an effort should be made to have the price for both sections arranged at the same time.

59441. Most Rev. Dr. O'DONNELL.—He either offers it to the Board or he asks the Board to certify that it is an estate that they can pass?—The result of that is an inspection, and the result of the inspection is a decision as to whether the entire or portion of the estate may be certified for direct sale.

59442. The application is either that the Board should buy or that the Board should give a certificate. Now, suppose the application is that the Board should buy. When the Board receives that application, it inspects, and asks the vendor his price—is not that so?—Yes.

59443. The price is distributed over the good and the bad portions of the estate—Is not that so?—Yes.

59444. Suppose that the Board and the vendor are able to come to terms, and recognise that certain terms are fair for the whole estate, for the two portions of it together, and suppose that the Board would say, "It will convenience us, in practical management, that it should be divided into two, and that one portion of it should pass direct to the tenants and you should sell the other direct to us," is not that the way the thing would work out?—That is a way it might be arranged. But I meant to convey all along that when the Board was making those arrangements their inspector would assist in getting the price fixed for both sections.

Most Rev. Dr. O'DONNELL.—It is obvious you might get a complicated case, but to illustrate my argument I want to get the simplest case—that is, an estate in regard to which the Board and the vendor agree about the price. Even after they have agreed about the price, it is not necessary that the whole estate should be sold direct to the Board. Some of it may be sold direct to the tenants. Is not it the case that whether the Board buy direct itself or whether it sanction a direct transaction with the tenants, in every case the Board would be careful to ascertain what they think they are going to give?

59445. CHAIRMAN.—Suppose the landlord refuses to do that. Take the particular case that the estate is offered to the Board, and the Board fix a price, which is distributed over the good and the bad land, and that the Board say to the vendor, "It would be a great convenience if we were not obliged to take that portion of your property which we don't want to improve, and it would meet our convenience if we were to certify that portion to be a property such as could pass direct to the tenants, and we will buy the rest." Suppose you were the landlord, would not you be likely to say, "That would complicate matters. I don't want to deal with two people. I don't want to have the trouble of negotiating with the tenants for this portion of the land. I want you to take the rest. I offer it to you *in globo* or not at all." Suppose a landlord took that line, what would you do?—Most landlords would take that line, if they could oblige the Board to buy the entire.

59446. Most Rev. Dr. O'DONNELL.—I did not make my question clear. I did not suppose that the good portion would be left on the hands of the owner at all?—Let me put it in another way. My view is that if the landlord offers to sell his estate, or if the landlord applies to have his property declared an estate, in both cases it must be inspected, and in both cases the terms of sale could be arranged for it in one or two sections.

59447. Sir FRANCIS MOWATT.—The sale to the Board?—No. The sale must go through somehow. Once the landlord decides to sell, he will have to sell his estates either this year or next year. If the Board find certain portions of an estate, which they learn through their inspector needs treatment, then they have to say, "We cannot agree to certify your property to be an estate which should be sold on direct sale: there is a certain portion of it, however, which we will be prepared to certify."

59448. Surely, the landlord is not asking for that. *Ex hypothesi*, he is asking to sell the whole estate to the Board?—I was taking the whole case first. I will take it either way.

59449. CHAIRMAN.—You are taking the supposition that he was asking for a certificate to sell direct?—In one case the landlord offers to sell his estate to the Board, and the Board inspects——

59448. And the Board says, "There is part of the land which we don't want to buy, because we cannot improve it." Then the Board cannot expect that the landlord will agree to sell to them the portion that they are willing to buy without at the same time having an arrangement made for the purchase price of the portion of the estate that they desire to exclude, can they?

Sir JOHN COLOMB.—Suppose that the Board come to the conclusion that there is one portion of the estate which requires treatment, then, instead of their offering a certificate to the landlord on which he is to make an agreement with the tenants, what objection is there to the Board buying the whole estate?—None whatever, except encumbering their administration with property which they cannot improve.

59450. I don't see that they are encumbering themselves. The Board are taking no risk. If it is within the zones, where is the risk to the Board?—There is no risk to the Board, but there is delay and expense incidental to the sale of the holdings to the tenants.

59451. Then, what is the objection?—I make no other objection.

Mr. SUTHERLAND.—I don't think it was Mr. Doran's suggestion.

Sir JOHN COLOMB.—There is portion of an estate which does not require treatment. Why should not the Board deal with the whole estate, and deal with those tenants, and get rid of it?

Mr. SUTHERLAND.—I don't think that the contrary was argued.

Mr. KAVANAGH.—It is the only way out of the difficulty.

CHAIRMAN.—That the Board would take it over?

Mr. KAVANAGH.—Yes. The difficulties of splitting an estate with one portion sold to the Board and the other sold to tenants by voluntary sale are too numerous to be contemplated. I think that if there is portion of an estate requiring improvement, and the Board require that portion, then the whole estate should be taken by the Board.

59453. CHAIRMAN.—Suppose you purchase *in globo* from the vendors an estate upon which there are holdings that require treatment, while there are parts that do not require treatment. Could you allow the Board to declare the part that does not require treatment an estate, and allow it to pass over rapidly to the tenants, retaining the other part to be improved?—I was going to say that that was obviously a way out of the difficulty. If the Board got power to purchase an estate, and divide it, and sell portion of it direct, as soon as possible, after arranging with the vendor, that would get over the difficulty that has been discussed.

59454. Sir FRANCIS MOWATT.—I should have thought that that was what we were trying to arrive at from the very beginning. Why could not the Board buy the whole estate, and sell the one half direct and the second half after they had done the required treatment?—The only remark I have to make is that if you limit the output of the Board to £1,000,000 a year, as suggested, and if you include all these transactions in the limited output, it will take a long time to get rid of all the land that you want to deal with.

59455. Mr. KAVANAGH.—How many generations will it take to get over the difficulty of splitting an estate in two and selling one to the Board and leaving the other to be carried out by voluntary sale? You could never do it?—That is why I suggested from the beginning that both transactions should be carried out simultaneously. I think that very few estates could be so divided by reason of mortgages and family charges, unless the sale of both sections could be carried out about the same time.

59456. CHAIRMAN.—How about an estate where a vendor applies to the Board for a certificate for a direct sale—there is a difference there?—There is. Because, in many such cases, the Board may be able to report at once that the entire estate is one that may be sold direct.

59457. That is possible, but suppose you find on inspection that part of the estate is in such a condition that it cannot be allowed to pass direct, what is the Board to do then?—It comes back to the case we have been discussing.

59458. Most Rev. Dr. O'DONNELL.—Surely you can do it now?—You cannot do it now.

59459. Is not it quite possible in such a case as the Dillon estate to take part of it, and fit it for sale much more quickly than the rest of the estate?—Yes, but you cannot sell until you become owner, and you must pay the purchase money before you become owner. One way to do it would be to give to the Board the same powers that the Estates Commissioners now have under section 6 of the Act of 1903, when portion of an estate is to be sold by direct sale, of having the sale agreements executed by landlords and tenants, the Board being responsible for the total price agreed upon. That would meet all the difficulties that have been raised, and the Board take over the portion of estates requiring treatment.

59460. CHAIRMAN.—Then our conversation has brought us to this. It is not feasible, so far as we can see, to divide an estate; that the estates within any specified area which it is suggested to give to Board must be sold as estates either to the Board or by direct sale?—The inspector might arrange that a certain number of the tenants should buy at a price amounting to, say, £10,000 by direct sale. The landlord is quite willing to do that. Section A then is to be sold for £10,000 direct, and is to be declared as a separate estate. Section B the Board proposes to buy for £40,000. The two sections are declared to be an estate at the same time, and the landlord is to get £10,000 with the bonus for one section, and to get £40,000, plus the bonus, for the other section.

59461. Sir JOHN COLOMB.—If you split it he has got to go to the tenants, and say to them, "Agree to buy"?—I have said all along that the price for both sections should be arranged at the same time.

59462. Most Rev. Dr. O'DONNELL.—That is the key to the whole situation?—The agreement as to the amount the tenants will give must be a preliminary to fixing the price.

Sir JOHN COLOMB.—Then a certificate cannot be applied for until a landlord agrees with his tenants.

59463. CHAIRMAN.—If it is possible to split an estate then an arrangement between landlord and tenant must be arrived at before the vendor approaches the Board. He must come to the Board and say—"I have an estate, part of which is good land and part of which is land that no doubt requires treatment. I have arranged with my tenants to purchase the better land direct from me at a certain price." If you agree to buy the other part on the same day as you suggest, the estate is divided, the certificate is granted by the Board to carry out the arrangement made with the tenants on the one hand, and you purchase the other portion?—There would be no difficulty in doing that in a majority of cases.

CHAIRMAN.—That is the only way in which it can be done.

59464. Mr. BRYCE.—How can it be done without inspection?—It cannot be done without inspection.

59465. Most Rev. Dr. O'DONNELL.—It is not necessary before negotiating a bargain between the vendor and the Board that the tenants and the vendor have agreed on a price for the better portion. It will quite suffice if up to the time the Board and the vendor have agreed about the price for the whole estate the tenants have agreed as to the price at which they will buy?—That will suffice.

Sir JOHN COLOMB.—Then the landlord is to carry out a direct sale to the tenants through the Congested Districts Board. That is your proposition?

Most Rev. Dr. O'DONNELL.—No.

Sir JOHN COLOMB.—The price of the whole estate is to be fixed between the landlord and the Congested Districts Board. That is ruling the decision of the landlord with regard to his tenants, whom the Board don't want to touch.

Sir FRANCIS MOWATT.—That is not quite so. He would come to the Congested Districts Board, and say—"I can sell to my tenants, A, B, and C, for so much money. That being so, can I agree with you to buy the rest at such a price"?

59467. Sir JOHN COLOMB.—Then the Congested Districts Board must give that price?—The price represented by his agreement with his tenants.

59468. CHAIRMAN.—Where is the inspection to come in under your proposal? I should have said before?—I have been viewing that proposal from what I know of the difficulties that usually arise. If the tenants enter into an agreement to purchase with the vendor before they approach the Board, the Board ought not to buy, because, as you have it in my evidence, once the tenants enter into agreements to purchase their holdings, and the Board subsequently buy the estate subject to the agreements, they have no power to deal with the estate, except under voluntary arrangements. The relation of landlord and tenant no longer subsists. They cannot enter upon the lands and applot turbary, make roads, or re-arrange holdings; so I have said all along, before the Board negotiate for the purchase of an estate the price should not be fixed between the landlord and tenant.

59469. Most Rev. Dr. O'DONNELL.—That is easily understood: before negotiations begin the price cannot be fixed?—Not before the Board are invited to offer. There is a general desire now among the landlords in the West of Ireland to settle the price with their own tenants before they ask the Board to buy. The result is in the case of poor estates that the tenants are so anxious that the Board should purchase and spend money in improving the estate that they would agree to give two or more years' purchase for their holdings than they otherwise would. For this reason, and the reasons already stated, the Board in all cases object to purchase estates if the tenants have already entered into agreements to buy their holdings at a stated price. We have done it in a few cases, and we have had great trouble in dealing with the tenants.

59470. Most Rev. Dr. O'DONNELL.—I don't think that anyone contemplates that being done under the new arrangement. Take the case in this way. The owner says that he is willing to sell his estate, and comes before an officer of the Congested Districts Board or before the Board itself for the purpose. The Board asks him what is his price.

Jan. 22, 1908.

Mr. Henry Doran.

He names his price, it is tenanted land, *ex hypothesi*, or largely tenanted land. The Board's officer goes down and makes an inspection, and finds out what the tenants are willing to give for their holdings——

Sir FRANCIS MOWATT.—All over the estate—both parts?

Most Rev. Dr. O'DONNELL.—More particularly on the part that must pass or may have to pass direct—indeed over the whole estate?—I would say over the whole estate.

59472. They also value or fix a value on the grass land. The Board says in these circumstances—"We are not able to give you more than such and such a sum for the entire estate, and it is apportioned in such and such a way on the different portions of the estate." Suppose they come to an agreement about the price, as has happened in the past, then the price is agreed on between them. It is a voluntary sale. The Board then says—"We require powers to allow some portions of that estate to pass straight to the tenants; other portions we must hold in our own hands." I take it that that in the main is your suggestion?—That, in substance, is one of my suggestions. Let the Board agree to buy the entire estate, and let them then declare each part of the property a separate estate, that is, the portion to be sold by direct sale, separate from the portion to be treated; and if the Board had the power which the Estates Commissioners now have of merely getting the tenants on the portion that does not need treatment to sign purchase agreements with the landlord for a price which the landlord agrees to accept, the purchase would be from the tenants to the landlord direct on that section of the estate through the intervention of the Congested Districts Board, as is done at present by the Estates Commissioners in cases coming under section 6 of the 1903 Act.

59473. Sir JOHN COLOMB.—Do you mean that the landlord and the Congested Districts Board having come to an agreement on inspection, the landlord says he will sell for so much, and you agree that it is a fair price, then you divide this estate into two portions, one of which you are going to deal with, and the other of which is to go direct to the tenants: do you mean that the Congested Districts Board will do the rest, and secure to the landlords that the tenants do agree?—Yes.

59474. Sir FRANCIS MOWATT.—What about the date at which the inspection should come. As I understand the proposal which you are now considering, the question of inspection will raise no difficulty at all?—No. I don't see any difficulty raised by inspection, but it must always take place before any answer can be given as to whether the estate is to be declared an estate in one or two sections.

59475. Sir JOHN COLOMB.—Any objection based upon inspection goes out of it altogether if the landlord is to get the price agreed upon; and if the Congested Districts Board is to be responsible for the price agreed upon I don't care about inspection?—From the beginning that was the foundation of my suggestion, with this qualification—that at present the Board have no power to have any privity with these direct transactions, and they should consequently be allowed to exclude that portion of the estate from sale; but it might be made part of the Board's duty to arrange that undertakings to purchase at prices which amount to the total sum that the landlord agrees to accept are entered into for that portion to pass by direct sale while they agree to buy the remaining portion.

Mr. BRYCE.—It seems to me that the whole of this is really a dispute about words, because does not this mean that the whole sale is done through the Congested Districts Board. The introduction of the question of direct sale is really not a matter of any importance at all; practically the Congested Districts Board become responsible.

Most Rev. Dr. O'DONNELL.—It is a question of expeditious administration.

Mr. BRYCE.—It is a question of expeditious administration, and the only advantage of Mr. Doran's suggestion is as regards the margin of money that the Congested Districts Board has to deal with. Cannot that be provided for by saying that the amount of money, the £1,000,000, or whatever it is, shall be limited in its application to those cases where the Board is going to keep the land in hand for treatment, and that its margin should be increased *pro tanto* in proportion to the amount disposed of by direct sale.

Sir JOHN COLOMB.—That practically stops direct sale, except through the Congested Districts Board.

Mr. BRYCE.—No sale should go through without inspection within the Board's area. The moment you introduce inspection you introduce the responsibility of the Congested Districts Board for the whole affair.

Sir ANTONY MACDONNELL.—Not in case there is no congestion. In the case of estates which are not to be treated, in which Mr. Doran does not want to do anything, he would want to assure himself beforehand that there was no necessity for treatment. It would not be inspection as regards price, but merely inspection to see whether the estate can be passed through, and handed over to the Estates Commissioners to deal with on the certificate.

Sir JOHN COLOMB.—Certainly.

59476. CHAIRMAN.—You remember that case in East Galway where a landlord had good land. He had also bad land somewhere else. There was a difficulty in that case, and he insisted on the Board buying both estates?—That is the Blake estate.

59477. Suppose that in that case the owner had not insisted on both properties being sold together: with regard to the East Galway property there was nothing to do there?—No, except to give rise to any amount of trouble because we would not give it to sons of tenants.

59478. There was no improvement?—No.

59479. There was an estate which, if the man had not insisted on it being linked up with his tenanted estate, might be very well certified to pass direct.

Most Rev. Dr. O'DONNELL.—It comes really to this: in addition to the untenanted land you acquire some fair land, which will pass in estates, and require no treatment.

59480. Sir JOHN COLOMB.—I agree with you personally as regards estates requiring treatment. Now let me come to your proposal as to estates requiring no treatment. Your idea is that the landlord should say to the Congested Districts Board that he is ready to sell. You agree with me that, perhaps, there is no treatment to be done. Are you going to arrange with the tenants what they are going to give, and are you going to leave the landlord, when you have inspected, in the position that nothing has been done? You find that nothing at all is required, but the landlord has not negotiated with the tenants. He knows his price, and you say, "Now, that is clear, and you are at perfect liberty to sell." Are you going then to take the case up for the landlord, and arrange with the Estates Commissioners that he is to get that money? Do you arrange what the tenants are going to give?—No.

Sir JOHN COLOMB.—Then you stop the direct sale of all estates that don't require treatment.

59481. Sir ANTONY MACDONNELL.—How is that?—What should be done is this: intending vendors of estates in counties containing congested districts should, in the first instance, before arranging any price with the tenants, apply to the Board to ascertain if the Board are prepared to declare the entire property to be an estate for direct sale. The Board, after a casual inspection, not an expensive one, will be able in many cases to declare such property an estate that might pass by direct sale. They then express their willingness to certify to that effect, which means that the landlord will negotiate direct, as at present, and the estate will pass through direct to the Estates Commissioners, as at present.

59482. Sir JOHN COLOMB.—I quite agree?—If they remain as at present with the relations of landlords and tenants, by requesting him to apply for a certificate before he fixes the price on the holdings, you would get over the difficulties that you were anticipating about price.

59483. Sir ANTONY MACDONNELL.—What will be the proportion of congestion which will decide you in withholding that certificate or not? What would be the proportion of the estate requiring treatment that would induce you to keep the estate for yourself and not allow it to pass under certificate to the Estates Commissioners?—I would not like to fix any proportion, because I think if there was only one townland on an estate in rundale and in need of treatment, or one townland with several small holdings, that was near a grass farm, you would be justified in stipulating that that townland should not pass by direct sale.

59484. Take it that there were 100 tenants on an estate, and that ten or five of them required rearrangement, would you keep that estate?—Your arrangements would be such that you would make these ten right, if they could be made right.

59485. You would have to buy that estate in order to do it?—Not under my proposal, if I made it clear.

59486. I certainly understood you to say that you would?—I would exclude the portion, big or small, that did not want treatment.

59487. You would have to buy the whole estate before you excluded?—If you have to buy the whole estate it will, in the case stated, mean a large transaction for small results.

59488. Most Rev. Dr. O'Donnell.—You might have four or five tenants up and down the estate. Would you not allow that estate to pass direct?—Yes; but I am talking of a small section of the estate, such as a townland or so.

59489. Sir Antony MacDonnell.—I thought we had come to this conclusion: that without buying the estate and becoming the owners for the full price, you could not proceed to divide it up into sections, part of which can be sold off without any treatment and part of which requires treatment, and that it was on account of that that you would require a margin, and in regard to the portion to be passed through you would step into the position of the Estates Commissioners—you would be the broker between landlord and tenant?—Yes; but the Estates Commissioners don't actually become legal owners. In cases where the Board perform the function of brokers I suggest the Board would have purchase agreements signed between landlords and tenants covering the amount of purchase money agreed upon for the section of estate not needing treatment.

59490. I thought we had come to this conclusion—that you have the right to buy or not to buy. If there is no treatment necessary you don't buy. You simply satisfy yourself that no treatment is necessary, and you give a certicate, and then the landlord deals with them as he does now, and deposits his agreements with the Estates Commissioners, or applies to the Estates Commissioners under section 6 to get them to buy the whole thing. If you buy an estate on which ninety-five do not want treatment and five do require treatment ,and become responsible to the landlord for the price, when the estate is vested in you and you have deposited your money you can divide that estate up into smaller sizes if you wish. You can say to the ninety-five tenants, "Come to an agreement" or they may have come to an agreement before you bought at all; then you ask them to carry out their agreement, and pass the land to the ninety-five straight off. There is no difficulty in that: you do it in two or three months, and you draw the money, and then you deal with the five who are left?—That seems to me to be a very objectionable arrangement altogether.

59491. Chairman.—I don't like to insist on what I am told is impossible, but in a case like what Sir Antony mentions, what is to prevent the Board from adopting the plan which I suggested half an hour ago? What is to prevent the Board saying, "Our inspection has shown us that there is a certain proportion of congestion on this estate which prevents us at present from giving a certificate that it is an estate which can pass from landlord to tenant. You have in a corner of an estate a little patch of congestion. This may be remedied, and if you can, with regard to nine-tenths of your property, arrange satisfactory terms with your tenants, then come to us and show us that these terms have been arrived at, we will then certify with regard to nine-tenths of your property that it is an estate which can pass direct, and on your then proceeding to a sale with your tenants on the nine-tenths we will undertake at the same time to purchase the one-tenth which is congested"?—The suggestion which I have made is that the terms of purchase should be simultaneously arranged for both sections of the estate.

59492. I venture to say it comes back to what I said. You must withhold your certificate in that case until the man has arranged with his tenants. You may say, "Go away, and make your arrangements with your tenants"?—I did not suggest that you should do that.

59493. Sir Francis Mowatt.—In the transaction, as to the part of the land that you can pass direct, are you contemplating that the Board, before they accept shall satisfy themselves that the prices are correct prices for those tenants to pay? You are discussing now the price of an estate, part of which can pass direct and part of which must be treated, and the proposal, roughly, is you should say to the landlord, "Settle with your tenants the price of the part that is passing direct and we will give our certificate as regards that price." Do you contemplate before giving that certificate that the Congested Districts Board should have approved of the price which the tenants have to pay?—No. It rests with the Estates Commissioners to approve of the prices in cases of direct sale.

59494. Chairman.—Personally, I would say that they have nothing to do with the matter?—In the case just mentioned what would happen is, it would be a direct sale, and the agreements would pass, as now, to the Estates Commissioners. Their function in relation to the agreements would be to have the non-zone cases inspected by their inspector, and reported on as to security.

Sir John Colomb.—You are assuming that the landlord agrees with his tenant before he applies to the Congested Districts Board.

Chairman.—The only way, then, is this: a landlord comes to the Board, and says, "I am anxious to sell my estate direct; will you certify that I can do so"? The Board then proceeds to have that casually inspected, and discovers that 80 per cent. of the estate or 70 per cent. or any figure you like is in a condition which can pass direct, but that 20 or 30 per cent. contains congested holdings, which must be improved. If the Board certifies that the whole of the estate is to pass, then the 20 or 30 per cent. suffers. I mean that the Board has no opportunity of improving them. They may be a small proportion, still, whatever their number is, they don't get their circumstances improved. I would say that the Board should say to this landlord, "We find 20 or 30 per cent. of your estate is in this condition, and, therefore, we cannot certify at present that it is in a fit condition to pass direct; but go away and make agreements with your tenants, with regard to this 70 per cent., and we will deal with the rest of them." You would then show him on the map the portion of the estate that you would certify for direct sale and the portion that you wanted to buy.

Sir Francis Mowatt.—"Go away, and make arrangements with your tenants with regard to that 70 per cent., if you can do so; then come back to us, and if we can then make a satisfactory arrangement with you with regard to the other 30 per cent. we will certify that your 70 per cent. portion can pass direct, and we will take over the 30 per cent."

Sir John Colomb.—Is there the slightest hope of being able to arrange with the 70 per cent. when the others are going to get the benefit of the Congested Districts Board's interference?

Chairman.—Why not?

Sir John Colomb.—This is the state of mind of the tenants. The Congested Districts Board is coming to deal with portion of the estate. It will set them all agog. They will hold on until they see what benefits the congested people are going to get, and the moment the Congested Districts Board have done anything they will open their mouths wider.

Mr. Sutherland.—Are you referring to the landlords?

Sir John Colomb.—No; the tenants.

Mr. Kavanagh.—It might cut both ways.

Sir Antony MacDonnell.—What becomes, Mr. Doran, of the necessity of road making, turbary, and drainage if 70 per cent. passes out of your hands altogether, and 30 per cent. remains? How will you arrange about all these?

59495. Chairman.—That may be a reason which would prevent the Board from certifying?—When you indicate on the map beforehand the portion of the estate you wish to purchase for treatment you will exclude all holdings of that kind—holdings affected by roads and drains.

59496. Sir Antony MacDonnell.—The whole estate may draw its turf from one bog?—Of course it would naturally draw it from one bog if it was in the neighbourhood.

59497. Chairman.—It seems to me then that if it is of such a character that it was a bog centre which would affect the whole estate you would have to buy the whole estate?—It was suggested that the Board might in all such cases arrange the price for the estate, if they had power to carry out the sale in this way, to get undertakings to purchase from tenants of all

Jan. 22, 1908.

Mr. Henry Doran.

holdings on the estate which they did not need to interfere with and declare that to be a separate estate for direct sale from the landlord to the tenant, and the Board should take over the remainder of the estate at the balance of the gross price agreed to be paid to the landlord.

59498. It seems to me that the difficulty of that plan is this, that you are then really taking the negotiations out of the hands of the landlord altogether?—If you object to that, I am negotiating with you for the entire. I take the responsibility of settling with the individual tenants and lodging undertakings and you must get the balance of your purchase money.

59499. The landowner may not be satisfied with the purchase price?—Then if not, there is no way but to buy out the entire estate.

59500. Most Rev. Dr. O'Donnell. Take the case you have made. In that case the Board would consult with the tenants to ascertain what has been passing between the tenants and the owner, and the Board and the owner have come to an agreement about the price. That is the case you are making?—Yes. On the gross.

59501. In that case I take it what you are anxious for is this, that the Board having ascertained the price which the tenants are willing to give and having come to an agreement with the owner as to the price which he is to get on the gross, should have power to arrange, so that a certain amount of the property will pass direct to the tenants and another portion of the property pass direct to the Congested Districts Board?—Yes.

59502. That is how you sum up your idea about how the thing would mainly work out in practice?—Yes, and my only objection to taking over the entire purchase is that it will so increase the volume of property to be dealt with by the Board that it will make the rate of progress in dealing with the areas that need treatment extremely slow.

Sir Antony MacDonnell.—It comes to this: I think we cannot ignore the definition of congestion altogether.

Chairman.—It does not seem to me to affect the question at all. How is the definition of congestion going to help you here in the least?

Sir Antony MacDonnell.—It will indicate at once what estates you ought to buy.

Chairman.—It will indicate that on certain estates there are poverty and congestion.

Sir Antony MacDonnell.—It will indicate also that the poverty is a negligible quantity if you so regulate the definition of congestion.

Chairman.—A negligible quantity means, however you try to get out of it that you are prepared to sacrifice a certain number of tenants.

Sir Antony MacDonnell.—I think it a *reductio ad absurdum* that in order to improve the condition of five tenants you are to buy the holdings of 500.

59503. Most Rev. Dr. O'Donnell.—I don't see that this is a question which affects our definition of congestion at all. I would agree with Sir Antony MacDonnell in leaving the five men in their present condition, leaving them to be improved in some other way. There are many such people in all parts of Ireland and I don't see how it affects the definition of congestion. What difficulty is there in the supposition that the owner and the Congested Districts Board, after the tenants have been consulted, would in voluntary agreement agree about the price for the whole estate, and that the Congested Districts Board would in future have the power which the Estates Commissioners possess of allowing portion of that estate to pass direct to the tenants and keeping the other portion in hand for improvement? Is not that the whole thing?—That is the whole case. You can declare any portion of a property to be an "estate."

Sir Antony MacDonnell.—When your lordship said you agreed with me in regard to the remaining tenants I think your lordship admitted in principle the importance of the definition of congestion in regard to estates, and you ought to have a principle which would regulate your not buying particular estates and buying others.

Most Rev. Dr. O'Donnell.—I hope you would agree with me that no matter how efficient the improving authority is it cannot propose to itself to eliminate every single uneconomic holding in each district.

Sir Antony MacDonnell.—That is my reason for raising this question. If you don't have some definition of congestion you will empower the authority to deal with every single case of congestion that may arise.

Most Rev. Dr. O'Donnell.—And it would be for the authority not to touch in this way the relief of congestion except in case of an appreciable area on the estate.

Sir Antony MacDonnell.—That is the principle I am contending for.

Chairman.—Obviously if there are a few tenants scattered about the estate who are in a very poor condition it would be very difficult to pick them out from the estate, but if there is a townland or a corner of an estate in a very congested condition which needs improvement, is not it perfectly possible to arrive at a plan by which the 95 per cent of that property shall pass direct, and the Board take over that 5 per cent.? Is not that possible?

Most Rev. Dr. O'Donnell.—Quite possible.

59503A. Chairman.—And it seems to me perfectly indefensible, if an estate of that sort exists, with a little townland in a corner of it, with five or six or ten tenants in a very poor condition, to sacrifice those tenants?—It is usually the case that where there is a mixed estate with some very poor holdings the poor holdings are usually clustered together in portion of the area.

Sir Antony MacDonnell.—They won't pass uncared for. If they were only 5 per cent., say, scattered up and down according to his lordship the bishop, and, as I understand, according to you——

Chairman.—My point is that the poor tenants are all lying together.

Sir Antony MacDonnell.—If there was an estate consisting of 100 tenants, with five tenants having uneconomic holdings in a corner, your lordship would still, as I understand the matter, give a certificate that that estate should be passed through the Estates Commissioners?

Chairman.—I should bar that townland.

Sir Antony MacDonnell.—Why bar that townland because the Estates Commissioners are competent to deal with that townland?

Chairman.—That raises the question whether the Board and the Commissioners are to operate in the same area.

Sir Antony MacDonnell.—That is a point, but I want to point out that if the Congested Districts Board retain that estate for the sake of improving that small area they will be spending money and spending time and enlarging enormously the problem with which they have to deal, while there is another agency equally well adapted for the purpose of such small work as that.

59504. Chairman. That little townland has got to go into the possession of some body to be improved, and has got to go into the possession of the Estates Commissioners or the Congested Districts Board. The rest of the property, although it goes through the agency of the Estates Commissioners, does not actually pass into the possession of the Estates Commissioners?—That is the point.

Chairman.—They are the main conduit pipe between the landlord and the tenants.

59505. Most Rev. Dr. O'Donnell.—With reference to those five, I think if they happen to be in a townland such as Lord Dudley contemplated, would not it be your view when the Congested Districts Board had arrived with the owner at an understanding about price, the Board would allow the 95 per cent. to pass direct, the formalities being done by the Estates Commissioners, and declare a congested estate the land on which the five were situated, and in that way reserve the five for treatment?—Yes.

59506. They could do that now?—Yes. They could schedule the land as a congested estate, and lose the ten per cent. What I have thought of that is that it would be very much more desirable that the Congested Districts Board should be responsible for the carrying through of the purchase perhaps of an estate which was to be divided into two sections, one being scheduled for direct sale, and the other for sale by the landlord to the Board; that the Board should get agreements signed by the tenants, and become responsible to the landlord for payment of the agreed price, which there would be no difficulty in doing in practice. We get undertakings lodged with the Estates Commissioners to cover the price agreed upon for Section A.

59507. Sir FRANCIS MOWATT.—You apprehend that if the Congested Districts Board were to buy estates on which only a small portion is congested, that will naturally use up very much faster the £1,000,000 a year which was suggested for dealing with the congested parts?—Yes. It would encumber the Board's administration to some extent.

59508. Whether the non-congested portions of an estate are purchased through the Land Commission, or whether they are purchased through the Congested Districts Board, the expenses will equally fall upon the same fund?—Quite so.

59509. Therefore, as regards the total expenditure, in dealing with those lands it will be the same in the one case as in the other, subject only to the Congested Districts Board in case of the removal of the Estates Commissioners. So I don't see, subject to any explanation you may now give, why the total charge upon the fund out of which the purchase is to take place will be increased, because the purchase is made by the Congested Districts Board, and not by the Estates Commissioners?—As regards the portions of the estate not needing treatment, the Congested Districts Board's expenses of administration would be increased in a small proportion, but to that extent only that would be necessary to cover the cost of preparing and completing the sale agreements and to pass them through the Sales Department.

59509A. Mr. BRYCE.—But you are not going to pass them through?—Yes.

59510. Most Rev. Dr. O'DONNELL.—Out of the Land Purchase Fund must be found in any case the purchase money for those properties?—Yes.

59511. If the improvement costs something to the Congested Districts Board under the proposed scheme it would have cost a corresponding amount to the other authority?—Certainly.

59512. Sir FRANCIS MOWATT.—I don't see, therefore, that this change in arrangement increases the total annual charge which would fall upon the State Fund?—Certainly not. It won't increase it at all; but some confusion of ideas appears to have occurred in the discussion, from the fact that I was expressing my opinions altogether in view of the suggestion made to the Commission, that the output of the Board would be £1,000,000 a year, and in order to make the administration as effective as possible as regards the relief of congestion, I considered it very desirable that they should not purchase estates, or substantial portions of estates, that they could not substantially improve, and that it would be an incumbrance to the Board's administration to be obliged to undertake the function of supervising direct sales, which could be done by the Estates Commissioners, as at present.

59513. Sir JOHN COLOMB.—You see no objection to the Congested Districts Board within the area of operations being the conduit pipe?—No, if you don't apply the output limit of a million a year to such estates, I see no objection whatever.

Most Rev. Dr. O'DONNELL.—As Sir Francis pointed out to you, it is very much the same thing whether the zone is on one side of the line or the other.

Sir JOHN COLOMB.—The whole thing that is exercising my mind is what effect is the operation that is suggested going to have on stopping direct sale? My mind is not clear at all on that.

Sir FRANCIS MOWATT.—Assuming that to be the case, that you may stop direct sale, won't you, *pari passu*, increase the number of sales of land at an identical price, only it will be through the Congested Districts Board instead of being direct? The same amount of land will be sold, the same price will be paid, but instead of many cases of direct sales from landlord to tenant, the Congested Districts Board will buy *in globo* all estates, any portion of which need treatment.

Sir JOHN COLOMB.—The sales will be all under section 6, or, at all events, *in globo*.

Sir FRANCIS MOWATT.—Yes.

CHAIRMAN.—I still personally cannot understand why it should be impossible to divide an estate. If the suggestion that was proposed some time ago were adopted, Sir John says that there would be no chance of getting the tenants to agree. Upon that I cannot express an opinion. Sir John says that, and I don't know whether you agree with him, but I cannot understand why it should be so.

Mr. KAVANAGH.—There would be great difficulty.

59514. CHAIRMAN.—Then, suppose that it does come to this, that you have to buy the estate *in globo*, what difficulty is there in saying to the landlord, "Go and arrange your terms with 70 per cent. of your tenants, and then come back, and we will undertake to take the rest"?—There would be no difficulty, as far as I know, in carrying out a sale to make it a condition that where the Board declared a portion of the estate needed treatment, to oblige the Board to be responsible to secure to vendor the total price agreed for the entire estate. That was suggested a moment ago.

59515. Most Rev. Dr. O'DONNELL.—If you do that you will quite meet Mr. Kavanagh's point. Mr. Kavanagh does not want a conveyance to the Board. All he wants is agreement as to price?—Yes; precisely the same procedure as the Estates Commissioners now apply. They inspect an estate. They find that a certain section of the estate, it may be 10 out of 100, come within the definition of congested estate. On the re-sale of that they can lose a certain percentage, and pass the remainder of the estate by direct sale. If the Board decided that portion of an estate is such as should be subjected to treatment, there would be no difficulty if the Board arrange with vendor the total price, getting undertakings signed by tenants and vendor in respect of those parts of the estate which they desire to pass as a separate estate by direct sale.

59516. Mr. KAVANAGH.—That meets my point altogether?—In practice there is no difficulty in that. It will get over Sir John's difficulty also.

59517. CHAIRMAN.—That contemplates, does it not, that there should be advances beyond the million? You would suggest that those holdings with regard to which the Board got any undertakings should not be included in the million?—They should not.

59518. And the sales in these cases should be treated as direct sales?—Yes.

59519. And should not be included in the million given the Board?—They should not.

59520. Sir ANTONY MACDONNELL.—The million is to be the cost of land?—The proposed sale price of land per year.

59521. CHAIRMAN.—If you depart from your million does not it lead us into great complication? To begin with, how do we know how much of this land outside would be purchased? We don't know what amount of money outside the million would be required by the Board. That is one difficulty. It is impossible for us to earmark any particular sum for that?—At present I don't see any objection to depositing those undertakings in the ordinary way with the Estates Commissioners, and letting them deal directly with the vesting, as they must eventually do in any case. I see no difficulty about sending in agreements to cover a certain section of the estate, and letting the Estates Commissioners deal with that portion of the estate which is in a normal condition, the same as they do with estates no portion of which needs treatment.

59522. Sir JOHN COLOMB.—Would not that involve the Estates Commissioners sending inspectors down?—There is no objection to that that I can see.

59523. CHAIRMAN.—That would be a double inspection?—No. They would be only inspecting as to boundaries and security of non-zone holdings, as they do now in cases of direct sale.

59524. Sir ANTONY MACDONNELL.—No. The agreement has been made by you and then submitted to the Estates Commissioners?—The agreements would not be between the Board and the tenants, because the Board are not yet owners.

59525. Between whom would they be?—Between the owner and the tenant, the Board being merely an agent, or negotiators, who say to vendor, "We value one section of the estate at £10,000, and the gross estate at £100,000. We propose, and undertake, to get agreements lodged in respect of one section of the estate for £10,000. Then we will pay you £90,000 for the remainder, so securing you £100,000, which you agreed to take for the entire estate."

59526. If the Estates Commissioners send down an inspector, who says, "We don't consider that this is sufficient security," what is to happen?—The agreements lodged are to be subject to such provision as apply to all cases of direct sale.

59527. You would have made an agreement with the landlord?—As regards the portion of estate to be sold direct, the Board's responsibility ends on obtaining agreements from the tenants and vendor to purchase their holdings at the prices agreed, provided that the agreements are accepted by the Estates Commissioners.

Jan. 22, 1908.

Mr. Henry Doran.

59528. Sir JOHN COLOMB.—Do you mean that the gross price settled between the Congested Districts Board and the landlords may be subject to the review of the Estates Commissioners also? Surely, that makes the landlord worse off than ever?—I don't see why it should. All agreements for direct sale are, at present, subject to these conditions.

Sir JOHN COLOMB.—It brings in the Estates Commissioners to review the price given by the Congested Districts Board.

CHAIRMAN.—There would be double inspection. Your people would have to inspect first of all in order to fix a price, so that they could say to the landlord, "We will undertake to get you agreements as regards £10,000." You would have to found that agreement upon advice given to you by your inspectors, and then, having done all that, the Estates Commissioners would send down the inspectors in order to review what you had done.

59529. Most Rev. Dr. O'DONNELL.—Are not your valuers valuers from the Land Commission?—No.

59530. They are supposed to be in future?—Only in respect of untenanted lands and holdings not subject to judicial tenancies.

59531. CHAIRMAN.—We had agreed that the inspection should be done by Land Commission valuers?—That being so, the Estates Commissioners would not alter the price.

59532. Most Rev. Dr. O'DONNELL.—They would be not paid for inspection but valuation for the Estates Commissioners?—They inspect our holdings, and spend a large amount of money on the inspection.

59534. Sir ANTONY MACDONNELL.—Not the Estates Commissioners. That is the Land Commission—an entirely different thing?—The Estates Commission is a department of the Land Commission.

59535. They don't inspect for security, these men who come down to look after your affairs. They merely inspect for occupation. It is done under Commissioner Lynch as a preliminary to recording the price of it?—They inspect for occupation, although the estate bailiff or other person with local knowledge swears an affidavit within ten days of date of vesting holding that tenant-purchaser is in occupation.

Sir ANTONY MACDONNELL.—That does not interfere with you at all. They don't clash with you.

59536. Sir FRANCIS MOWATT.—What percentage of the purchase money is represented by inspection? What does it cost—one-half per cent.?—I could not say. I think that the inspection in these scattered cases costs a great deal. The Land Commission could tell the cost.

Sir ANTONY MACDONNELL.—The Estates Commissioners' outdoor staff, all told, costs £12,000 a year.

Sir FRANCIS MOWATT.—How much land do they inspect in a year?

Sir ANTONY MACDONNELL.—They have paid out £19,000,000 in four years.

59537. Sir FRANCIS MOWATT.—Their cost would be £48,000 in four years, for that amount of land would be very small. It is hardly worth considering?—I am aware that a very large proportion of the estates in respect of which agreements have been lodged are not yet inspected.

Sir ANTONY MACDONNELL.—That money has been paid out.

59538. Sir JOHN COLOMB.—You are talking about the landlord and the Congested Districts Board agreeing to a gross price subject to review. The landlord in agreeing to this price would not know whether he was going to get it or not. It would not be a firm offer?—It would not on my first statement, but if the suggestion were acted on that all the untenanted lands and non-judicial holdings on an estate should be valued by the Land Commission, the statutory rent-fixing body, the Board could make a firm offer, because the price would not be liable to deduction.

59539. CHAIRMAN.—If the Estates Commissioners would not take the price as fixed?—Unless the zone limit be abolished I don't think they would have the power to object.

59540. Most Rev. Dr. O'DONNELL.—Would there be any difficulty about that subsequent valuation in the future more than exists now with reference to sales to tenants by the Congested Districts Board?—The Congested Districts Board up to the present has been obliged to guarantee against default of annuities on all the sales. That guarantee should not be applied to the larger volume of work you now propose, because it is an accumulating liability every year, and would seriously affect the Board's financial position in the course of a few years.

59541. You would suggest then that the valuation by the officer of the Land Commission should be taken itself as sufficient to satisfy in the case of the sale subsequently from the owners or the Congested Districts Board to the tenants?—Yes. I would say where the prices fixed were within the zone limits as applied to judicial holdings, or rents assessed by the Land Commission valuers as equivalent to judicial rents that they could not alter the price.

59542. Sir ANTONY MACDONNELL.—If you are within the zone limits the Estates Commissioners would have to accept, but where you are not within the zone limits, with non-judicial rents and so on, would you have the Estates Commissioners accept, without any challenge, the recommendations of the valuers?—The Land Commission valuers.

59543. They don't do that now. You make the report of the subordinate binding upon his superior?—I think it is rather absurd myself to assume that a person sitting in an office in Dublin knows more about the value than a man who walks the land.

59544. There are diverse valuations?—Yes, but a person in Dublin who has not seen the holding can't be a judge of its value.

59545. It is the judgment of a man whose judgment is trained by long experience. It is not a whim?—How can that be? I hear it is a common thing to alter the valuer's estimate, but I don't see any justification for thinking that a person, no matter how experienced, who never saw the holding, can form a better judgment on its value than the valuer, who inspected it, especially when he is a man stated to be selected for his competence as a valuer.

59546. You know perfectly well that two valuers do not agree?—I say that the opinion of either is better than that of a man who never saw the place.

59547. Mr. KAVANAGH.—I think there will be difficulties in any half-way house in the question of buying estates?—That being so I think I may repeat what I have said already that there is practically no difficulty in the way of the Board undertaking to pass those cases through provided the cost is not included in the proposed output of a million, and that the necessary expenditure to cover the administrative duty is provided.

CHAIRMAN.—There again you increase your staff to an extent which, so far as I can understand, is not estimable. These conduit pipe duties will necessitate a staff, and how big that staff will be and what it will cost we cannot estimate.

Mr. BRYCE.—Sir Francis Mowatt has just shown that the cost will be very small as regards inspection.

Sir FRANCIS MOWATT.—It is about 5 shillings per cent. for inspection.

Sir ANTONY MACDONNELL.—It will be more than that, because as Mr. Callan has just pointed out to me in most direct sales it is not inspection of land for value; it is only inspection for occupation. The actual inspection of land is only in regard to sales under section 6 to the Estates Commissioners, and sales under section 5 where the question of price between landlord and tenant comes in. So if you had it as you now propose to have it the actual inspection and valuation of the land would be greater.

Sir FRANCIS MOWATT.—Possibly, but as far as the figures go it would be a small proportion on the purchase of an estate.

59548. Most Rev. Dr. O'DONNELL.—Whatever the administrative difficulties or wherever the valuers come from, in the suggestion that there would be a valuation from the Estates Commissioners there is nothing new; it is only that the valuation is done under new auspices. It would be done if no arrangement such as is now contemplated were carried through?—No matter what body does it, all these things which we are discussing must be done by some one body. Some one body must separate estates needing treatment from those not needing it.

59549. CHAIRMAN.—Would you exclude the whole of the estates which don't need treatment at all? Don't you think that £1,000,000 a year for the rest of them would be an adequate provision to make? Don't you think that that would mean that the estates would pass through within a reasonable number of years?—It is very difficult to estimate it, but on the figures that Mr. Callan prepared it would take a considerable time.

59550. It would not take more than 25 years?—About that—from 17 to 30 millions' worth of property.

CHAIRMAN.—That is excluding all the estates which don't need improvement at all and including all the estates where even small improvements are necessary?

Mr. Callan.—Yes. Mr. Doran made an estimate, necessarily a rough estimate, that if you exclude estates which do not need improvement you would exclude one-fourth of the area.

Witness.—You would allow one-fourth of the area to pass through. That was a rough estimate.

59552. CHAIRMAN.—If we admit we cannot get over this difficulty of dividing the estates, if we say we won't attempt it, and merely have the two classes, those estates which can be certified by the Board as being absolutely free from congestion, and the other class where there is congestion which the Board must be prepared to buy *in globo*, even though there may be only 10 per cent. of congestion; then we are forced to admit that the problem may take more than from 17 to 30 years to settle at £1,000,000 a year?—It would, if estates, or portions of estates, that don't need treatment are included in the output of £1,000,000 a year.

Mr. BRYCE.—Surely it will be one-fourth of the whole, if Mr. Callan's estimate is that one-fourth of the whole does not require treatment.

Mr. Callan.—In the whole of the area which it was suggested might be assigned to the Board there are, in round numbers, 180,000 holdings. The valuation of those holdings is under £2,200,000. Of the 180,000 holdings close on 70,000 have either been sold or agreed to be sold. That leaves 110,000 holdings that remain to be sold. That is to say, of 180,000 holdings eleven-eighteenths remain unsold, and seven-eighteenths have been sold, or agreed to be sold. If you reduce the valuation of the 180,000 holdings, which is just under £2,200,000, by seven-eighteenths, that leaves, roughly, £1,300,000. That is to say, 110,000 holdings remain to be sold at a valuation which is estimated at £1,300,000. If all that land passed at 20 years' purchase it would be a matter of £26,000,000, and at the rate of £1,000,000 a year the process would take 26 years. If 30 years' purchase were given, £39,000,000 would be required, and then it would take 39 years at the rate of £1,000,000 a year. In either case the amount that would be sold by the Board is over-stated, and therefore the time is over-stated. There is a certain amount which would not be purchased by the Board because it does not need treatment. It was suggested in the estimate submitted to the Commission that that would be additional to the £1,000,000 a year. Mr. Doran says, as a very rough estimate, that the amount of land which might be certified for direct sale would be one-fourth. Therefore if 20 years' purchase was the average price instead of £26,000,000 being required for sales through the Congested Districts Board it would be only three-quarters of that, which would be under £20,000,000, which, at £1,000,000 a year, would take less than 20 years. And again, if the price ran up to 30 years' purchase you would exclude the one-fourth of £39,000,000. That would bring it down to under £30,000,000, which would mean under 30 years. That is how those original estimates were made.

59553. If the Board were to deal with land at the rate of £1,000,000 a year you think that it would increase your outdoor staff by £30,000 a year?—Yes, if £1,000,000 a year were applied to purchase of estates that needed treatment. In respect of those, the cost of my staff would be increased by £30,000 a year.

59554. If £1,000,000 a year is to go on estates that require treatment, that will increase the expenses of your outdoor staff by £30,000 a year?—Yes; and the additional duty in relation to portions of estates to pass by direct sale would increase the expenses only in small proportion.

59555. Most Rev. Dr. O'DONNELL.—If we take it you want £30,000 a year in addition to your present income for the treatment of land needing treatment I would ask Mr. Doran what class of expenditure for staff would be needed on the land which passes direct to the tenants; it would be altogether different from the expenditure on the million's worth of land?—The expenditure would only be the same as if it passed through the Estates Commissioners—administrative.

59557. Try now to add what you think that amount will be to your £30,000 a year which you require additional in order to pass a million's worth of property that is ameliorated. How do you add for the property that is not improved? Take half a million's worth of that property or a million's worth of it: what additional expenditure will they need on staff for that process?—There would be no expenditure, except that incurred in connection with the preparation and lodging of the maps and agreements, such as the Estates Commissioners have to incur in cases of direct sale.

59558. Sir FRANCIS MOWATT.—What would you put that at?—I have no basis for an estimate, except what Sir Antony stated as to cost of dealing with £19,000,000 worth of property paid for under Act of 1903.

59559. Would another £10,000 do it?—I should think that amount ample.

59560. Then allowing very liberally it would be £40,000 a year?—Yes.

59561. CHAIRMAN.—Will you go on, Mr. Doran? In the particulars of loss* which I have prepared I only include the estates which have either been sold or are ready for sale. There are a great many others in course of treatment which are not yet ready for sale. The estates to which I refer are classified as follows:—Class A.—Poor tenanted estates on some of which there was a small proportion of untenanted land available for migration and the enlargement of small holdings. Class B.—Very poor tenanted estates on which there was practically no agricultural land available for migration and enlargement of holdings, and upon which the improvements effected were mainly re-arrangement of the holdings, improvement of buildings, road-making, and drainage. Class C.—Migration estates comprised wholly or mainly of untenanted land used chiefly for migration. The total purchase price of estates A, B, and C is £317,639, and the total amount spent in improvement works is £81,249, and the total net loss £41,152. The total poor law valuation is £12,457, and the total area is 53,627 acres, of which 10,558 acres were untenanted, and 43,069 acres were tenanted. Class A comprises 76·1 per cent. of the gross purchase money. This class, comprising poor estates, on some of which there was a small proportion of land available for migration and enlargement, were the estates that incurred the least loss for effecting a substantial amount of improvement in the condition of the occupier. Class B comprises 15·6 per cent. of the gross purchase money. Class B estates are those classified as being very poor, which need a large outlay to make any change in their condition, and where there was little or no land available for enlargement. The only improvements effected for the large outlay were improvement of dwellings, re-arranging the holdings, and making roads and drains. The Board have not materially increased the number of economic holdings.

59562. Sir ANTONY MACDONNELL.—That is Class B?—Yes; such a place as Carna, in Galway, or similar estates. That would be amongst the poorest of that class perhaps. Class C comprises only 8·3 per cent. of the gross purchase money; that is untenanted land. Of the estates purchased under the Act of 1903, which are now ready for sale or sold, speaking in round figures, three-fourths of the land dealt with was Class A, poor estates, where there was considerable room for development and improvement by drainage and road-making, the improvement of dwellings, consolidation of holdings, and, to some extent, by migration and enlargement of holdings. I would put the Dillon Estate in that category, and the De Freyne Estate would be included in the same class. Class B would be represented by those poor estates round about Mallaranny and similar poor tenanted lands elsewhere, which, no matter how much you spend on them, you cannot so improve that the people could live on the land alone.

59563. Most Rev. Dr. O'DONNELL.—The expenditure in that case is very largely on houses?—Frequently. Where there are rundale holdings it is very largely striping the holdings, the land usually being of such a poor character that you cannot charge such outlay to the land. It costs more to fence in a twenty-acre holding, half of which is rock, than it will to fence through arable land. In the one case you may be able to charge the land with the outlay, in the other case you cannot.

59564. CHAIRMAN.—Class C seems to me to be very important?—Yes.

59565. But apparently you have only bought 8 per cent. of it out of the £317,000 you have spent on land purchased?—These lists do not represent all of what we have bought. I am only giving you actual figures of estates we have ready for sale or have sold under Act of 1903.

59566. Only 8 per cent. is grass land?—Only 8 per cent. is estates wholly or mainly untenanted.

* See p. 46.

Jan. 22, 1908.

Mr. Henry Doran.

59567. That shows that there has been extremely little migration work done in comparison with your other work?—Comparatively speaking, yes.

59568. Sir ANTONY MACDONNELL.—You may say absolutely, because the migration work has been extremely small. I think we had better face that fact?—We will come on to it. You can ask me any question you like it afterwards. The total area of Class C is 3,000 acres of land.

59569. CHAIRMAN.—Grass land?—Yes.

59570. Sir JOHN COLOMB.—You have got 10,000 acres of untenanted land at the bottom of the first page of your memorandum. You give a total area of 53,627 acres, of which 10,538 were untenanted?—Altogether untenanted land, but there would be untenanted land in A as well.

59571. This is the whole lot?—Yes; but I am talking of C alone now.

59572. Most Rev. Dr. O'DONNELL.—You are talking of the area of land to which migrants have been moved?—I am talking of untenanted land included in C. A contains some untenanted land. B contains little or none. C is practically altogether untenanted land. 10,000 acres is the area of the untenanted land included in A, B, and C. The percentage of loss on the treatment of estates was as follows:—Class A 9·4 per cent. of the cost price of the estate; Class B 21·6 per cent. of the cost price of the estate; Class C 28·8 per cent. of the cost price of the estate. That is to say, Class A was put through hands at a comparatively small loss, being estates capable of considerable development, containing some untenanted land, and not being the poorest class of tenanted estates. In Class C, which was altogether migration, the loss was 28·8 per cent. The average loss upon A, B, and C was 12·9 per cent.

59573. Sir FRANCIS MOWATT.—Can you tell me the extent of Class C?—I hand in a schedule* which shows it. The average loss on all three classes was 12·9 per cent.

59574. Mr. SUTHERLAND.—What is the statutory limit to what you are allowed to spend on estates?—There is no limit; but you are now in search of some information that will enable you to base an opinion as to the average loss which the Board might sustain in dealing with, say, a million's worth of property per year, and I give you these particulars in the hope that they may assist you. You have, in lists A, B, C, in round figures one-third of a million's worth of typical estates.

59575. Are you satisfied that this 12·9 or, say, 13 per cent. would be sufficient all over to meet demands?—No. I would rather you would allow me to finish my memorandum before I answer that. You have here the information that in dealing with these estates, the cost price of which was nearly one-third of a million, £317,000, the average loss was 12·9 per cent.; but you have to analyse the character of the estates that make up the group. That is very important.

59576. Sir ANTONY MACDONNELL.—You would not say that sufficient relief has been given in the case of the Class A estates?—No.

59577. Consequently if we aim at the relief which we ought to give it will be very much more than 12 per cent.?—Very much more. That is why I think it so necessary to emphasise the classification. When you come to analyse this group, on which the average loss is 12·9 per cent., you find that 75 per cent. of it is estates which needed treatment, but which responded to treatment like the Dillon estate, and on that 75 per cent. the average loss was only 9 per cent. on the purchase money; but when you came to settling migrants and dealing with them as economically as possible, the loss was nearly thirty per cent.

59578. May I take it that 75 per cent. was not improved to the extent to which you would be glad to improve it?—It is not at all brought up to the extent that anyone could say is satisfactory, but we have done a lot of useful work on these estates.

59579. Consequently you cannot say that the 9 per cent. is any indication of what the loss would be in the future probably?—No. under more satisfactory treatment.

Sir FRANCIS MOWATT.—On the assumption that you are going to make it a perfect job?

Sir ANTONY MACDONNELL.—A considerably larger number of people should have been migrated than you were able to do.

59581. Sir JOHN COLOMB.—Also you were restricted in this way, that you could only deal with properties that were offered to you, and that the outlay and expenditure there are not quite the same as where you have the power of acquiring property generally?—Yes. That is very important.

59582. Therefore, this is dealing with the loss on properties dealt with under circumstances that are going to be changed?—Yes; that ought to be changed.

59583. Therefore, this is no real guide to the loss and expenditure where the Congested Districts Board have powers to acquire property wherever it is wanted for the relief of congestion?—It is not an absolute guide, but it does afford you, as I think you will see later on, reliable data for arriving at an opinion in the matter.

59584. What I mean is that in Class A the loss is only 9·4 per cent. You were simply reduced to that because you could not do anything else?—We did all we could for those estates under present conditions.

59585. You could not take any large portions of Class C in relief of Class A?—We had not much of Class C. We did all we could for Class A, having regard to the number of people who were willing to leave these estates. Only a very small proportion of them would migrate to the lands we could offer. We did not refuse to migrate anyone who would migrate to the lands available; but we had so little land on hands that intending migrants had but a small area to select from. Some of these estates are quite near grass farms that we had no power to acquire, and we had to sell a considerable number of uneconomic holdings, although grass farms were near them.

59586. CHAIRMAN.—You say you did your best with the amount of grass land available. What was the chief reason that you had no more grass land?—We could only endeavour to buy those that were offered to us, and we did buy most of them.

59587. You were not handicapped with want of funds?—No.

59588. You had plenty of funds to buy if you got the landlords to sell?—I think so. At least we have never come to that point when we were told that there was no money to pay for estates.

59589. Take the Dillon Estate. If you had compulsory powers that would have enabled you to buy more grass land, do you think you would have been able to have migrated more people?—Yes; if we could have got the lands that we would have selected, say, within ten miles or so of the estate.

59590. If you had compulsory powers to enable you to purchase grass lands suitable for migration, you think you would have been able to prevail upon more people to migrate on that estate?—I am quite sure. In fact, I believe that a number of the Dillon people will migrate if the Board can get lands within ten miles. Several of them have already applied for holdings on grass lands purchased within the past two years.

59591. That would enable you to make a better job on the Dillon Estate?—Yes.

59592. Would it also increase the amount of your loss?—We dealt with the Dillon Estate without any loss, and the Dillon Estate, being half the volume of the work completed, up to a date mentioned in my evidence at your first sittings, had the effect of reducing the average percentage of loss to 6 per cent. on all the estates dealt with, simply because half the volume cost nothing.

59593. Most Rev. Dr. O'DONNELL.—It does not come into these figures at all?—No.

59594. CHAIRMAN.—It is not fair to take the Dillon Estate as an example?—On the other hand, here are 75 per cent. of the cost price of the estates dealt with under Act of 1903, some of the Dillon Estate type, and our loss is 9 per cent.

59595. I suppose the same handicap applies all round?—Yes.

59596. If you had compulsory powers to obtain grass lands in the neighbourhood of these estates you would have been able to migrate greater numbers of people?—Yes.

59597. The loss, therefore, would have been greater?—Yes, but the results would have been more satisfactory.

59598. If you had compulsory powers from the beginning your loss would have been more than 9 per cent. with regard to the 75 per cent. in value of estates?—Yes; and it will be more if the Board put them into anything approaching a satisfactory condition. It is only where the condition of the people is slightly ameliorated that the loss can be small.

* See p. 46.

Where you have to apply radically ameliorative treatment to poor tenanted estates, like portion of the Armstrong Estate and others, it is only where there happens to be a large area of grass land on the estate that you can enlarge all uneconomic holdings, and make a really satisfactory settlement without a large loss.

59599. Sir ANTONY MACDONNELL.—What was your loss on the Armstrong Estate?—About 15 per cent., although the untenanted land was on the estate.

59600. CHAIRMAN.—Are you satisfied with the Armstrong Estate?—Yes.

59601. Do you call that an ideal arrangement?—Approaching it.

59602. Most Rev. Dr. O'DONNELL.—It is a case where in the removal of congestion land could be found for enlarging holdings on the estate itself?—Yes.

59603. Therefore, it is not a parallel case to that in which people would have to be transferred to a distance?—No. That is why substantial improvement can be effected cheaply.

59604. Sir ANTONY MACDONNELL.—You had not to build new houses?—Very few new houses.

59605. CHAIRMAN. Is there any estate you have dealt with at all since the beginning where you have had sufficient grass land to enable you to migrate all the people who wanted to migrate and where the arrangements you were able to make have been, in your opinion, as perfect as could possibly be made there; is there any estate that you can give us that will show the loss that would be any guide to us as regards future operations, where you would have power to obtain grass land?—The Armstrong Estate is a fair illustration of the results under favourable circumstances. Although the untenanted land was some distance from the tenanted portion it was within the ambit of the estate, and it cost very much less to rearrange and dispose of, inasmuch as the greater part was given as enlargement.

59606. Suppose that the grass land was not on the estate, and you had to buy from somebody else, say, compulsorily, to what extent do you think that would have increased your loss?—We should have had to migrate at least fifty people out of it, and it would have increased the loss. It would have greatly increased, perhaps doubled, the actual loss.

59607. Most Rev. Dr. O'DONNELL.—It would have been over 30 per cent.?—Probably.

59608. Whereas it was within 15 per cent.?—Yes.

59609. Mr. SUTHERLAND.—Do you count loans in that?—No, we don't count loans, but we count advances on the sale prices of the holdings. Any sum included in the sale price of the holdings in respect of buildings is taken into account before assessing the net loss.

59610. These are just grants, not loans?—Yes; grants or advances to be repaid.

59611. Sir ANTONY MACDONNELL.—Look at the details. Would you have paid any more for the land if you had to buy the land, say, twenty miles off? Would you have paid any higher number of years' purchase for the land than you did in the case of the Armstrong Estate?—We would not.

59612. The land would have been the same?—About the same, or perhaps a little less.

59613. And the other expenditure would have been on building the houses?—Yes; fencing and road making.

59614. In the new place?—Yes.

59615. Preparing the holdings?—Yes.

59616. You say you would have migrated fifty families: how much would it be per family?—I don't believe we would have got the fifty to go.

59617. Assuming you would?—Assuming we would, our net loss would be at least £100 per family. That would be £5.000.

59618. Mr. KAVANAGH.—To build houses and all?—Yes; the net loss.

59619. Most Rev. Dr. O'DONNELL.—A certain portion of the expenditure would be put on the annuity, but the portion that you would not put on the annuity causes the £5.000 extra?—Yes.

59620. Sir ANTONY MACDONNELL.—Would you have got anything for the goodwill of the places they had abandoned?—We would; but that would be credited to the migrant in the price of his new holding. That is our plan.

59621. But if you gave him the goodwill of his new holding you would not also credit him with the price of the holding which he had abandoned?—No. Our procedure is this: it is explained really in this memorandum later on, but I will give it to you now. We buy, say, £10 worth of land at twenty-seven years' purchase for £270. That is the average price which the land cost us. A man who has a £5 holding proposes to take a £10 holding from us. We value the occupation interest of his holding. The rent, we will say, is £5. If he was an improving tenant he might have reclaimed portion of it; he might have built a house and offices on it; and, we will say, for the sake of illustration, that the gross value of the land in its present condition is estimated by us at £7, although the rent is only £5. In its present condition the rent is estimated at £7. We give him £7 worth of the new holding for £5, and we give him that £7 worth at the price at which we were prepared to sell him the £5 holding if he had not migrated; that is to say, if we had bought that £5 holding from the landlord at twenty years' purchase we would figure out the price of the new holding like this. We would say, "If you don't migrate we will sell you your present holding at the price we paid the landlord, twenty times £5, that is £100; we are going to move you on to a new holding, and will give you £7 worth of land on the new holding for £100." We give him £7 worth of the new holding at the price paid for his £5 holding, because £7 of the new is only the equivalent of the gross annual value of the old holding; and we charge him twenty-seven years' purchase for the remainder of the land included in new holding; that is, if we give him £10 worth altogether we charge him twenty-seven times £3 for the remainder. We would give him the new holding at £181 for the land, *plus* such addition as we consider we ought to make for the new buildings we erect. We cannot erect buildings affording the minimum desirable accommodation for a family under £120. The annual value of the land comprised in our new holdings is generally not less than £15.

59622. Mr. SUTHERLAND.—That is a moderate figure?—Yes. That is for the minimum accommodation. We say to the migrant, "We don't suppose you will be satisfied with the offices we put up. Double them or treble them within the next year if you like." If the value of the land in the holding was only £10 a year, the most we would put on the buildings would be one-eight of the value of the land; that would be an annuity of £1 5*s.* on the buildings in addition to the annuity on the land.

59623. Sir ANTONY MACDONNELL.—Then you would have given him the difference between the capital value of the buildings and of the £1 5*s.*?—Yes. An annuity of £1 5*s.* would, in round figures, represent a capital sum, £40, and the cost of the buildings would be, say, £120, we would lose on the transaction £80, the difference between £120 and £40. We would not lose on the allowance that we make for the occupation interest of the surrendered holding, because we would charge for his vacated land the sum allowed for occupation interest in addition to the cost of the fee-simple.

59624. Mr. SUTHERLAND.—You would get it from the people who got his land?—Yes.

59625. CHAIRMAN.—All this is an annuity arrangement. No cash passes?—Yes. No cash passes.

59626. Sir JOHN COLOMB.—His occupation interest is not merely in the land but in the house?—Yes, if it is a substantial one, but if it is not we don't allow much, if anything, for it.

59627. The incomer is to be charged the occupation interest you credit him with?—Yes.

59628. If you pull down the house?—If we do we lose the amount allowed for the building.

59629. If you don't pull down the house how are you relieving congestion?—If we get a migrant to go who has a fairly good house we will always have somewhere near a more or less helpless person with a bad house, and we move that person into the migrant's house and knock down the bad house.

59630. You move, say, a widow from another house into the house of another person, whose interest has been bought?—Yes, and thus get them into better houses. If we fix the rent of the house at 10 shillings a year in estimating the occupation interest, we charge the woman or other person who gets the migrant's buildings 10 shillings a year for the building in the rent.

59631. And you pull down her house?—Yes, if it is a bad one.

59632. Mr. SUTHERLAND.—Do you mean houses to which no land is attached?—No, but in valuing the holdings we first of all put our acreable rents on the

Jan. 22, 1908.

Mr. Henry Doran.

land; we then examine the buildings, and if they are in good repair we put on a separate rent for the buildings in connection with the holding. The average loss on A, B, and C together was 12·9 per cent. As already stated, the tenanted estates A and B comprise 91·7 per cent. of the gross cost price, and the untenanted land, Class C, was only 8·3 per cent. of the gross. If, as recommended in my evidence, the estates dealt with each year by the Board should comprise two-thirds tenanted and one-third untenanted land, the loss if calculated for one-third untenanted in the same proportion as it has actually been on the estates, as shown on list C now handed in, would make the loss on the entire group of estates, comprising two-thirds tenanted and one-third untenanted work out at 17·2 per cent. To make that clear I told you that the gross value of the entire group, A, B, and C was £319,000, but only 8 per cent. of that was untenanted land, and as Sir Antony MacDonnell suggests, the consequence was that we were obliged at the time to sell the group with many uneconomic holdings, not having a sufficient area of suitable untenanted land. If we raise the proportion of C land to 33 per cent., or one-third, leaving A and B at two-thirds, the average loss on the group would work out at 17·2 per cent.

59633. CHAIRMAN.—It is like this: the more grass land you buy and the more bad estates the greater the expense?—Yes.

59634. If you want to deal with the very poorest land where the congestion is greatest you must have a large amount of grass land on hands to relieve it?—You must, if relief is only to be by enlargement of holdings.

59635. And the more grass land you have the greater will be the loss?—Yes.

59636. Sir. FRANCIS MOWATT.—On the other hand, the less congestion the estate has that you purchase the smaller the amount of grass land required?—Yes, and the less loss incurred in treatment.

59637. If you got an estate on the verge of being economic very little grass land would be required?—Yes, and very little loss would be incurred.

59638. And by enlarging the district, as we propose to enlarge it now, until it covers the whole of Connaught and other counties, the area with which you will have to deal will contain a great many more of such estates that are almost economic?—Certainly.

59639. Therefore to that extent the proportion of loss will be reduced?—Very substantially, if you allow me to include all.

59640. Mr. KAVANAGH.—All the grass must be on Class C, but you relieve Class A and B, and in that way is it not unfair to put all the loss on Class C?—No. I said that A contains a small proportion of untenanted land.

59641. But naturally the greater loss occurs on Class C?—Yes. That is the actual loss, which, as a matter of account, might all be debited to the estates benefited.

59642. You relieve Class B and A by it?—Yes; and taking A, B, C together, you get the losses of each class merged.

59643. If there was no Class A and B there would be no necessity for Class C?—No; that is to say, if you did not remove people from Classes A and B you would leave C grazing land as it is at present.

59644. It is not a loss in itself, but it is a loss because it relieves A and B?—Altogether. I consider that these figures, based on actual facts, afford the best guide to what the minimum loss might be in dealing in a similar manner with estates needing treatment in the counties containing congested districts. There is not one of these estates that did not need treatment. No estate was bought by the Board that did not.

59645. CHAIRMAN.—Then that means that you think that 17 per cent. is about the correct figure to allow?—I think it is very near it—ascertained, as it is, from the results of treatment of estates purchased and prepared for sale since the passing of the Act of 1903.

59646. You make a reduction for the sort of estates that Sir Francis has just alluded to?—Yes. This would not include any estate except those needing treatment.

59647. Sir FRANCIS MOWATT.—There might be a very slight change in it?—If I was allowed to include estates which only need very slight treatment it would reduce the percentage substantially. I have shown in these returns the actual amount expended on improvements on each estate.*

59648. Most Rev. Dr. O'DONNELL.—I think you do afterwards reduce the percentage from 17 to 15?—Of course this is only a means of roughly estimating it, nothing more than that.

59649. CHAIRMAN.—Those figures go on the assumption that you are dealing with a very poor class of estate. Suppose you had in future to operate over the whole of the area that we have mentioned, what reduction do you think could be made from the 17 per cent?—I estimate that one-fourth of the estates could be passed through without any necessity for treatment, and if that one-fourth be included in the output, and sold through the Board, only a small loss would be incurred, and it would reduce the percentage of loss on entire sales by 4 to 5 per cent.

59650. Sir ANTONY MACDONNELL.—Excluding them altogether?—Excluding them I don't think the figure could be reduced to much less than the figure I state, 15 to 17 per cent.

59651. CHAIRMAN.—Surely we need not go into the question of the estates that do not require treatment at all. They can be passed through without loss. Then there are the very poor estates, such as you have had in your mind here, and also the estates which require some treatment, but not very expensive treatment, because either the grass land lies very adjacent or because the great majority of the tenants are economic tenants. Putting those two classes together, what deduction do you think ought to be made from the 17 per cent.?—I think that the estates on lists A, B, C, when grouped, indicate a typical average.

59652. Most Rev. Dr. O'DONNELL.—I fear you did not state to us that one-fourth of the land might pass without treatment on estates that had no parts of them congested?—No; what I meant was in the whole of the counties containing congestion.

CHAIRMAN.—They don't come into it at all. We need not consider them.

59653. Most Rev. Dr. O'DONNELL.—I am afraid that Mr. Doran's one-fourth includes two classes, those that contain no portion congested and those that contain small portions congested?—Yes; all the estates, and portions of estates, that might be excluded from purchase by the Board.

59654. Comprising the whole of estates that do not need treatment, and estates, portions of which are capable of being classified as estates, which portions do not need treatment; is that so?—Yes.

59655. CHAIRMAN.—If you go into Connaught tomorrow and buy a block of a million's worth of land, tenanted and untenanted, and proceed to treat it, what do you imagine would be the sort of average loss that you would incur?—I think really that the figures I have given on lists A, B, C afford the most reliable data available for making such an estimate.

59656. Sir FRANCIS MOWATT.—Your figures profess to deal with land such as you have been dealing with. Now, we want to consider an entirely different state of things. You are coming into districts in which the congestion is not nearly so great. Many of them are almost economic holdings, but upon a lot of those estates there will be a few of these not quite economic which will therefore require some slight treatment. It is obvious that the percentage of expenditure or loss in treating that very small portion of the estate cannot be anything like the amount you will lose in dealing with a very poor estate. You said that under those circumstances, which are not included in those figures, the reduction would be very great on the 17 per cent. I want to ask you have you formed any estimate of what the figure should stand at instead of 17 per cent. loss?—The 17 per cent. is based on the assumption that we are only applying treatment to the portions needing it and excluding the remainder. Consequently if you include the entire of an estate or area one-fourth of which needs no treatment, that will reduce the percentage of loss very substantially.

59657. What do you mean by very substantially?—I told you I based the 17 per cent. loss on the assumption that one-fourth of the lands in those counties would be excluded, and if you include the entire

59658. You are estimating that in this new district to which you are alluding one-fourth of the land would not require treatment?—Yes.

* See p. 46.

59659. Therefore you would reduce the 17 per cent. loss practically by one-fourth?—Yes—to from 12 to 13 per cent. of the entire, one-fourth of which involved no loss.

59662. Sir JOHN COLOMB.—What you mean is, that suppose you bought the whole county one-fourth of the land in the county would not require treatment?—Yes.

59663. Three-fourths would require treatment?—Yes.

59664. You estimate that the average loss upon the three-fourths, that is the estates requiring treatment of some sort or another, would, in the aggregate, amount to 17·2 per cent.?—Yes, but if you were to have the same expenditure, and were to be allowed to include all the estates before calculating an average that 17 per cent. would be reduced approximately by one-fourth.

59665. CHAIRMAN.—The point is this: excluding, first of all, the one-fourth that don't require treatment at all, that leaves you 75 per cent. of estates that require treatment of some sort?—Yes.

59666. The great majority of estates may be estates of the class you have already dealt with which are set out here. With regard to these estates, you tell us you think that 17 per cent. is about the proper amount of loss, but my point is, that within that 75 per cent. of estates there is another class of estate that you have not dealt with at all hitherto under your Board, the estate which needs a certain amount of improvement, but not any very great improvement. It is not classified in any of your A, B or C. It is not a very poor estate; it is not an estate which has only a small amount of grass land, nor is it an estate which is really mainly grass land. It is an estate, 80 or 85 per cent. of which perhaps is economic, but a small proportion, 20 or 15 per cent., is uneconomic. You have not dealt with that class of estate at all, because it has not been the policy of the Board to devote its attention to that class of estate?—No.

59667. You have looked to poorer estates than these and these were crowded out. If we give you the whole of Connaught you will find within the 75 per cent. which you have got to treat some estates of that kind?—I don't think so. I think they are in the one-fourth that are excluded.

59668. Most Rev. Dr. O'DONNELL.—In the 75 per cent. Mr. Doran, I think, includes only land—I won't say estates—requiring remedial treatment. In the 25 per cent. he not only includes estates that have no portion of them congested, but also includes that portion of estates having a little bit of congestion, which is not congested. Am I right in saying that in the one-fourth you include, first, estates that have no portion congested, and second, estates that have a little bit congested, and that you include the non-congested part of those estates?—In my replies I have only one procedure before my mind all through. It is this, that the Board would continue to do what they have done in the past, and only buy estates needing treatment.

59669. Do we take it your 17 per cent. of loss is for estates of every class requiring remedial treatment?—Yes.

59670. Therefore in the 75 per cent of estates requiring remedial treatment you have no portions of estates or large portions of estates that don't require remedial treatment?—No.

59671. Now, you think that the only question you require to address yourself to is this. Suppose we take as one-fourth the portions of estates that are not congested and take them over to the other side, what reduction then could you make on your 17 per cent. Within the 75 per cent. you have nothing but land requiring extensive remedial treatment. Suppose you take over to the same side of the line the purchase of estates that don't require remedial treatment, what are your deductions on the 17 per cent?—I am not satisfied that the problem is before you in the way in which it appears to me at all. I must ask you to let me try to explain it again.

59672. Mr. BRYCE.—Take the case of the Dillon Estate, you did that without loss?—Yes.

59673. If you had bought it since the passing of the 1903 Act or just before it, when prices were rising a bit, you would have lost about 11 or 12 per cent. Suppose the Dillon estate had not been sold and you had got to buy it now and treat it, what would be your loss on that particular estate?—I daresay we would lose 10 per cent. now.

59673A. Going into the market to buy the Dillon estate at the rate of prices now existing and under the circumstances now existing, what would you calculate you would probably lose in the treatment of it to-day?—I think about 10 per cent.

59674. No more than that?—No, if we only dealt with the estate as we have done.

59675. Most Rev. Dr. O'DONNELL.—That is under the 17 per cent. Surely the Dillon estate is as bad an estate as you could treat?—We have not put it into a satisfactory condition. More than half the holdings on the Dillon estate are uneconomic holdings. We could not get the land for them. We made the best job we could within the boundaries.

59676. If you were treating it in the way you would treat it now if you had sufficient untenanted land, what would it cost you more than 10 per cent.?—It would cost at least 20 per cent. to put it into what I could call a satisfactory state.

59677. Lord Dudley's question is this. The Dillon estate was as bad as you could have: are you not likely to have in your 75 per cent. certain estates not requiring much treatment, the average loss then being very much less than 17 per cent.?—Yes. I have some on the list of A estates I am submitting to you. For instance, I will give you a case to the point that appears here. The Colles-Sandes estate cost £71,000, and the loss on it was only 2·8 per cent.

59678. CHAIRMAN.—Are not you likely to have estates of that sort?—Yes; and there is a proportion of them on these lists. I think it is a fair proportion. That is what I have meant by saying this group of estates, A, B. C lists, is typical of the volume of the class of estates the Board would deal with within an average year.

59679. And you have taken them into consideration in your 17 per cent.?—Yes. There is £71,000 for the estate mentioned, and there is a loss of 2·8 per cent. That is included in Class A, and helps to keep the average loss low.

59680. Won't you have more of that sort of estate now that your area is going to be enlarged into non-scheduled districts than you had before, when you had only the scheduled districts to deal with?—I am estimating that you would not have a larger proportion than in this list if you do not buy estates or sections of estates that do not need treatment.

59681. Sir FRANCIS MOWATT.—That list is what has been done already?—Yes, under Act of 1903. I commenced by saying I thought this group of estates fairly typical.

59682. CHAIRMAN.—Your list must be based on the area you have hitherto to deal with, which, being a scheduled area, is a very poor area. You have got a certain proportion of estates on that area which have cost you very little My point is, now that your area is going to be enlarged by the addition of richer territory is not it probable you will find a greater number of estates of that class in that territory. You have just mentioned one estate on which you only lost 2 or 3 per cent.?—Yes.

59683. Therefore won't the average loss be materially reduced?—Yes, if you include all estates in the enlarged area.

59684. These are not estates which you would not deal with. Those would be estates you would treat. They would not be the 25 per cent. that you would pass off and not deal with at all. They would be in the 75 per cent. of estates with which you would have to deal?—If there was a larger proportion of estates, or portions of estates, not needing expensive treatment than in this list, that would reduce the percentage of loss on the entire.

59685. CHAIRMAN.—That is the whole point of the question—how much will it reduce it?——

Sir JOHN COLOMB.—Against that would not there be, with enlarged powers, other estates which now, with the area of land available restricted, are not included, and which would cost you very much more than these estates to settle. I agree with Lord Dudley, that such estates as the Colles-Sandes Estate would materially reduce the percentage; but, suppose you have to deal with an estate like Lord Dillon's, under modern conditions, and with enlarged powers, where you would not leave the estate as it is, you would have that estate on the other side of the account, which would cause increased expense, and counterbalance the savings on such estates as the Colles-Sandes Estate. One would be a set-off against the other?—Yes, to some extent.

Jan 22, 1908.

Mr. Henry Doran.

59686. I am arguing against the reduction of the 17 per cent.?—What I am anxious to do is to show you clearly how the figures based on actual experience of 1903 Act cases work out in percentage of loss.

59687. CHAIRMAN.—What we want to arrive at is this: suppose we recommend that you should have a certain amount with which to buy land every year—for the sake of argument, suppose we say a million—what is the correct amount of money that should be given to you to lose on that million?—I think it would be well if you allowed me to read my memorandum, because I deal with those points.

59688. You must have some basis for your figures. 17 per cent. on a million a year would be £170,000?—You have not overlooked the fact that this 17 per cent. is not based on C estates alone, but also on A and B, that is, on two-thirds tenanted lands and one-third untenanted.

59689. It is only another way of saying you want an adequate amount of grass land to deal with the other land?—Yes; but it affects the price and the extent of the loss, the untenanted land being the most expensive to purchase and to treat in preparation for migrants.

59690. But taking your view, that one-third untenanted is the proper amount to have in hands, and if 17 per cent. is the amount of loss on the million, £170,000 a year would have to be given to the Board to treat a million?—Yes.

59691. We have got to show some reason for whatever figure we recommend. There is not the smallest use in saying that £170,000 is the amount, unless we can make it up in some way. We have got to give some reasons for that?—Yes. I am giving you the best proof in the results of actual transactions completed.

59692. Sir JOHN COLOMB.—You work out all these things later on?—Yes. The loss on the Board's dealing with this one-third of a million probably is only 12 per cent., but the Board's treatment of these estates is unsafe, because they had not sufficient untenanted land, and I suggest, therefore, that the untenanted land should be increased from 8 per cent., which it is actually in the group of estates submitted, to 33 per cent., which it ought to be if the tenanted holdings are made economic, and the loss by that change alone is raised from 12 to 17 per cent. I may observe that the tenants of these groups all paid at least two years' full rent, and that the untenanted land was sold at the average price which all the untenanted land purchased by the Board cost, namely, twenty-seven years' purchase of the estimated fair annual value, consequently, in making an estimate of the average loss in future transactions on the basis indicated by these figures—*i.e.*, 17·2 per cent., it is very important to bear in mind that if the untenanted lands are not purchased at the prices at which they can be sold at, on an average, a further loss will be entailed in excess of the 17·2 per cent. The bulk of the holdings on the estates in Class A have not been enlarged to any appreciable extent, and on sale were largely composed of uneconomic holdings. The chief improvements effected through the loss of 9·4 per cent. being the re-arrangement of scattered or rundale holdings, improvement of dwellings, construction of drains, fences, and roads. Although these estates have been appreciably benefited by the Board's treatment, the results cannot be considered altogether satisfactory. While a large proportion of the holdings disposed of cannot be classed as economic.

59693. Mr. BRYCE.—In what class do you class the Dillon Estate?—In Class A. Class B comprised poorer estates than those in Class A. A larger number of the holdings needed re-arrangement, and where, as a rule, owing to the poor character of the land, the works carried out in connection with re-arrangement, drainage, and road-making were not considered to be sufficiently directly reproductive to charge any appreciable portion of the outlay to the sale prices of the holdings, a large percentage of loss has consequently occurred, with results that are even less satisfactory than in the case of holdings comprised in Class A.

59694. Mr. KAVANAGH.—Could you give me the names of any estates in Class B?—The Carna Estate would be included in Class B, and the estates about Mallaranny, the Connemara and Erris Estates. I have here a list of the estates and the expenditure. They include the Bandon Estate, in the County Cork; the Gethings Estate, near Lissadell; Hazell Estate, near Carna; the Foley Estate, and other estates. The estates included in Classes A and B may be taken as fair types of poor estates in congested districts, but it will be observed that the proportion of Class B, which comprises very poor estates, is small compared with Class A. That is 15 per cent. against 75. The estates in Class C are wholly or mainly untenanted estates used for migration and form only 8·3 per cent. of the gross. In considering the suggestion to fix a percentage of loss which the Board may incur in dealing with the year's output of estates, it is of importance to study the proportions which the values of Classes A, B, and C respectively bear to the gross value of the three classes grouped together, for it is manifest that if the Board are limited to an average percentage of loss in the year's output, they must arrange to group for treatment the Classes A, B, and C in such proportions as will bring out the average percentage of loss allowed. To illustrate this, if they confined themselves during the year in dealing with estates in Class A, these would involve an average loss of 9·4 per cent.

59695. Mr. BRYCE.—You say that the Dillon Estate was in Class A?—Yes, but these lists only include estates purchased under Act of 1903.

59696. You say that in dealing with the Dillon Estate now there would be a loss of 20 per cent.?—Yes, if we were to put it into a satisfactory condition by extensive migration. The Dillon Estate, treated as it has been, would not cost more, but providing land elsewhere to remove a sufficient number of tenants to make the holdings of those who remain economic would involve a loss of 20 per cent.

59697. CHAIRMAN.—The Dillon Estate itself might cost more?—What I mean is apart from the probable difference in the price of it owing to altered conditions.

59698. You might not be able to hold it as you did; you might not be able to get the same revenue out of it as you did then?—I meant in the cost of works and anything that we have done on the Dillon Estate.

59699. But then you were helped by a number of favourable circumstances?—Yes.

CHAIRMAN.—If those favourable circumstances did not exist then as they might not exist now you would not have been able to deal with the Dillon Estate without migration for a loss of 9·4 per cent.

59700. Mr. BRYCE.—On the Dillon Estate actually you lost nothing. I don't think Mr. Doran made it quite clear whether he was dealing with future conditions in that 9 per cent. and whether he included the loss that is going to be caused by a complete system of migration?—No; I am merely giving you what actually happened on the estates named in the lists submitted, but I tell you that these are, as they are grouped, fair types of estates that will be purchased by Board in future operations.

Most Rev. Dr. O'DONNELL.—It would be very difficult to say what loss would be incurred on such properties, enormous properties, as the Dillon Estate, in two or three different contingencies: first, the migration of all the people you desire to migrate, and in the next place in the conditions of sale being altogether changed. I don't think Mr. Doran could do that without great consideration.

Mr. BRYCE.—Is it not essential that we should know that? How can we ask for a definite sum unless we know what it is going to cost to migrate the people?

Most Rev. Dr. O'DONNELL.—The Dillon Estate was bought cheap and before the Act of 1903. He has given us examples of purchase under the Act of 1903 which therefore are a much better guide to us with reference to future purchases.

59704. Mr. BRYCE.—Have you given us any complete case of an estate, in any one or other of these classes, in which you migrated on a sufficiently large scale all the people you wanted to migrate so that you will know what with increased powers it will cost you when you are going to migrate all the people whom you require to migrate?—No, but I can give an estate where there was migration alone carried out, and I will tell you what it cost—untenanted land alone to which a certain number of persons were migrated. The case you ask for is an ideal one, where you provide all the tenants on the estate with economic holdings. I don't believe we will be able to approach that perfect ideal in practice.

59705. That is Utopia: it would not be possible to provide for it, but you must have in your mind for our purpose some kind of an estate, what you are likely to be able to do, and what it is likely to cost. I think this memorandum gives you that, if I may read it. It gives the proportion of tenant land,

A and B in this list. Then I state what it actually cost to treat these estates. At the same time I tell you that we had not enough of untenanted land, and that instead of having only 8·3 per cent we should have 33 per cent., and if we had 33 per cent. we should be able to have more migrants, and enlarge more uneconomic holdings, and then the estimated loss of 14 per cent. is based on the assumption that we would be able to get the 33 per cent. of untenanted land under the new conditions, and if so we could bring these classes, A and B, as near the ideal suggested of an average £10 rateable value the loss would be about 18 per cent. The percentages of loss on individual estates in Class A, 7·7, 25·4, 15, 24, 11·9, 6·3, 12·9, 20·3, 10·6, 3·6, 8, 18·7 2·8. These are the varying rates of which the average comes out at 9·4 per cent. I have pointed out that if the Board confined themselves during the year to dealing with estates in Class A these would involve an average loss of 9·4 per cent. If, on the other hand, they deal only with the poorest estates, Class B, the loss will be 21·6 per cent., and if they confine themselves solely to migration, the loss would be at least 30 per cent.; so that in fixing the average net loss to be incurred on estates dealt with in the year, it would always be necessary to so arrange the proportions of the different classes sold each year as would bring out the average loss at the percentage allowed. I have endeavoured to do this as far as possible with the limited opportunities for grouping the estates that the small extent of purchases by the Board have hitherto afforded. An examination of the past records of the Board's work, as well as a reference to the estates now classed under B, make it clear that the poor and less resourceful estates cannot be dealt with, with a less loss than 20 per cent. of the cost price. On a few of these estates the loss even exceeded 100 per cent. of the cost price. It may be taken for certain that extensive migration of small landholders cannot be safely carried out at a less loss than 30 per cent. of the cost price of the land, and this on the assumption that the land can be sold to the migrants at the price paid for it.

59709. That is of the untenanted land. You buy an estate to migrate these people from, and you buy an untenanted estate to migrate them to?—That is Class C.

59710. You are looking at that quite independently?—For this purpose I have taken it that every holding you carve out involves a certain loss. I afterwards merge that into the general group. The average price paid by the Board for all untenanted land acquired was, as given in my evidence, 27 years' purchase of an estimated fair rent, the annuity on which would be equivalent to 12½ per cent. reduction in the rent. In my opinion the annuity of a migrant's holding ought not at the outside exceed 85 per cent. of the estimated fair letting value of the holding including buildings, and even this rate seems to leave rather too small a margin of security for the payment of the annuity for such a long period as 68½ years, and I would much prefer, if it was possible to finance it, that the annuity on the holding should not exceed 85 per cent. of the fair rent of the land excluding the buildings. It would be quite possible to do this if migrants could be found who would surrender fairly substantial holdings, for the occupation interest in the holdings they surrender would in all cases be deducted from the cost price of the land in the new holding, but in the case of small holdings this occupation interest is not sufficient to cover the sum added to the value of the land in respect of the necessary buildings erected upon it. So that if the Board continue to acquire untenanted land at 27 years' purchase of an estimated fair rent, and that the migrants to these lands are persons who surrender very small holdings, it will not be possible to let them have the new holdings at an annuity representing 85 per cent. of the fair rent of the land alone without incurring a larger loss than 30 per cent. I should also point out that it appears probable that the Board will seek to acquire a much larger proportion of non-residential tenanted holdings than they have hitherto acquired, and if they are obliged to pay more for such holdings than for land in the owner's possession they will be unable to sell the new holdings created out of such land at annuities which do not exceed 85 per cent. of the fair rent, without incurring a much larger loss than 30 per cent. on the cost price of the land alone of the migrant's holdings. Personally I see no reason why a larger price should be paid for land jointly owned by two persons (tenant and landlord) than if it were occupied by only one of these persons. The price charged the migrant should not be affected by the number of persons who previously had ownership or claims on the land he gets.

59711. CHAIRMAN.—Would you reverse that. Do you see any reason why a larger price should be paid for land held or owned by one person than for land held or owned by two?—No. I think the same price should be paid in both cases.

59712. Most Rev. Dr. O'DONNELL.—You are speaking irrespective of buildings and equipments?—The land includes those. They should be taken into account in valuing it, a separate valuation being placed upon the buildings.

59713. Mr. KAVANAGH.—The occupation interest?—It is there in both cases.

59714. It might be divided among two persons or it might be altogether in one?—Yes, and if a man is owner in fee-simple and also the occupier that is no reason why he should not get the value of his occupation interest.

59715. Most Rev. Dr. O'DONNELL.—Would you say you would pay the same if the land is occupied by the owner? You would suppose in that case that the holdings would have the buildings and equipments which it would have in case it were in the possession of a different occupier?—It does not affect it. I propose to buy a tract of land, and if I buy I get everything that is on it, buildings and all. Before I arrive at a decision as to what it is worth I must value it. I value the land as I see it on an estimate of the revenue the land is capable of yielding when managed in a husbandlike manner, and I also value the buildings. It does not matter who the owners are, or how many there are, the productiveness of the land and its value, including building and other improvements, remain the same.

59716. Mr. SUTHERLAND.—Or how many there are?—Or how many there are. You have put a full value on what you are going to buy irrespective of how many owners, and the price which you are putting upon it of course will have to be fixed, having regard to what you can sell it at, and what it is really worth. Then it is a question when you come to apportion the price afterwards. You give to the landlord his share, whatever it is, and to the occupier the other share. If the landlord is the occupier you give him both shares.

59717. CHAIRMAN.—But there is a difference in the case in which the land is in the hands of the two people, landlord and tenant. The price which the land represents to the landlord is so many years' purchase of the rent. That is what it is worth to him?—Yes; that is what it is worth to him where there is a permanent tenant on it. He has only the revenue to sell. He cannot give possession of the land.

59718. He has got so many years' purchase of the revenue? The revenue has been fixed by the State and what he has got to sell is that revenue so fixed?—Yes.

59719. In the case of untenanted land he has got to sell so many years' purchase of rent not fixed by the State, but which he could obtain for himself by open competition?—He has the land to sell, and can give possession of it, and the value of it is to be measured by its productiveness, its gross yield, when managed in a husbandlike manner, after deducting all necessary outgoings incidental to its management.

59720. Its gross yield can only be measured either by what he makes out of it by farming it himself or what somebody will give him for it?—Yes.

59721. If it is measured by what somebody will give him for it in the open market, unfettered by any action of the State it is measured by what you can get for it?—If land were bought in the open market, without any financial aid from the State to purchase the fee-simple of it, it would not bring an excessive price.

59722. There is not State interference with the owner of untenanted land. He can put it up in the market for open competition, which will bid up the price of the land to a certain figure, and then he can sell that for so many years' purchase—is not that so?—In that case the price the owner gets is enhanced, and usually excessive, by reason of the State financing the buyer to purchase the fee-simple.

59724. In one case the market is open and free; in the other case it is limited by the action of the State

Jan. 22, 1908.

Mr. Henry Doran.

—I am not arguing whether action is right or wrong. Therefore there is a difference where the land is in the hands of one man—the landlord?—The intrinsic value of the land is not affected by the number of the owners.

Sir FRANCIS MOWATT.—It appears to me in two ways. In one case it is income from the land guaranteed him by the State.

CHAIRMAN.—It is fixed, but not guaranteed.

59726. Mr. SUTHERLAND.—Is the competition for untenanted land open and free?—Yes; it is quite free, except within the small area of disturbed districts.

Mr. SUTHERLAND.—Can you make land?

Most Rev. Dr. O'DONNELL.—Is the income on a permanent basis?

59727. Mr. SUTHERLAND.—Is not it the price of a monopoly he gets?—I don't know that you can put it in that way unless you assume land should be the property of the nation.

59728. CHAIRMAN.—Land is limited and is required, and to that extent, of course, is affected by what you may call a monopoly, but that must apply to land everywhere. But putting aside that and putting aside any question of agitation, cattle driving and anything of that sort, is it not true that land in the hands of a landlord in Ireland, untenanted land, is subject to a perfectly free and competitive rent?—Yes.

59729. You can put that land up in the open market. There is nothing to prevent a man from Scotland coming and taking it?—No.

59730. And the man from Scotland may bid against a man from the locality, and force the price up until one considers that it is not worth it, and drops out?—Yes.

59731. That right and the income thus received is what the landlord has to sell when he is selling his land?—Yes, but a prudent purchaser will have regard to the instability of a competitive rental.

59732. In the other case, where there are two partners in the land, the State has, by Parliamentary action, limited the extent to which the rent can be bid up?—Yes.

59733. Therefore the landlord in that case is selling a property which is subject to that State limit?—Yes.

59734. Therefore he is not in the same position as the man who has got no tenant?—He has not the same ownership in the land.

59735. Therefore there is a difference in the price to be paid to a landlord when the land is in the sole possession of the landlord, another man, the tenant, has an interest in it?—I can see no difference in value, but in one case the value is owned by one person. In the other case the same value is owned by two persons.

59736. Most Rev. Dr. O'DONNELL.—Would you consider that the competitive income from grass land is so secure as the State fixed income from judicial rents?—No. I was going to explain that you cannot put the capitalising of the two incomes on the same basis. One is not so secure as the other.

59737. There is no margin of security in the one case?—Not for the same price.

59738. Sir JOHN COLOMB.—Why not?—One is up to its competition value. The revenue varies according to competition from year to year. The other revenue is what a Land Commissioner, Mr. Justice O'Hagan, defined as a live and thrive rent, an easy annual assessment made on the products of the land which the tenant is supposed to pay year in and year out easily and to live and thrive. A man getting possession of a tract of land subject to the payment of that easy rent every year has a saleable interest in the land subject to that rent, because it affords him or persons equally desirous of pursuing farming as an industry the opportunity of making a living out of it. Such persons could not make their living from the profits of the land after paying a competitive or accommodation rent.

59739. Mr. BRYCE.—You are now talking of the tenant's interest?—Yes, incidentally.

59740. We are talking of it from the point of view of the landlord?—The Board want to get a tract of land which is very necessary for the poor tenants adjoining. The value of that land is not regulated or should not be affected by the number of persons who claim ownership in it.

59741. Look at it from the landlord's point of view. We have evidence that the letting value of the untenanted lands has practically not changed for fifteen years. On the other hand, the experience has been that every fifteen years the other rent does go down. Therefore, looking at it from the point of view of history, the undivided interest in the untenanted land is of more value and of more stable value than the other is?—I can give you figures to show that grazing rents in Roscommon and Mayo have fallen considerably during the past twenty years.

59742. CHAIRMAN.—We need not go into that at present?—I submit a list showing the prices paid by the Board for a number of tenanted holdings which they acquired,* classified as follows:—First Term Tenants—Acquired by voluntary agreement without initiation of any legal proceedings. First Term Tenants—Acquired by pre-emption proceedings. First Term Tenants—Acquired by resumption proceedings. Second Term Tenants—Acquired by voluntary agreement without initiation of any legal proceedings. Second Term Tenants—Acquired by pre-emption proceedings. Second Term Tenants—Acquired by resumption proceedings. Future Tenancies—Acquired by Notices to Quit. In some of these cases the Board acquired the land by voluntary agreement without initiating any legal proceedings. In other cases on receipt of notice from tenants of their intention to sell at a price named, the Board serve notice to pre-empt, and in several cases were advised to pay the excessive prices offered, when after making inquiries they were satisfied that the intending purchaser was a *bona fide* one and desired to carry out the bargain. The Board served notices to resume possession of several holdings, and the prices paid were, in most cases, settled by agreement before the hearing of the case by the Land Commission. In a few cases the prices were fixed by the Land Commission after hearing all parties. In many cases notices to quit were served to determine future tenancies and the prices paid were in accordance with the scale laid down by the Act.

59743. I don't know whether you could very shortly run over the different procedure. If the Board has acquired an estate and hears that a tenant wishes to sell, and serves a notice of pre-emption, how is the price fixed then?—A tenant holding under a judicial tenancy cannot complete the sale of his tenant-right in his holding without first serving the landlord with notice of his intention to sell, setting out in his notice the terms on which he has arranged to sell his holding.

59744. Is not it sold by auction?—Sometimes, but not often. Sometimes he serves notice of his intention to sell by auction, or sometimes he serves notice that he intends to sell to, say, John Jones for £150.

59745. Where he says he is going to sell by auction?—First of all the landlord comes into communication with him, and makes an offer, and if they cannot agree the landlord serves him with a cross-notice that—"Having failed to come to terms with you for the purchase of your holding, I give you notice that I will apply to the Land Commission to fix the true value." The Land Commission hear both parties, and fix the price at which the landlord pre-empts.

59746. Sir JOHN COLOMB.—The landlord is obliged to accept that price no matter whether he considers it fair or not?—Yes.

59747. CHAIRMAN.—You say that in several cases where the man served notice that he was going to sell the Board served notice to pre-empt, and were advised to pay the excessive prices offered when after inquiry they were satisfied that the intending purchaser was a *bona fide* one, and intended to carry out the bargain?—Yes. In one case we had to pay up to forty-seven years, which included buildings and improvements not included in the rent. As regards resumption proceedings, under Section 83 of the Act of 1903 the Board have power to resume possession of a holding held under a judicial tenancy for the purpose of striping or migration, or the enlargement of holdings. They did not have that power before the Act of 1903, and the Board have in a great many cases exercised that power within the last fifteen months. In the case of all such holdings in which they have done so they have served the occupier with notice to resume possession; and the occupier then having consulted his lawyer, and finding the Board were empowered to resume, would negotiate with them. We have agreed in all cases, except a few, where we had to go to court, and got the Land Commission to fix the price.

59748. The hearing is carried on in the same way as under pre-emption?—Yes.

59749. Most Rev. Dr. O'DONNELL.—Is it the Land Commission in that case?—In both cases.

* See p. 47.

59750. CHAIRMAN.—An ordinary landlord has the same power of pre-emption as you have?—Yes.

59751. He has no power of resumption?—He has, but only for purposes specified, for the enlargement of his demesne or taking sites for the extension of a town, as specified in Section 5 of the Act of 1881. Section 83 of the Act of 1903 says that the Congested Districts Board is empowered to resume possession of a holding, during the continuance of a statutory term, for the purpose of migration and the enlargement of holdings, and also for all the purposes named in Section 5 of the Act of 1881.

59752. As regards future tenants there is a notice to quit?—Any landlord may determine a future tenancy by serving notice to quit.

59753. Mr. SUTHERLAND.—Not unless there are arrears?—Yes; whether there are arrears or not, and the Board have precisely the same powers as any landlord, namely, to determine future tenancies by notice to quit; but they are obliged to pay compensation in accordance with the scale laid down in the Act of 1881, which is fixed according to the rent payable and the number of years' purchase he is to get for disturbance, and in addition to that number of years' purchase, he has to be also paid for the unexhausted value of his improvements.

59754. Does that go before the County Court Judge?—Yes. It is settled by him.

59755. With regard to resumption, have the Estates Commissioners the same power of resumption as you have?—I don't think they have.

59756. Sir JOHN COLOMB.—It requires a year's notice for resumption?—No; they may serve notice for resumption any time.

59757. It cannot be operative for a year?—It may take less than a year.

59758. If the Congested Districts Board wish to obtain possession of a future tenancy is it not bound by a year's notice?—Yes. That is done by notice to quit under which they must usually give a year's notice. Although the Board have that power of resuming possession of a judicial holding, there was evidently some mistake in the drafting of the Act, for they have no power to resume possession of a present yearly tenancy, and when we desire to obtain possession of a holding held under a yearly tenancy we must first serve notice on the tenant to have a fair rent fixed, and then, having done that, we have to serve the resumption notice. We have had several cases of that lately.

59759. Mr. SUTHERLAND.—How does that arise? Do they not come under the Act of 1881?—They did not have a fair rent fixed. The Board have power to resume possession of a holding held under a judicial tenancy, while they have no power to resume possession of a holding held under a yearly present tenancy.

59760. How did that yearly present tenancy arise?—The yearly present tenancy is one subsisting at the passing of the Act of 1881, but the occupier has not since then had a rent judicially fixed. He might have had his rent reduced by agreement, not filed, or he might have considered that if he went into court he would not get any reduction, or he might have held as yearly tenant a large grass farm, and was afraid to try to have a judicial rent fixed, lest it might be declared to be a non-agricultural holding. At any rate, we now find him as a yearly tenant, and cannot put him out before we have a fair rent fixed.

59761. He never took advantage of the Act of 1881: that is what it means?—Yes. In a few cases the price was fixed by the Land Commission—that is, in resumption cases—but in cases in which notice to quit was served to determine future tenancies, the prices paid were in accordance with the scale laid down. In proof that migration cannot be safely carried out at a less loss than thirty per cent., I submit the following particulars:—Take a £15 holding. The cost price at twenty-seven years is £405.

59762. Sir JOHN COLOMB.—You mean of the estimated fair rent or the actual fair rent?—£15—the estimated fair rent. At 27 years' purchase the price of the holding at that rent is £405. The cost of building is increasing, and I put down the cost at £130. Roads cost £20 and fences £20.

59763. Sir FRANCIS MOWATT.—Have not you spoken of that £130 as £120 during the day?—I did in the last case; and I gave you particulars of holdings where the cost was £108. But they are costing more where we are getting into the open areas, and where there are few labourers to be got. For instance, at present we have fifty men housed in temporary houses. We had to import them from the congested districts to put up houses on holdings formed on the grass ranches of Roscommon. We had to import those workers, as there were so few labourers living in the neighbourhood of those grass areas. They had to be paid more wages, and the operations are more expensive. The cost of buildings has risen to £130, the cost of roads £20, and of fences £20. The total cost of a £15 holding is thus £575. If the sale price be calculated on an annuity of 85 per cent. of the £15, annual value, that is £12 16s., the total is £394, and there is thus a loss of £181. From this loss of £181 you have to deduct the occupation interest in the holding vacated by the migrant who will come to it.

59764. And the worse off the migrant and the smaller his holding the larger the loss?—Yes. From this I submit the following deductions:—1. If the occupation interest of the surrendered holding were only £35 (which was the average value of the occupation interest of the first 207 migrants dealt with), the loss would be £181 *less* £35, *i.e.*, £146 per holding, equal to 36 per cent. of the cost price of the land alone. This loss, in the case of the 207 migrants referred to, would have been 37·3 per cent. if the buildings had cost £130, and the roads and fences £40, but in these cases the average expenditure per holding on the buildings was £108, fences £20, and the roads and other improvements £16—that is an expenditure per holding of £26 less than the amount given above. The fee-simple of the land in the 207 migrants' holdings, referred to in the Fourteenth Annual Report (page 121), cost £66,452, which would be an average cost of £321 for the land. The migrants dealt with in the succeeding year, as given in the Fifteenth Report (page 132), involved a loss of £87 per holding (page 13). I am comparing the actual cases. The average loss was only about 26 per cent., but I believe they will cost more in future, and that the average loss will not be less than 30 per cent.

59765. That loss will fall not upon the Irish Land Stock, but upon the State?—That is what we want, but up to the present the only portion of the Board's funds which are not derived from Irish sources is the Parliamentary grant of £20,000 a year.

59766. Sir FRANCIS MOWATT.—So it will not be a loss against the Irish ratepayers?—It will fall on the Exchequer if given as a special grant to meet these losses.

59767. CHAIRMAN.—On the income of the Board?—What I would like to emphasise is that the more migration work the Board do the more radical and effective their treatment is. The country is really getting good value for it, as compared with one-fourth of the loss in dealing with estates, which are not substantially improved.

59768. That is to say, in your opinion, it is better to incur even 30 per cent. loss and do the thing thoroughly than to have a loss of, say, 15 per cent. on an estate like the Dillon Estate, and leave the thing in a half-completed condition?—Yes. You leave the estate improved, but with a large number of the holdings uneconomic. A very large number of the holdings there are uneconomic. Then I go on to my second example. 2. If the occupation interest of the surrendered holding were £50, the loss would be £181, less £50, equal to £131, or 32·3 per cent. loss on the cost price of the land (£405.) 3. If the occupation interest of the surrendered holding were £85, the loss would be £181, less £85, equal to £96, or 23·7 per cent. loss on the cost price of the land alone (£405). That shows that if you could get a substantial class of migrants you would be able to carry out the migration schemes with very much less loss. Moreover, the more the loss you incur by reason of having to deal with small landholders as migrants the less satisfactory is the work you are doing, because you are getting the least suitable class of migrants, and each small holding vacated permits but a small enlargement of adjacent small holdings.

59769. Mr. BRYCE.—What do you do with the occupation interest on passing the vacated land to the man whose holding you enlarge?—We charge him the fee-simple value as well as the occupation interest allowed to the migrant.

59770. You charge it to the annuity?—Yes. Suppose there is a man with a £4 holding adjacent, and the price paid for this class of holding on the estate is twenty years' purchase, we charge him that rate for his own holding. We give him £2 worth

Jan. 22, 1908.

Mr Henry Doran.

of the vacated land, and we charge him twenty-seven years' purchase of the £2 worth.

59771. You recover from the enlarged man the whole of the surrender value of the piece in occupation of the man who goes out?—Yes, usually.

59772. You make no loss under that heading at all?—No. Our estimate of occupation interest is such a sum as can be recovered from the persons who get the vacated land and no more. If we are apparently not allowing the man enough for the holding he surrenders it must be borne in mind that he gets an equivalent value of land in the new holding in exchange for his old holding.

59773. The man who is put into the new holding takes not the £5 but the £7?—Yes. We charge the enlarged man at the same rate as we charge the migrant on the value of the additional land he gets, and in that way we make one balance the other, and give each equal value. We lose when the price paid exceeds twenty-seven years' purchase of an estimated fair rent.

59774. Sir JOHN COLOMB.—In this case, Number 3, you lose 23·7 per cent., and the man can then sell the interest in his new holding, and you cannot prevent him?—No; but he is probably replaced by a better man.

59775. But he gets the benefit?—Yes; but the State has no concern with the individuals. Its main concern is in having the new holding occupied by an industrious member of the community, and to have it of sufficient size to maintain such a man and his family according to a fair standard of comfort. If the man the Board placed on the holding fails from any cause, he has to sell his interest, and he is replaced by another man, who puts solid cash into it, and thus increases the security.

59776. The tenant you migrate is in possession of a holding which represents less than the value of the holding?—Yes.

59777. Less by so much, by £181 in this case, and if he sells when he comes in he walks off with the money, because you buy the thing as it stands?—You did not arrange to lose that £181 in order to help the individual you put into the place first. You were justified in losing that £181 in order to have a holding formed which was to be occupied by an industrious family for the benefit of the country, and to relieve congestion by the addition of the migrants' vacated land to adjacent holdings.

Sir FRANCIS MOWATT.—The man Number 1 has done the man Number 2 out of something; but you are not concerned with that.

59778. Sir JOHN COLOMB.—The man can sell the holding, but the State loses?—The State never get the money back. If they did all that for farmers, and did not put migrants into them, but put these places and buildings up for auction, they would get wholly different men, men with capital; but the object was to relieve the poor and destitute; but if the object was merely to get industrious tenants on the land, I think the State could very well split up these lands and sell them.

59779. Sir FRANCIS MOWATT.—Surely the man who sells out—the poor tenant to whom you allude, is covered pretty well, because he has got the value of his holding, the money paid for it by the other man. The latter may have bought it for too much, if you like, but at the same time that does not affect the State?—The man to whom you give it is removed from the congested area, and it is nothing to the State, from my point of view, if he sells it in a month.

Sir FRANCIS MOWATT.—You get the same annuity from the second man as the first.

59781. Sir JOHN COLOMB.—You would lose £181. If you went into a congested area and said, "I will give you so much to clear out and go where you like," they would do it probably for £50?—A great many of them would emigrate on these terms, but nobody advocates wholesale emigration as a desirable remedy for relief of congestion. What I propose is to transfer the best men you can get into the open areas, losing a certain amount of money, in order to provide economic holdings for them and their successors. I don't believe the migrants will sell unless they fail from ill-health or other cause. None of our migrants have sold. If the migrant's annuity was to be kept at 85 per cent. of the fair rent of the new holding, including buildings, I would say a fair rent for such buildings as we erect on a £15 holding would be £2, making the gross fair rent £17, which, multiplied by 26½, would leave the gross price of the holding £446, and the annuity on this would be £14 10*s*. Fifteen per cent. off the gross rent of £17 would be £14 9*s*., and the loss in the cases cited would be reduced to the following:—For case I. the loss would be £94, equal to 23·2 per cent. on the cost price of the land alone (£405); for case II. the loss would be £79, equal to 19·5 per cent. on the cost price of the land alone; for case III. the loss would be £44, equal to 10·9 per cent. on the cost price of the land alone. These figures are very important in connection with the lists of A, B, C estates, which I have submitted to you with the intention of showing that unless the Board go in for acquiring untenanted land, which is the most costly operation in connection with the settlement of estates, to the extent of one-third, they will not be able to alter materially the conditions of any large proportion of the congested districts by the enlargement of holdings, and that if they do incur a very large loss on one-third of the estates dealt with they should be placed in a position to lose about 17 per cent. on the year's output; but, as I have explained, if they buy a larger proportion of property on which they will have a small loss, the percentage of loss can be kept lower, but the estates most in need of improvement must be taken in hand slowly.

59782. Mr. BRYCE.—In that table* you give a case where it would have cost 37·3 per cent. Don't you think, bearing in mind that that might occur in a great many cases, and also that you might not be able to get this untenanted land at 27 years' purchase, that the average of 30 per cent. loss on cases in Class C is insufficient?—I have repeated more than once that my percentage of loss throughout is based on the assumption that the Board won't pay for the land more than they can re-sell it at, and you cannot safely sell to migrants at an annuity that would be higher than 85 per cent. of a fair rent after allowing for occupation interest.

59783. CHAIRMAN.—Up to the present you have an average of twenty-seven years for untenanted land? For all the untenanted land that was bought.

59784. Speaking roughly, suppose you proceed to purchase that land on a basis of net income, do you think the basis of twenty-seven years would provide the net income from that land?—It would depend on the rate of interest.

59785. Say 3½?—It would come to more than twenty-seven years' purchase on 3½ per cent.

59786. Twenty-seven and a-half years' purchase would not give him his net income?—No. In addition to the 27½ years' purchase, he has got the bonus, so that, roughly, would be thirty years' purchase.

59787. Don't you think that thirty years' purchase invested at 3½ per cent. would provide him with his net income?—In many cases it would not.

59788. What would?—In the case of very good grazing lands it would not, because there is such a high rent obtainable for them for accommodation purposes, which is far above their value, taken by themselves, or for permanent agricultural lettings

59789. What do you think would?—It varies greatly.

59790. Would it go as high as thirty-five years' purchase?—I believe in some cases it would, that is, 35 years' purchase of the agricultural rent. Very good grass land sometimes, especially when there is a small proportion of it in a district, brings, for accommodation purposes, a rent much in excess of its agricultural value. A man has, say, a rough farm of 150 to 200 acres—a well-sheltered farm that he can keep cattle on in the winter very cheaply; then, if he can get a good grass farm to turn them on to for the summer to fatten, he will probably be able to pay from thirty to fifty per cent. more than the agricultural value of the good grazing farm if it were taken by itself.

59791. That is the sort of land you would not acquire?—That sort of land is the last we would seek to acquire, or if we did acquire it we would keep it for grazing purposes, which is much needed for poor districts.

59792. Then it would return you what you gave for it?—It probabaly would in grass.

59793. Sir JOHN COLOMB.—Take Connaught as the area of the Board, the more you take away that land and sub-divide it the higher must be the price of the remainder, because you reduce the supply and do not diminish the demand.

Sir FRANCIS MOWATT.—I thought it was part of our case that you were diminishing the demand.

* See p. 46

Sir JOHN COLOMB.—That is a very important point. As conditions now exist there is this value for accommodation land?—To a limited extent, and merely in respect of the best class of land.

59794. You diminish that land by the operations of the Board?—Yes.

59795. Do you diminish the demand in a corresponding degree?—You do, to some extent; because the people who now pay these high prices for these good grass farms are graziers who have tracts of poor land, and if you take away the poorer land from them they will no longer be seeking to obtain the richer land for their accommodation purposes. If I have a rough farm that can feed stock cheaply in the winter I can pay more for a good grass farm to fatten these stock in summer than an agricultural tenant could pay, and more than I could pay if I did not require it as a supplemental farm to my rough farm on which I feed the cattle and sheep during the winter.

59796. CHAIRMAN.—You have said that the Board have given an average of 27 years' purchase?—For all the land that they have bought.

59797. Twenty-seven years' purchase of what?—Of the estimated fair rent.

59798. Taking the poor law valuation, what was it?—It was, I believe 29·5.

59799. CHAIRMAN.—Is not the proper way to put it to say that the average price paid for grass land was 29·5 years' purchase of the poor law valuation?—That has been argued ever since I gave my evidence. That is not a standard of value I would adopt.

59800. The landlord knows nothing about your estimated fair rent?—No, but the land comprises arable land, plantations, and bogs. The average price paid for all our untenanted land was 29·5 years' purchase of the poor law valuation. When I was giving my evidence we were not able to give you the valuation of the untenanted land which we had bought, because we attached no importance to the poor law valuation. The Estates Commissioners, however, kept the poor law valuation record. You required us to supply our figures on the same basis for the purposes of comparison, showing what the poor law valuation of the land we bought was. We got the information at considerable expense, but when you have it now it is very misleading, because I could show you several cases there where there was a valuable tract of bog for which we paid about 300 years' purchase of the poor law valuation, and got it cheap. That is to say if a bog has a poor law valuation of threepence an acre, and is near a densely populated area where bog is scarce, it would be cheap at £4 an acre, although its poor law valuation is only threepence. If we paid £3 15*s.* an acre for it, that would be 300 years' purchase of the poor law valuation. At £5 an acre it would be 400 years' purchase. When you introduce price of turbary, plantations, and buildings into our figures and bring out an average, it is quite misleading as to the price paid for the agricultural land. In the same way with a plantation for which we may pay £20 an acre for the timber on land with a poor law valuation of four or five shillings.

59801. You say the 29 years' purchase includes bogs, plantations, and everything else?—Yes, and my way of putting it is to say 27 years' purchase of an estimated fair rent is the price paid for the agricultural land in our purchases.

59802. Sir JOHN COLOMB.—Yes, but take since the Land Act of 1903, you know the land you bought, the arable land you bought, you can describe it?—Yes.

59803. Can you give us the poor law valuation for that?—I do not know if that has been ascertained for you.

Mr. Callan.—There is no distinction made in the statistics submitted by the Board between the different classes of land, and it has not been found possible to get further information.

Witness.—If the tenement valuation is not assessed upon it you cannot get it. You can only get it in the gross.

59804. CHAIRMAN.—Taking the grass land you have bought since 1903?—We paid 27 2/3rds years' purchase since 1903.

59805. Take that grass land which you have bought. Do you think that at 27 years' purchase, plus the bonus, it would not give a man his net income?—Not on the 3½ per cent. basis—his past net income.

59806. Not on the actual class of land you have bought?—No.

59807. Sir JOHN COLOMB.—But that is by voluntary agreement?—Yes.

59808. The landlords sold at a loss on their net income?—There is no landlord I know who would not be prepared to exchange his income from untenanted land to an investment at 4 per cent. If you were given an opportunity of inspecting the rentals you would find that the income from grazing rents in most instances within the last twenty years is considerably reduced.

59809. Mr. BRYCE.—Our evidence is to the contrary?—I am afraid that that is not so, except in a very few places, and that you did not get reliable evidence or proofs. I am speaking of what I know from my investigation of rentals. We bought an estate near Tulsk the other day, and the figures given for the past twenty years as to the rental of the grass farms were entirely reliable, and the rental showed a considerable shrinkage. This is the case in the great majority of rentals of grazing farms submitted to me.

59810. Sir FRANCIS MOWATT.—That is so extremely important that I should be glad if you could suggest any way in which we could arrive at the exact facts of the case, and the extent of the fall in the rents from grass lands in Connaught?—I think that landlords are quite conscious that evidence of the kind would be against their interests, and if the facts were not as I state they would have come forward with their rentals to prove that those rents had not fallen.

Sir JOHN COLOMB.—The present feeling about grass lands is that a landlord would not come forward and say anything about them one way or another.

59811. Sir FRANCIS MOWATT.—Have you any means you can suggest to us of ascertaining whether the rents of grazing lands in Ireland have been practically maintained during the last twenty years; you say not as far as your experience goes?—Not in the West of Ireland; but I say that the very best land has suffered least, but that all kinds of grass lands have depreciated for the last twenty years very much, for the last ten years not so much, and for the last five years still less.

59812. Mr. BRYCE.—You think it has nothing to do with the land falling off owing to not having been tilled and owing to nothing having been put into it?—I think that has a great deal to do with the falling off in the productivity of inferior land. Store cattle have been continuously fed on it and no manure has been put into it, and I know men who would have to prove by their books that their rental from grass lands has fallen considerably in the last twenty years, and I do not believe that there is a single landlord in Connaught, except in the case of a few very good grass farms well situated, who is not getting a lower rental from his grass farms than he has received previous to fifteen years ago.

59813. Sir JOHN COLOMB.—As I understand, you compare the present day with twenty years ago and say that there has been a great fall?—Yes.

59814. But you say that in the first ten years of that period the fall was more considerable?—Yes.

59815. And since then it has been righting itself?—No; it has not gone up, but the fall has not been so great.

59816. The diminution in letting value has been inconsiderable; it has not yet recovered the standard of twenty years ago, but the tendency is to increase?—No. What I meant to say is there has been a substantial fall in the rental of the grass farms in the West of Ireland during the last twenty years, that the fall was greater up to ten years ago than it has been for the last ten years, but that it has been falling and not appreciating all the time. The fall has been less considerable for the last five years, and in several places I know the grazing rental has been stationary for a few years past.

59817. Mr. BRYCE.—In other words, I suppose you would put it in this way, that a rental of £100 came down to £80 in the first ten years, to £70 in the five years following the first ten years, and to £65 in the last five years?—Yes; to illustrate it——

59818. CHAIRMAN.—If, during the last five years, the rents have been stable, a retrospect of the income derived for the last five years ought to show you fairly what the letting value of these lands is?—The last five years would be a truer test than the last ten years.

The Commission adjourned.

ONE HUNDRED AND FIFTEENTH PUBLIC SITTING.

THURSDAY, JANUARY 23RD, 1908.

AT 11.0 O'CLOCK, A.M.

In Westminster Palace Hotel, London.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir ANTONY MACDONNELL, G.C.S.I.; The Right Hon. Sir JOHN COLOMB, K.C.M.G.; JOHN ANNAN BRYCE Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. HENRY DORAN further examined.

Jan. 23, 1908.

Mr. Henry Doran.

59819. CHAIRMAN.—Mr. Doran, will you continue your statement?—If the annual grant to be made to the Board for the improvement of estates is to be based on an average net loss, it will be necessary to leave the Board free to exercise reasonable discretion in the selection and grouping together for each year of estates that will involve a large loss, a small loss, and an intermediate loss, and it will rest with the Board to exclude from purchase estates or portions of estates which they consider may be sold without special treatment. The percentage of loss incurred in the treatment of the estates purchased and prepared for sale under the Act of 1903, may be stated in round figures as:—9 per cent. loss on Class A:—Tenanted estates, which comprised 76 per cent. of the cost price of all the estates dealt with. 20 per cent. on Class B:—Tenanted estates which comprised 15½ per cent. of cost price of all the estates dealt with. 30 per cent. on Class C:—Untenanted lands, which comprised 8½ per cent. of cost price of all the estates dealt with. If the Board dealt with one-third of a million worth of untenanted lands, the loss at 30 per cent. would be on £333,333, equal to £100,000. If 10 per cent. of the tenanted lands were of B class £20,000 would be necessary to cover the loss in dealing with them. These losses for Class C and Class B estates together, which only make up 43 per cent. of the million's worth of property, would amount to £120,000, or 12 per cent., on the £1,000,000; so that if the average loss permitted be 12 per cent. on one million's worth of property, 33 per cent. of C and 10 per cent. of B estates would involve a loss of £120,000, and 57 per cent. of the A, tenanted estates, should be dealt with without loss.

59820. You say that the loss on B and C would be £120,000 a year?—That is, if the proportion of these estates I have indicated be under treatment. Suppose the output is a million a year, and one-third of that is untenanted land, on which you must lose 30 per cent., that will cost you £100.000. If you also deal with 10 per cent. of the poorest class of estates you cannot deal with those at less than 20 per cent. of loss, and then 57 per cent. of the entire volume of estates should be dealt with without any loss if the loss per million be limited to £120,000.

59821. I don't understand how you are going to do that. You lost 9 per cent. on them in the past, how are you going to do what you propose in the future?—I was just going to explain if you only allow 12 per cent. on a million, that is £120,000, you would not be able to deal satisfactorily with a million's worth of property in a year, because you would have to pass more than half of it through without any loss. You cannot deal with migration on an enlarged scale at a less loss than 30 per cent. You cannot deal with the very poor estates with a less loss than 20 per cent. You may be able to deal with the better class of the A estates at, perhaps, 5 or 6 per cent. on the enlarged area. It will, I think, be admitted that the class of estates most in need of attention are the poorest tenanted estates and the untenanted land, and the loss on these would be at least 20 per cent. and 30 per cent. respectively, while it would not be possible for the Board to pass through their hands such a large proportion as 57 per cent. of the estates dealt with each year without incurring a loss. For these reasons, with others, I consider that at least 15 per cent. should be allowed on each million's worth of land dealt with, and *for the purposes of an estimate* it might be apportioned as follows:—33 per cent. of C equal to £333,333, at 30 per cent. loss, £100,000; 10 per cent. of B, equal to £100,000, at 20 per cent. loss, £20,000; 57 per cent. of A, equal to £566,667, at 5·3 per cent. loss, £30,000, so that on the £1,000,000 the loss would be £150.000.

59822. Sir ANTONY MACDONNELL.—The B estates are the poorest?—The estates that are in the worst condition, the least resourceful, and the most difficult to improve.

59823. Will there be only 10 per cent. of the total land bought?—I don't think you can deal with a larger proportion in a million's worth each year. The area of these estates is not indicated by the percentage. Take, for instance, the Berridge Estate, in Connemara. It covers a huge area, but its value is not much, comparatively.

59824. That is altogether an exceptional estate—practically the worst. Take the lands that you have got down in Connemara and Mayo, very thickly inhabited, congested estates. These are the places that you want to improve. They are the great bulk of the thing you want to deal with. Do you say that they will be only 10 per cent. of the million?—Only 10 per cent. of the value is represented by the worst estates in my proposal.

59825. Your object is to improve this B class of land, and the C class of land is merely for the purpose of improving the B class of land. A is comparatively good?—Yes.

59826. And you contemplate that 57 per cent. of what you pass through must be comparatively good?—A great deal of B is land that although you lose 20 per cent. on it you are able to deal in a less satisfactory way with it than you would with A, because it is less resourceful. It is land like the Carna Estate, the Berridge Estate, and Inniskea Island; and these are estates which, although you spend a large sum of money on, you cannot very much improve, and they will not be much relieved by migration. They are more remote from the open areas. They are the worst class, and will, I believe, remain bad, no matter what the Board does for them.

59827. So B is not the class of estates to direct attention to?—B is the class of estate of which the poorest districts are wholly or mainly congested, and in which you must look to other means, such as industries, to benefit the condition of the people. Personally, I have no hope that you will be able, through land alone, to improve the condition of the congested districts so as to appreciably improve the standard of comfort of one-half the people in it. I don't think it is possible, in the absence of industrial employment. All you can do is to ameliorate the conditions of life of the population on Class B.

59828. CHAIRMAN.—Your estimate, after all, can only be a very rough estimate, because there must be a great many estates in Class A which, if you had them in hands, would require a considerable amount of treatment. A, I understand, are the estates which are better than B, and have a little untenanted land on them?—The description I give of A is estates on which there was more or less agricultural land

available for migration and enlargement of holdings. They are poor estates, that are mainly tenanted. Then my description of B is very poor estates, on which there is little or no agricultural land available for migration or the enlargement of holdings. Where such an estate is remote from the open areas, from the grass lands, I have all along told you I don't believe that migration can be looked upon as a practical remedy for their relief. I don't believe it is a practicable proposal to transfer from these areas a sufficient proportion of the occupiers to the open areas to relieve the congestion in B. Consequently, no matter what you do with the land, the population of B will remain poor, unless other sources of revenue than the land are made available, such as the establishment of industries, and development of fishing, where the B class is maritime, and all the maritime districts are of the B class. Unless you can provide other means of income for the inhabitants of these areas than from the land alone, they must remain poor; but even if this cannot be done to a satisfactory extent, the condition of the people would be much ameliorated if the lands are striped and their houses improved, so that they may have decent, comfortable homes for their families, even though the able-bodied men had to migrate to other parts of Ireland or Great Britain for portions of the year for remunerative employment.

59829. Sir ANTONY MACDONNELL.—My point is sufficiently made. You say that the loss of 30 per cent. on C and 20 per cent. on B comes to £120,000. You think the price of the B would be only one-tenth of the million?—I mentioned that proportion for the purpose of making an estimate. In practice it will not be possible for the Board to preserve these exact proportions of A, B, and C estates. The Board may have a smaller proportion of untenanted land and a larger proportion of bad estates that they should deal with. I don't believe they can get untenanted land in the proportion of one-third of the whole, and they may have a larger proportion of bad estates, that is B, that they could deal with. If they cannot buy one-third of C estates they can buy more of B, because C and B are the two that involve the largest loss, and in that way they may be able to keep the loss on the gross annual output within a fixed average. Having regard to the difficulty of securing fixed proportions of the different classes of estates for each year's operations I have come to the conclusion that the proposal to fix the grant to be given to the Board at a percentage of the value of estates sold each year is objectionable, and that it would be preferable to have an annual grant placed at the Board's disposal, to be applied at the Board's discretion, to meet the loss incurred in the treatment of estates purchased by them subject to the general understanding that they would sell each year about one million's worth of estates. The Board must be trusted to exercise discrimination in the selection of estates for purchase, and to avoid the purchase of any estates that they are not justified in buying. If it is a Board that cannot be trusted to do that, or will not do it if trusted, it will undoubtedly fail to discharge its functions efficiently.

59830. Does not that entirely conflict with your previous statement, that what you wanted to buy was whole blocks of country, consecutive blocks of country, and not to choose and pick here and there; that if you want to deal with congestion as a whole in the West of Ireland you must abandon the practice which you have hitherto followed, of picking and choosing estates because of their inferiority? That was quite right up to the present, but for the future you would have to buy whole blocks of country, and proceed geographically?—That is not in conflict with my proposals.

59831. Sir JOHN COLOMB.—Is not that, as Sir Antony has pointed out, the very basis of the claim for compulsion?—Yes. That ought to be done.

59832. Therefore, you would have to proceed by blocks, and no longer get an estate here and an estate there?—Yes. Consequently, with that procedure actually in my mind, I tell you that, in practice, it may not be possible to get the proportions which we have in the list, A, B, and C, submitted to you.

59833. Sir ANTONY MACDONNELL.—You have a proportion of 57 per cent. of A, equal to £566,000. What is the relative value of land in A as compared with land in B? Why have you given to A £566,000 and only £100,000 to B? You say you buy a million's worth of land, which will be distributed in classes A, B and C; and of that land Class A will represent 57 per cent.?—No: that is the proportion that A forms of the estates we have dealt with under the Act of 1903 and have sold or are ready for sale. 76 per cent. is the actual figure for the estates that were purchased under the Act of 1903, and are either sold or ready for sale, and I use these figures to make an estimate.

59834. Then this is no indication of the future?—It is, to this extent—that it shows you what loss you will have to incur in future in the treatment of A estates and in the treatment of B and C estates respectively.

59835. That would be true if your purchase of land in A was appropriate to the amount you had bought in B and C, but under the Act of 1903 is not it a fact that you have been buying a lot of C land, keeping it up your sleeve, as it were, for the purpose of improving B?—Yes; we bought a great deal of A land in the hope of improving it by the addition of C land, but we have rather avoided the purchase of B land in remote districts, because we had neither the money nor other means to substantially improve it.

59836. Then this is not a very clear indication of the future. But my point is this. I want some information. You say that you ought to appropriate 33 per cent. of the million to the purchase of C land and 10 per cent. to the purchase of B. B is the thing you want to improve. You ought not to buy more of C land than is necessary for the improvement of B?—And of A.

59837. You say A will be passed through without any loss, as a rule?—No. My point is, we shall be able to do very little good for B by migration. Consequently A and C go more together. B stands almost alone for treatment, and the value of these figures is this: that these bad estates which we have dealt with under the Act of 1903 are, in my opinion, fair types of bad estates in the congested districts, and the loss which we sustained in treating them is very much the same loss as we would have to incur in dealing with similar estates in the future; and I tell you that we have been unable to do anything substantial in the way of migration from B, and have not put these estates into a satisfactory condition; but in the case of A we have done comparatively well for a great deal of A, but we would do a great deal better if we were able to get untenanted land to the proportion of one-third, and especially untenanted land more adjacent to A than we have been able to get it under our present powers; and I explained yesterday that we were obliged to sell some A estates although quite near untenanted land, simply because we could not acquire the untenanted land required to enlarge small holdings.

59838. Sir JOHN COLOMB.—With regard to Class B, leaving them, as you say, in an unsatisfactory condition, was not that due to the fact that you had neither power nor money enough to acquire land to enable migration to be carried out from B, and that, therefore, you were not in the position in which you would be if you were given increased power and increased means of acquiring land?—Not so much with respect to B estates, for the reason that the majority of them are situated in places remote from the grass areas, and the fact that a considerable number of the occupiers of land there will not migrate.

59839. Mr. BRYCE.—And would not be fit for it if they did?—At present they would be the least fit.

59840. CHAIRMAN.—That, to my mind, is one of the chief difficulties in the plan on which you propose to proceed. The B estates are the estates in the worst condition?—They are.

59841. And where congestion and poverty are greatest, and where really a radical cure is the most necessary. If you put on one side any possibility of creating industries then the only real remedy or cure for those estates is to remove a large section of the population, supposing they would go?—You have to assume that they would go, and that you could get the land, and that you could plant them under conditions in which they would be likely to succeed.

59842. The only radical cure for these estates is to remove a large section of the population. I quite understand that at present that is difficult, first because the people have not realised the advantages of migration, and, secondly, because they are too backward to succeed always on the land on which you put them; but if you buy any large proportion of those estates at present, and re-stripe them and resell them, you make it impossible in the future to deal with them when perhaps a more enlightened spirit might be abroad. Would not it be better to leave those estates for the present, and confine your

Jan. 23, 1908. Mr. Henry Doran.

attention more to A and C, and allow time to elapse, in the hope that as regards those on B estates agricultural instruction may benefit the people, and may educate them, and that they may be more willing in a few years to follow the example of people from A, and migrate. But the more you deal with B estates now the more you make it difficult to deal satisfactorily with them afterwards?—No; I think that is a fallacy, if you will excuse me for saying so. I think our treatment of B estates will make it much more easy to deal with the landholders in the future if they are willing to migrate, because it is mainly these estates that are held very much in mixed or rundale plots. We give a landholder in two, or sometimes three, parcels an equivalent value of land to that now held in, perhaps, twenty or more plots. Then we improve the houses, or get the occupiers to improve them themselves. We never build a house for landholders, we do not remove in the striping, but we have a Houses Improvement Scheme in operation, under which they get free grants, usually from £7 to £10, for building a new house, or smaller sums for substantial improvements to existing houses carried out in accordance with our specifications, and we also, where we consider that the holding would be security for it, add a sum to the sale price of the holding up to £25, which we give the landholder as an advance, to be repaid in the annuity. When we have striped the B estate and had many of the houses greatly improved, if half the people leave afterwards all that would have to be done would be to add the vacated stripes to the stripes of those who remain, and to do this little or no fencing or expenditure would be necessary.

59843. Then you don't think that buying an estate and re-striping and re-selling it to the tenants will render more difficult future migration operations?—By no means. It is only a stage towards progress. On the Dillon estate, if we can get suitable land, I know many tenant-purchasers who will migrate, and there will be no trouble in amalgamating the vacated holdings with the adjoining striped holdings.

59844. Will that entail pulling down a lot of houses that have been improved?—There are many bad houses there yet.

59845. Mr. SUTHERLAND.—In the event of joining two holdings you would select the better house?—Yes; the better house always.

59846. Sir JOHN COLOMB.—Carrying out that policy involves this, that you are using up C for the amelioration of A?—Yes.

59847. Therefore, when you come in the process of time to tackle B you have used up the means of doing it because you are restricted within a given area, and there is only a certain amount of land available?—Then if we have done that we have utilised it for the people who are more suitable than B, and who are most convenient to the C area. There is no reason why B should have priority over A in the distribution of the grass lands.

59848. But it does involve the outlook of B, beyond amelioration in its internal conditions, being stereotyped as it is?—Yes, and B will be more or less stereotyped no matter what you do.

59849. Have you thought of how you can justify a large expenditure of public money that is going to leave the worst places practically untouched. We want so many millions for the work of improvement. How do you justify, in your own mind, a deliberate policy of leaving the poorest estates with only a minor amount of amelioration?—You would be perfectly satisfied with the results, in my opinion, when you consider the only other alternatives. The only other alternatives are migration or emigration. The migration of any considerable number of the B occupiers is out of the question. It cannot be done at present. If the first and only object to be secured was to provide economic holdings for the number of landholders who could obtain a fair living from B, the surplus population would, I believe, emigrate, if they got liberal assistance, and this would be less costly than the substantial amelioration of their condition if they remain where they are. I think, however, very few people will argue that emigration, even from B estates, ought to be facilitated. In those poor areas if you can settle a peasant in an allotment, using the English word, where he has a home affording decent accommodation for his family—turbary for fuel, the grazing of a couple of cows to give milk to his children, and where they can keep fowl also—the great bulk of them, although poor, will lead happy, contented, and good lives, and will always be a very valuable asset to Ireland if it can employ them as labourers, and when Ireland cannot employ them they are a valuable asset to England as migratory labourers.

59850. Then it might be asked why spend all this money on A when you are not spending any on B?—In Class A the remedy is in the neighbourhood of the landholders' homes, and in B the same remedy is not at hand, and you must either improve them in other ways, or facilitate them in clearing out of the country altogether.

59851. Sir ANTONY MACDONNELL.—What you propose to do for B is this. You propose to put the farmers into the very best condition to receive the advantages from the Department of Agriculture, to make them ready for intensive cultivation: you cannot extend the area?—Yes; to spend money freely in assisting to provide decent houses to live in, in fact, I would spend more money on the houses than on the land. Nothing appears to have a more stimulating or elevating effect on the habits of a peasant's family than a good house, when the members of the family feel proud of it, and take a pleasure in keeping it and the surroundings of their home clean, tidy, and cheerful.

59852. Mr. SUTHERLAND.—How were the houses in Carna built?—The landholders built most of them themselves. We only build new houses for persons we move in striping, and the people put up four times as many houses themselves under our House Improvements Scheme and parish committee grants, which are very small. I would aim at having B the part of Ireland containing our reserve of surplus labour, and have the people decently housed. If they have to go to England as migratory labourers the conditions under which they travel to and fro and are housed in England should be supervised, and made as less irksome as possible.

59853. I think you made a remark that you were not able to deal satisfactorily with the migrants whom you had dealt with already; does not that mean you had not been able to do enough for them in starting them on their own holdings?—That was not to-day.

59854. In answer to Sir John?—I don't think so.

59855. Is it the case you would like to be in a position to do more for the class you migrate before you leave them to their own resources?—No. I think we have done enough for them; but I think after we put them on the land they should get assistance in the way of agricultural education and direction. That is the further aid that I would ask for them. The Board must be trusted to exercise discretion in the selection of estates for purchase, and to avoid the purchase of estates that they are not justified in buying; for if they do not do this, and that their output be confined to estates worth one million a year, the length of time which would be required to deal with all unsold properties in the counties containing congested districts would be very long. I anticipate that there will be very great dissatisfaction at the delay necessarily incurred in the transfer of the ownership of holdings on poor estates in the counties containing districts when the output is confined to one million a year, and it occurs to me that legislation should provide for dealing if necessary with a larger output of estates needing treatment when the owners willing to sell and the tenants willing to buy represent property of value in excess of the million a year.

59856. Sir ANTONY MACDONNELL.—There will be no legislation at all, as I understand, but an executive order allocating a certain amount of money to the Congested Districts Board?—The untenanted lands dealt with were sold at the prices paid for them. The tenanted estates paid at least two years' rent, and some of them three or more.

59857. Sir JOHN COLOMB.—Before they got the vesting order they were tenants of the Board for two or three years: is that what it means?—Yes; we got two or three years' full rent. I mention this in connection with the loss. That was a source of revenue. It is hardly necessary to point out that a similar class of estates cannot be similarly dealt with at the same loss if the untenanted land is not purchased at a price at which it can be sold, or if the revenue from the land while on hands be substantially reduced.

59858. Sir ANTONY MACDONNELL.—But it never has been yet?—No; but I am anticipating that you may yield to the demand that the Board should only charge interest the same as the Estates Commissioners.

59859. Then the loss would be more?—Yes. I may, however, point out that the loss on the estates purchased under the Act of 1903 includes cost of surveyors, paymasters, and clerks of works, which ought properly be charged to administration. I am informed that the Estates Commissioners do not charge to any estate the cost of surveying, valuing, management, or engineering expenses, in fact, none of the expenses incidental to the supervision of the improvement or resettlement of estates, except the wages of gangers, who superintend the workmen.

59860. What are they charged to?—They are charged to administration.

59861. Is it in the votes?—Yes; in the votes of the Land Commission. All the office charges are in the vote for the Land Commission. To sum up now quite shortly, what I want to impress upon the Commission is that the estates we have dealt with under Class A are typical, so that you may take it for granted that the loss to be incurred on the A estates will not be much less than it has been in these estates if the same amount of work is done. It will be no less for B, and it will certainly be no less for C. So if the Board have to proceed geographically, as Sir Antony MacDonnell said, in the purchase of an area of a county, we may have an excess of A over B, or of C over the others. If we cannot preserve the proportions which are indicated by the results of the estates in the list, I submit that it would be objectionable to fix the revenue of the Board on a varying percentage of loss, and that you ought to suggest, "We shall give you £150,000 or £170,000, and you are expected to turn out a million's worth of property per year." If, on the other hand, you allow the whole of a county to be purchased and sold by the Board, as was suggested yesterday, the percentage of loss would be lower on the output.

59863. Do you think that would be a practicable thing, to spread the percentage of loss on improving estates over the price of estates which don't want any improvement, and on which no improvement is effected? What you want to know is how much it costs you to improve these estates; what percentage of the purchase money does it cost you to improve these estates? Why, in order to have the fictitious appearance of a small percentage of loss, should you bring in estates which are not improved at all?—I don't argue in favour of it at all, but what I say is that the percentage of loss will vary if estates are purchased of which a large part do not need treatment, and also with the proportions which A, B, and C form in the volume dealt with.

59864. But what I thought you were coming at was to indicate or suggest to the Commission a percentage of loss which would take count of the varying losses incurred on these different classes of land, and that then you would be able to suggest to us a percentage of loss which we should be safe in adopting?—I am in a difficulty, as you have not settled whether the Board shall purchase portions of estates not needing treatment. I was asked yesterday what suggestion I had to make with regard to an estate, portion of which was congested and needed treatment, and ought not to be sold without treatment while the remaining portion was of a character that did not need treatment. My suggestion was that the Board should divide the property into two sections, scheduling one as a separate estate to be sold direct to the Board, that is, the part needing treatment, and informing the owner that they were prepared to declare the other portion to be a separate estate for direct sale. The difficulties in that were fully discussed, but I have thought over it since, and I have now to make this proposal: that in all cases where the Board find that portion of an estate needs treatment they shall signify to the owner their willingness to buy the entire estate, that having arranged with the owner a price for the entire estate, they will then divide the estate into two sections, one being the part needing treatment, and the other being the holdings that may be sold direct, and they will get each of the tenants occupying the holdings which they do not desire to purchase to sign an agreement to buy his holding at a specified price, provided the sale to the vendor is completed.

59865. There is no difficulty in that. That is the universal practice of the Estates Commissioners?—And the Board would not get any of the other tenants to sign agreements. That is where the Estates Commissioners' procedure would not suit us.

59866. It would suit us; but, however, go on?—We would not get anyone whose holding we were going to alter, enlarge, or interfere with in any way, with regard to turbary or anything else, to sign an agreement, but we would agree with the landlord for the bulk price. We would get all the tenants whose holdings we proposed selling at once to sign agreements, and the week after the estate was vested in the Board they could get each of these persons to sign agreements, and that portion of the estate would be dealt with without any loss.

59867. Mr. KAVANAGH.—If the tenants would agree?—They will agree before we purchase.

59868. Before you have made your offer to the owner?—Yes. We value the estate. We get into touch with the tenants. We ascertain what the tenants on one section of the estate would be prepared to pay, and what on another, and all that. We have always to do that in estimating the price of an estate. After negotiations with the tenants we make up the gross price, which we ask the landlord to accept, subject to the condition that three-fourths of the tenants on the portion to be sold direct will sign undertakings to purchase at the prices making up the offer. Then we go back to those tenants whose holdings we do not propose to alter, and we say to them, "We are willing to sell your holding to you for twenty-two years' purchase, or whatever it is, provided the sale goes through. If you sign an undertaking now we will put you on interest at once, and ask you for no rent." They will always be prepared to do that, because tenants whose holdings are not to be improved are willing to buy without delay, and there will be no difficulty in practice in arranging that.

59869. Take the case where the landlord will not take your price?—He holds on as landlord, or the Board buys the whole estate by compulsion.

59870 Sir JOHN COLOMB.—Take an estate on which a portion needs improvement and another portion does not, and on which the grass land is in the owner's possession, and unless you can agree to a price for the grass land it is obvious that the thing must fall through?—Yes, unless you agree as to the gross price.

59871. That is so?—Yes.

59872. But meantime you must have the grass land. What are you going to do? Are you then going to apply compulsion in order to get the grass land?—In that case it would be the duty of the Board to apply compulsion for the entire estate.

59873. That is, the landlord having had the desire to sell his estate, and contemplating selling it direct, has come to the Board. Then the Board takes up your procedure, and the landlord finds that he has drawn upon himself all the powers of compulsion by his own act; and because he intimated that he thought he could agree with his tenants and get a certificate, that is the result?—No. It would be only in cases where the entire or any portion of an estate needed treatment that the Board would make an offer of it. If the entire of an estate is one that the Board do not desire to purchase, that does not need treatment, they immediately notify the owner that they are prepared to certify it to be a separate estate, and he can deal with his tenants himself.

59874. Take the case of an estate on which the tenanted land does not need treatment, but on which there is grass land in the landlord's own possession?—I call that an estate needing treatment. If an estate contains a substantial area of grass land for division I would call that treatment. I would say that estate should not be sold direct. I think everybody agrees it is not desirable to facilitate direct sale on estates with untenanted land.

59875. Sir ANTONY MACDONNELL.—There is an estate, 80 per cent. of which needs no treatment and 20 per cent. needs treatment. You get agreements from the tenants of the 80 per cent. before the thing is declared an estate and passed through. That is an easy matter, as you say?—Yes.

59876. Because if the holdings do not want improvement the tenants will naturally jump at not only the reduction of price on sale, but also at being put on interest instead of paying rent. That is the universal practice of the Estates Commissioners in operations under Section 6; but there is, furthermore,

Jan 23, 1908.
Mr. Henry Doran.

the practice in regard to the 20 per cent. that needs treatment, because if it be treatment of a very detailed kind, migration, and so on that you refer to, perhaps there might be difficulties in some cases, not in all; but, as a rule, the Estates Commissioners indicate to these tenants, this 20 per cent., what method of treatment they propose to apply to their holdings, striping, re-arranging, and so on. They make out a scheme—I am not talking of what I do not know—and the whole thing goes through, for the 20 per cent. as well as for the 80 per cent. When the whole thing goes through they set to work to carry out the scheme, but the thing is settled beforehand?—That is to say, they get all these tenants to sign.

59877. Yes. They get the twenty tenants to sign for the improved holdings?—The result is that the Estates Commissioners have declared that the procedure is so difficult that they have not dealt with congested estates.

59878. I don't know anything of the sort. They stated they have not bought congested estates for an entirely different reason, connected not with the tenants but with the price payable to the landlord?—I won't attempt to argue it, Sir Antony.

59879. I know what I am talking about, because I have made it my special object within the last three weeks to look into it?—Then there can be no objection to my proposal at all.

59880. None at all?—Except this, I am sure you agree with this, that you should not allow the people whose holdings you are going to alter next week to enter into agreements to buy their holdings at a specified price.

59881. I don't object to that. I don't object to your leaving them out?—The Board have found it impossible in many cases. For instance, where a man's holding has surplus turbary. His rent may be £3, and he might have 100 acres of bog. If he signs an agreement to buy his holding without any reservation, he will not permit the turbary to be allotted to other tenants.

59881A. I don't object to your reserving it; but there are very many cases in which you can do it before the sale?—There would be difficulty if agreements were signed.

59882. Not at all; it is the common practice?—We don't enter into agreements to buy before the holdings are rearranged.

59883. Mr. BRYCE.—You say you think that fixing the revenue of the Board on a percentage of the loss would be altogether objectionable, and that you would prefer an annual grant. You mean an annual grant of a varying amount should be stated each year on an estimate?—I think it would be better to name an amount. Allow them, say, £150,000 or £170,000 to lose on the treatment of estates.

59884. You mean that you would put in a new Act a certain annual sum, or would you allow it to be fixed each year on an estimate?—I think it would be better to put a sum in.

59885. In the Act?—In the Act. If you have to apply for it annually it must be on the basis of a percentage or it must be to cover your loss.

59886. It is a matter of great importance, because it is the kind of thing you cannot change if it is in an Act without another Act?—Yes. I have come to the conclusion that the proposal to fix the grant to be given to the Board at a percentage of the value of the estates sold each year is objectionable, and that it is preferable to have an annual grant placed at the Board's disposal, to be applied at the Board's discretion.

59887. CHAIRMAN.—You must base your grant on something?—On the output, which involves a loss of from 14 to 18 per cent. per million output of mixed estates.

CHAIRMAN.—You must base it on the percentage of loss, I think.

Mr. BRYCE.—That is what Mr. Doran says he does not like.

59888. Sir JOHN COLOMB.—Mr. Doran does not object to the percentage being based on the annual grant, but the Board being tied down in its application in a particular year to a particular estimate for a particular year?—Yes; on the ground of insisting that they are to turn out a million's worth to be allowed so much.

59889. Sir ANTONY MACDONNELL.—If you got whatever percentage emerges from all these calculations you submit to us the Board shall be at liberty in any year of its operations to lose 17 per cent., leaving to them the allocation of the loss, 100 per cent. in one case, nothing in another, 5 per cent. in another, and so on—would not that meet it?—I would like it were made perfectly clear in making their recommendation that the Commission had come to the conclusion that very variable losses were necessarily incurred in dealing with different classes of estates, and that the percentage named by them was the average for all classes of estates, so as to prevent people from clamouring for the average percentage of loss in the treatment of each estate.

59890. Mr. SUTHERLAND.—How would that prevent them?—You would have that answer.

59891. Sir ANTONY MACDONNELL.—You must trust to the Board to arrange that?—Yes.

59892. Mr. BRYCE.—If that is the actual method by which things are arranged by the Estates Commissioners it amounts to the same thing as you ask for; because you take your output, you allocate certain grants that amount to the percentage, you are not bound in each particular estate as to the percentage. There is nothing objectionable in the other method?—If it is clearly stated that on some estates there will be a very small loss and on others a very large loss, and that the average would work out at a certain amount, I would consider it far more satisfactory; but I may remind you that the Estates Commissioners' section is in doubt.

59893. You mean the interpretation. It is working all right, but the working of the Act is doubtful?—I am informed it is not being worked. It is 10 per cent. on congested estates, and they have only purchased a few congested estates.

Sir ANTONY MACDONNELL.—They have only bought four on account of the use of the words, "with the consent of the owner," in section 6 (4).

59895. CHAIRMAN.—To turn to another subject—the parish committees. We have been told that the parish committees are doing good work, principally with regard to the improvement of houses, the removal of manure heaps, and so on. If you have a sufficient sum of money to enable you to buy blocks of land geographically, as has been suggested, does not it seem to you that on those blocks which are bought there is no longer any need for a parish committee?—No. I don't take that view at all, because you want to deal with the blocks of land rapidly, in two or three years. During that time the landholders are in the Board's employment carrying out estates improvement works, and comparatively few of them do anything on their own holdings or to their houses, before the estate is settled, and we cease employing them. In the idle time of the year they do the work under the parish committee schemes; and the house improvement scheme in most of these poor districts is too slow to permit of its being withdrawn on sale of the estate.

59896. Yes; but my point is while the property is in your possession cannot you take steps to insure that these houses will be improved?—It would be too big a job altogether, and too slow. You could not get them to do it quickly enough. It would enormously increase the loss, because you cannot force the people to get the houses improved in that interval while we have so many of these men employed. Much more liberal assistance is given to tenants under the Estate Improvement Schemes than under the Parish Committee Schemes.

59897. It seems ludicrous that you are able to buy an estate, with all the powers of a landlord, unfettered by Acts of Parliament of all sorts, and with an enormous sum to lose on the improvement of the estate, and that at the same time it should be necessary to have another organisation so largely financed?—While an estate is in hands we only aim at carrying out the works that are absolutely necessary. A great deal remains in the way of improvement of buildings and other works that are very desirable.

59898. Sir ANTONY MACDONNELL.—Don't you already overlap the work that the parish committee does?—No.

59899. The parish committee has been largely concerned up to the present with the improvement of houses?—The scheme extends over the entire congested districts, it is not confined to estates purchased by the Board.

59900. I know that, but you give advances for the improvement of houses; you have regular schemes for the improvement of houses?—We have.

59901. So far as that scheme operates, and so far as the parish committee schemes are restricted to the improvement of houses there is overlapping?—No; because it is not possible for a man to get a grant under a parish committee scheme and a grant under the houses improvement scheme, when we are dealing with the estate on which the holding is.

59902. You take steps to prevent overlapping?—Yes. The conditions which we offer for the improvement of their houses while we are dealing with the estate are much more favourable than the conditions under the parish committee schemes. A fair number take advantage of the better conditions when we are dealing with the estate, but a great many cannot be induced to carry out desirable improvements while we have employment for them at full wages.

59903. CHAIRMAN.—You keep an estate, as a rule, two or three years?—Yes.

59904. In three years don't you think that everything that could be done reasonably in the way of the improvement of houses and so on could be done?—No; very often we have every man on the estate who is willing to work employed for two years, road-making, and at drainage and fencing.

59905. They are not engaged all the year round. They are only engaged in the winter, and can work at their houses the rest of the year. They are not always away?—When they are at home we employ them at road-making and drainage in the summer and fencing in the winter, and other things. We do everything we can to take advantage of our house improvement schemes in every way we can, yet a very large proportion of bad houses remains on many estates.

59906. Then the parish committee extends beyond the Board's work?—Yes. It extends to the whole congested districts.

59907. Even to estates that the Board don't intend to deal with?—Yes. If they are within the congested area.

59908. Is it within your experience that since the Act of 1903, since the creation of the Estates Commissioners and the granting to them of powers to create tenancies among sons of tenants that the work of migration has become more difficult?—Much more difficult, because before then there was none of this agitation in the neighbourhood of grass farms that is now so serious. There was no cattle driving nor active hostility against what are called "strangers" getting holdings on the grass farms.

59909. Sir ANTONY MACDONNELL.—You say that that has arisen since the Act of 1903?—Yes.

59910. Cattle-driving and all that agitation to prevent the letting of grazing farms have been known long before 1903. The same object was taken up by the Plan of Campaign in 1888, when the new League was organised?—I can only speak from my own knowledge of cattle-driving, and I don't know any place where it was practised before 1903.

59911. CHAIRMAN.—Have there not been a good many new tenancies created for sons of tenants around Castlerea?—Yes. In fact the seventeen new holdings in the neighbourhood of Castlerea have been given to sons of tenants, except two.

59912. By the Estates Commissioners?—Yes.

59913. The Estates Commissioners have created tenancies in that locality among sons of tenants, and have made the work of migration on adjacent lands more difficult?—Much more difficult for us, and for themselves, too; because now what happens is the smallholders adjacent or in the neighbourhood of those grass lands who have one or more sons openly state that their sons have a prior claim to any stranger for a holding. We have had a very strong letter from a man near one of these grass farms who has four fine young fellows, sons. He declares that nobody will be allowed to take an acre of the land adjoining his farm until his four sons get four holdings. That is only a threat, but still the agitation is very effective at present in the way of frightening people away.

59914. I don't want to ask a question which in any way makes your position difficult or will create any friction between departments, but don't you think that the Estates Commissioners having, perhaps, been forced to create tenancies among sons of tenants, having become committed to that policy, to a certain extent, it would be very difficult for them if they were charged with the work of migration in Connaught to concentrate sufficiently upon the relief of congestion? Would not they be continually hampered by what they have already done, and would not they be continually hampered by claims from the sons of tenants for land?—I don't think so, if the law were altered. Nobody finds fault with the Estates Commissioners in the matter, and I consider that it was their function and duty to provide these holdings under the administration of the Act of 1903.

Jan. 23, 1908 — Mr. Henry Doran.

59915. That is not my point. What I mean is: unless you could put back the clock and take away from them the duty of giving land to sons of tenants, which, personally, I don't believe for a moment you could do, would not you be very much hampered in dealing with grass lands?—Unless you could do that you certainly would; but I would like to say this, that, in my opinion, unless the power is taken away from the Board also of giving holdings to sons of tenants, even the limited power they now have, they will find it impossible to carry out migration on a large scale.

59916. You have not given any holdings to sons of tenants?—No; except four, in the County Galway.

59917. My point is, there is a difference between you and the Estates Commissioners in this way—although you may have the power to do it you have not, as a matter of fact, done it?—No.

59918. And you are regarded by public opinion as the authority principally concerned with congests?—Yes.

59919. Whereas the Estates Commissioners have given, perhaps, perfectly rightly, under the Act, land to sons of tenants much more largely?—Yes.

59920. And are regarded by public opinion as the body who will give land to such people?—And whose duty it is to plant the lands with such persons.

59921. If you put the responsibility on them of carrying out migration in Connaught won't you find that their history in the matter handicaps them in dealing with congests?—They cannot do it satisfactorily if the law remains as it is.

59922. Sir ANTONY MACDONNELL.—I deem it my duty to call attention to the terms of Section 2 of the Land Purchase Act of 1903. It runs in those terms: "In the case of the sale of an estate advances under the Land Purchase Acts may be made for the purchase of parcels thereof by the following persons—(*a.*) A person being the tenant of a holding on the estate; (*b.*) a person being the son of a tenant of a holding on the estate." That is the second duty of the Estates Commissioners: first to give land to tenants of holdings on the estate, and next to give it to the son of the tenants of a holding on the estate?—They don't confine themselves to sons of tenants on the estate. They have given holdings near Castlerea to sons of tenants on the Dillon and De Freyne estates purchased by the Board.

59923. The Estates Commissioners are appointed to carry out a certain duty under this Act, and are fulfilling their duty by giving holdings to sons of tenants. They would not be fulfilling their duty unless they did do that?—No.

59924. You are appointed a body for the relief of congestion. You have no power under your law to give a new holding to anybody who is not a congest?—You have.

59925. You have no power under the law to give a holding, where it is possible to relieve congestion by giving a holding, to a man who is not a congest, and thereby deprive a congest of the land?—But you have power to give the surplus land to sons of tenants.

59926. You have power to apply the remnant. If any remnant is over you can apply it?—Yes.

59927. Sir ANTONY MACDONNELL.—What I wish to point out in reference to the remarks of Lord Dudley is that the Estates Commissioners appointed to perform a duty have performed that duty. If the law is changed, and imposes another duty on them they will perform that other duty, and their method of performing their former duty will not in any way militate against the effective performance of their duty if their duty is altered.

59928. Sir JOHN COLOMB.—At all events, you individually knowing the work of the Board, do think that this Commission should express its strong opinion that in no case in a congested district should any untenanted land whatever be appropriated to anybody but congests, for congestion cannot be relieved if the sons of tenants are to have any of that land?—Most emphatically, I am of that opinion—not only in the congested districts, but in all the counties containing them.

Jan. 23, 1908.

Mr. Henry Doran.

59929. Suppose the whole of Connaught—we will take Connaught alone—were handed over to the Congested Districts Board, then you consider it would be most desirable that the Commission should express a strong opinion that sons of tenants should be ruled out; I mean to say that there should be no claim, or that if appropriations of any of this available land are to be given to sons of tenants, it means that congestion cannot be relieved?—Yes, and that agitation will continue.

59930. You want to be backed, so that you can dismiss the claim by saying: "We cannot do it; there is the law based upon the Commission report; it is not our fault; don't blame us; you must get the law altered if you want us to do it"?—Yes.

59931. But so long as there is a doubt about it, so long as there is this vague idea that it is within your power, your work is blocked?—Yes; blocked mainly by the young people in the neighbourhood of the lands.

59932. Mr. BRYCE.—Suppose you buy these blocks of land, and find that owing to agitation you cannot migrate your people, on account of scrimmages arising and so on, what are you going to do?—I would not buy huge blocks of land in that way without feeling I was on safe ground, and knowing that the land acquired was passing satisfactorily to persons who had surrendered land for the relief of congestion.

59933. Mr. SUTHERLAND.—In any case you have no power to give any land except to congests?—We have.

59934. Sir JOHN COLOMB.—You have given us in your memorandum your experience of estates dealt with since 1903, and of course it is valuable as far as it goes as an indication. Can you suggest to the Commission any possible way of arriving at a conclusion as to what is the distribution of these estates within the area, that is, what proportion of the estates in Connaught, say, are A, what proportion are B, and what proportion of the estates are C?—I have not material from which I could supply a correct classification.

59935. Is there any machinery or means by which within a reasonable time an approximate idea can be formed by the Commission as to what is the real condition of distribution of these estates within the area that is proposed to be handed over to the Congested Districts Board. Can you give us a clue to find that out?

Mr. KAVANAGH.—Don't limit the question to Connaught.

Sir JOHN COLOMB.—Take the eight counties. Can you give us any information enabling the Commission to estimate approximately what is the proportion of A, B, and C in that district?

59936. Sir ANTONY MACDONNELL.—You ought to be able, having regard to the valuation. You know how many under £4, how many between £4 and £10, and how many over £10?—That would not separate A and B.

59937. All C would be over £10?—Yes.

Sir JOHN COLOMB.—That would only give you holdings, but not estates.

59938. Sir ANTONY MACDONNELL.—You could get an indication by looking through the valuations of estates?—The only way in which you could get anything like an indication would be from the Valuation Office; or you might get it by communicating with the owners who have not sold their estates in the counties containing congested districts.

59939. There is no means of getting that in time at our disposal?—The only other way would be from the General Valuation Office Returns. If you don't get it fairly accurate it might be misleading. It would take a long time.

59940. CHAIRMAN.—As it is, all your calculation here is hypothetical?—The figures of the properties A and B that I have given you are from actual experience, but I have added one-third proportion of C land. That is the only hypothetical element in the figures supplied.

59941. You tell us that from your experience you have lost 9·4 per cent. on Class A?—Yes, and 21 per cent. on B. That is the average of all estates in each class.

59942. You estimate now you are going to lose 5 per cent. How do you estimate you are going to get down from 9 to 5?—Because in dealing with the whole county there would be a larger percentage of A of better quality than the estates dealt with in my schedule A.

59943. Sir ANTONY MACDONNELL.—You draw an inference of the whole state of the country you are going to cover from these examples. If these examples had been taken geographically you might have been able to draw an inference of the sort; but these examples have been taken chequer board all over the country, and you have taken up the worst estates?—I would ask you to accept my statement that the estates are types of the estates A, B, and C that you have to deal with, but we would be likely to have a larger proportion of better class A estates than those in my list.

59944. I admit that, but what I want to know is the distribution: how are those estates typical of the whole state of the country?—I am not able to tell you in what proportions.

59945. How can you say so many estates of the A type in those counties?—I have told you I cannot say that, but I think that all the estates to be dealt with, excluding the good estates that would be allowed to be sold by direct sale in the way I suggested yesterday or this morning, will be of the types A, B, and C.

59946. Mr. SUTHERLAND.—It would be all the same for your purpose if you had only three estates? It was only for the purpose of comparison of classes?—If I am sure they are fair types, if you adopt the suggestion made this morning of allowing the Board to buy an estate, selling directly the holdings not needing treatment, you will only have included in your output of a million entire classes of estates similar to those I have given, and your percentage of loss will not be less than these figures, except to the extent to which a better class of A estates will come in.

59947. CHAIRMAN.—You explained that in future the loss on Class A will be less than it has been, because you will find better estates of Class A in the wider area?—Yes, in a larger proportion.

59948. By Class C you say you have lost 25 per cent.?—That is an easy case to estimate. There is no doubt about that at all.

59949. Why do you put it down at 30 per cent. now?—Because you are coming into the open areas, with a small population, where labour is much dearer, and the cost per holding will be more. I instance an estate where we had to import thirty labourers to a grass farm near Castlerea, and to provide special accommodation for them in an out-building, and we have them there still. They are costing us at the rate of 3*s.* a day. Each has a payment of 3*s.* a day, besides finding them in milk and fuel. In other places the wages is 2*s.* per day.

59950. Sir JOHN COLOMB.—The ground for the claim of compulsory powers to the Board is based upon the necessity of the Board dealing with large blocks of districts?—Yes.

59951. That is the whole ground of contention, that compulsory powers are necessary. Can you tell me this: what is your view, assuming you got these powers, and that you had the increased money and increased powers, as to how you are going to select one district and exclude others? Can you give me any notion of the principle to determine the action of the Board? In selecting the districts in order of precedence, what claims would you take into consideration?—I would consider that they should operate in all the counties at the same time. As to the mode of starting, that would be regulated by the particular district in which they start, and by the estates offered to them at the beginning of their operations.

59952. Then your determination of a district to be operated upon would depend upon the voluntary offer of the landlords to sell?—Yes, in the first instance. I would begin with the voluntary purchases certainly. I would extend from the first centre. I would have several districts. Just take the County Mayo. I would, say, have a list of ten centres in Mayo scattered over the county, with ten resident officers, and each of them would begin with one estate, and they would widen out their field of operations until the ten met, working in different directions.

59953. And the selection of the ten centres would depend upon a particular landlord offering to sell?—It would, at the outset; and then, when you establish yourself in a centre, where the landlord has offered to sell, and you come in there under favourable conditions, without making any trouble, the adjoining landlord will probably offer. That is our [illegible]

experience. Whenever we get an estate we are almost invariably offered adjacent estates. We gradually enlarge our area. We are not in a hurry to apply compulsion at all, and we ought not to be. It would be only when a landlord does not offer an estate that it is desirable to acquire, either tenanted or untenanted, that you should apply compulsion.

59954. But you may take it that the centres have been established by existing operations?—Probably that would be, to some extent.

59955. You take one of these as a centre, and say, "We are going to enlarge this area." Do you suggest your first duty would be to approach the next landlord?—Yes. We have no trouble in doing that. Landlords very rarely make objection to a discreet inquiry as to their willingness to sell. If we get to Belmullet, or any other centre you like, the first thing we do would be to inquire from the agent or owner of desirable estates in the neighbourhood if he could see his way to offer the estate to the Board, as we were operating in the district; and I believe that by proceeding quietly like that we would make satisfactory progress in our negotiations.

59956. Suppose the landlord says no, do you suggest going off somewhere else, where the landlord says yes, or do you proceed to enlarge the district by exercising your compulsory powers?—If he says no, and the estate needed treatment, I would recommend the Board to apply compulsory powers.

59957. Mr. Bryce.—Don't you think your estimate would be very seriously out if you cannot make an estimate of the distribution of the A, B, and C estates? You may try to arrange it in the proportion which you have estimated by buying a certain number of estates of each class, but if, coming towards the end of your operations, you find an accumulation of B estates your estimate will be utterly out?—We would have to abandon the purchase of the others for the time and lose all we had on the B estates, and the output would be less.

59958. In the long run, if the percentages are not in accordance with the experience you have already had of the percentage of A, B, and C you will come to a time when you cannot get it right, even by delaying your purchases?—It would be regulated by the Board.

59959. You may work it from year to year during a great many years but you will come to a time when the accumulation of estates will leave them nothing to average it with. The classification of holdings is no guide, because it depends on the nature of the estate?—I don't see how that would come.

59960. It must come if you don't know the proportion?—We do know when we inspect an estate.

59961. But if you don't know the total number of A estates you are going to deal with? Suppose you are going to settle the question of congestion, you may find that the total number of B estates is much greater than you imagine, how are you going to do it; for if you endeavour to arrange it by the proportions A, B, and C you will come to a moment when nothing but B is left?—If that were to happen then I would cease buying C and apply my whole revenue to the treatment of B. I should say migration; and migration cannot be used much in connection with B. That is much on the seaboard. I think when you limit your output to a million or a million and a half I think you should be always able to so group your estates that you could keep them within the estimate.

59962. Yes, if you are perfectly certain that there is a certain number of A and B estates to be sold and a certain number of C lands to be still available; but if you find that you have been seriously out in your experience, and that this output you have had is not representative of the total number, you will come to a particular moment when you will find that you can no longer maintain that proportion of that particular class?—I feel quite certain as to the existence of Class B and the certainty of being able to buy them, but as to the certainty of acquiring one-third in value of Class C I am doubtful. If the proportion of B or C estates as compared to A estates was higher in any year than the proportion I suggested the output would be correspondingly reduced.

59963 Sir John Colomb.—Does that mean if you got a million a year for the purchase of land you could only buy in a year one-third of a million of Class C?—I would not say in any one year, but I could not have more than a million's worth of Class C in hands at any time. We are empowered to have that

59964. Mr. Bryce.—You are doubtful of getting the proportion of C so long as you are restricted to Connaught. If you were enabled to go out to Westmeath there would be no difficulty in getting enough of C?—You would have the further difficulty of the people.

59965. Chairman.—I want to ask you whether you think you have made a sufficient allowance in estimating the loss on Class C, for the fact that with compulsion you will have a large amount of grass land, at least an adequate amount of grass land, and, therefore, you will be able to offer a substantial inducement to large people to migrate. You told us yesterday that one of the reasons why dealing with land in Class C was so expensive was that you had not been able to move the larger men. You had to remove the small men, which entailed two sorts of expenditure—one, a considerable number of extra houses, fencing, and soforth; and the other, that the occupation interest of the people moved was not very great, and, therefore, you were not able to recover that?—If we can get larger people to go our loss will be less.

59966. If you have an adequate amount, one-third of grass land, and a good deal of that land lying in proximity to the estate that you are treating your difficulties in that respect will be lessened?—They will.

59967. Won't your loss, therefore, be considerably lessened?—It would be.

59968. You have actually put the figure in Class C higher for the reasons assigned—the wages of labourers are higher than they have been. You have increased the figure from 28 to 30 per cent., and you say that is because of the increased cost of labour, and so on?—That is my reason.

59969. Have you, as a set-off against that, made sufficient allowance for the advantage of being able to move bigger men?—No; I have not, perhaps, made sufficient allowance, because I am doubtful if they will go; and again, there is a very small proportion of big men even on the A estates in the congested districts, and there are none at all in B practically. You may remember I informed you when giving my evidence on the Dillon Estate, on which there were 4,300 tenants, with a poor law valuation of £20,000 a year, that there were only 254 tenants of £10 valuation and over. They were the only big men there who would come out. Within the last three weeks we migrated about twenty men from the De Freyne Estate on to grass lands near Castlerea, and they were nearly all men with small holdings. We gave them from £16 to £25 holdings.

59970. You don't believe you will get any substantial relief?—We will get more than we did, but we will not get a sufficient number to seriously affect the proportion of loss.

59971. Therefore, you don't consider that the fact that you will have more grass land in proximity to the estates you are treating will have a very great effect?—It will have some effect, as I have mentioned several times, if we can get the larger men out.

59972. At any rate according to the estimate you have given us it will be a smaller effect than the opposite effect resulting from the increased cost of labour?—I am afraid it will.

59973. Sir John Colomb.—I asked just now if you could give us any clue to ascertain the probable proportion of these three classes. I ask another question now. Can you give us any approximate idea or tell us how to get it, as to what is the amount of the untenanted grass lands in the eight counties in acreage or valuation that are available for the purpose of the Congested Districts Board for migration?—The best information you have on that is that already furnished to the Commission under the heading "non-residential holdings." That is the only information available of any value.

Sir John Colomb.—Does that give us the information, because although they are non-residential holdings they are not all suited for migration.

Sir Antony MacDonnell.—It has to be taken with many reservations.

59974. Sir John Colomb.—Assume we spend a million a year in taking up land, and spend one-third of that on the acquirement of this land, I want to know roughly or approximately how many years it would take to absorb all the grazing lands of the eight counties?—The best estimate you would have for that would be from this return of non-residential tenements in all the counties containing congested districts.

Jan. 23, 1908.

Mr. Henry Doran.

59975. Do you mean Mr. Ginnell's?—No. The one I supplied.

59976. That is the maximum amount of information you can give us to enable us to form an idea of what quantity of land will have to be dealt with?—That gives you full information. It is the outside estimate, with the poor law valuation given as well as the acreage.

59977. Mr. Bryce.—Since you gave your evidence in the autumn of 1906 in Dublin have you changed your opinion? You said at that time you thought the willingness to migrate would increase. Since that time have you found that that is so?—The desire to migrate has unquestionably increased; only for the agitation in connection with the lands to be divided

59978. You mean that if it were not for that agitation you could see your way to getting migration done on something like the scale you would like to see?—Yes; on a much larger scale. In fact, in face of the agitation the desire to migrate has increased.

59979. There is another point I would like to hear your views about: that is whether the Commission should give any recommendation with regard to the maintenance of improvements. There are already signs that all these things which you have done on the Dillon Estate, with regard to the improvement of drainage, the clearing of land, and so on, are going back, and it is quite evident that they must go back when your controlling hand is taken away. The whole object and purpose of your work will be largely defeated if these improvements are not maintained and cease to be operative, and the security of the State will be affected also?—That is so.

59980. Have you any suggestions to make with regard to the means of maintaining those improvements?—I would like to say that a great deal of most useful work was carried out by the Board, namely, arterial or main drainage and accommodation roads. On these, especially the drainage, they have made a very large outlay with most satisfactory results; but there is no provision made for the maintenance of these drains and roads, and probably before twenty years they will be nearly as bad as they were, as the people will not maintain them themselves.

59981. At least at present; eventually they might get into the state of realising the necessity of doing it, but at present they won't?—I believe so.

59982. We found on Clare Island a main drain stopped up already?—Yes; that requires annual maintenance. As regards the maintenance of drainage generally, my idea is it should be all put under the district or county to deal with, with power to levy a rate on the holdings benefited for the maintenance.

59983. Mr. Kavanagh.—Main drains?—All main or arterial drains.

59984. Not field drains?—No. Arterial drains. We have never made any drain on a tenant's holding. We always say, "Our business is to give you a chance of improving your holding, and we are willing to make a main drain, which is outlet for the drainage of several holdings." We never make a drain for the benefit of one holding. Neither do we ever make a road for the benefit of one tenant. We do make it when it will serve a number. We always act on that principle. I think the drainage so important that the maintenance of all drains should be placed under the control of the county authority, and the area within each drainage district should be subject to a levy for maintenance.

59985. There was a subject to which Sir John Colomb devoted a good deal of attention in connection with the Parish Committee schemes. He constantly pointed out that a good deal of the work done by the Parish Committees should be done by the local sanitary officers. It was not done by the sanitary officers, and the Congested Districts Board subscribe funds towards assisting the Parish Committees to get these very things done which the sanitary officers ought to have done. Now you propose that this maintenance of drainage should be put into the hands of the local authorities. What security is there that the local authority will do any better than the sanitary authority now does?—I gave evidence before the Arterial Drainage Commission, in which I suggested that the county or district authorities should maintain the drainage systems under the supervision of a central official authority, which I called a Public Works Department. I think this very important, because if no provision be made for the maintenance of these very useful works the security will be seriously impaired, and the tenants will not be able——

59987. I quite approve of your plan. What I want to get at is this—don't you think that putting the County Councils in action will be the business of a central authority?—Yes. That is why I mentioned it.

59988. And a central authority like the Local Government Board can come down on the County Councils, and make them do a thing. There ought to be some body who ought to be able to make the County Councils work?—Yes. That is why I went back on my evidence, and explained to you that I had suggested such an authority, and that it should be the duty of such authority to see that the drainage system of the country was properly maintained, and that a rate should be levied from the lands benefited to cover the maintenance.

59989. That ought to apply to the roads also?—It would be more difficult to make it apply to the roads.

59990. But you have just said that if the roads are not maintained in twenty years they will be as bad as before you made them?—That is so.

Mr. Bryce.—How are you going to secure that that is to be done?

59991. Sir Antony MacDonnell.—If you get them under the county scheme they will be looked after?—A great many of the roads the Board have to make are accommodation roads, and will not be taken over by the county because they only affect a limited number of people who want access to a bog or a village; and the difficulty of getting the maintenance of these roads thrown on the county authority is very great, because only those who use the roads ought to be required to pay for them. That is the general feeling. I will submit my suggestions for the maintenance of these roads later on.*

59992. Mr. Sutherland.—I may point out how they do it in Scotland. We make no new road or give no grant for a road unless it comes to us through the road authority?—Then you would have no, what we call, accommodation roads, for access to detached parts of holdings, or to bogs or villages on your estates.

59993. We get applications from townships in the West of Scotland to get a road made. We write back—"You have your own County Council. It is the road authority. Put it through them, and we will enter into an arrangement with them." That is the way it is done. We say to the County Council—"We will give you a grant towards the road on condition that you hold it." There are hundreds of miles of road done in this way?—The Board have contributed thousands of pounds to roads of that class—that is, roads that can be dealt with by the county. A road running to a bog is disqualified by law, unless it connects two public thoroughfares.

59994. Mr. Kavanagh.—Unless the County Surveyor certifies that it is of public utility?—Yes. It occurs to me at this moment from what Lord Dudley said yesterday about the Congested Districts Board making a contribution in connection with agricultural developments through the Department of Agriculture, that it might be possible for the Department of Agriculture to make some small contribution from that fund towards the upkeep of these roads in the interests of agricultural development.

59995. Mr. Bryce.—It is a case where a stitch in time saves nine. If there was somebody whose business it was to go about and see that these roads were all right the probability is that the people at the time, if it was pointed out to them, would with a little combined attention, do what was required?—Yes.

59996. But as it is nobody's business it is not done?—Yes. The road may be impassable in five years.

59997. All the people in the county should get accommodation. These people are paying *pro rata* for the roads of the county, and they have no roads: is that fair?—It is not.

59998. Mr. Kavanagh.—To put it on the county you would have to strain the law, which says that until the County Surveyor certifies it to be a work of public utility there cannot be a new road.

* See p. 45.

59999. Mr. BRYCE.—Just one point in connection with that. It applies also to the maintenance of the other works on which the Board has spent money. I don't see how you are going to get a public authority in there at all. My own notion about it was, so long as the Board exists in its operations, for twenty years or any time you like, that it should be given by the new legislation, control over all the work that it did, and all the money it has expended in the past and is going to expend in the future; that, in other words, the Board should have a certain continuing power in certain officers to see that all the money it spent on roads and drains has not been expended uselessly, and that if these works are not put into the hands of another authority—as there is in everything else a certain authority to see to their maintenance—then the Board should have a certain power of control over these works in some way or another, and a power to keep up the improvements, and to see that the houses are kept slated and thatched rightly, and so on; otherwise the expenditure that has been incurred is useless?—I don't think there is so much danger of allowing houses to go out of repair.

60000. You think that the individual comfort of the people would come in there?—Yes. I think that there is not the same necessity as there is in the case of the roads.

60001. I don't think there is?—But I think the new Board should have compulsory powers to call on the people who were accommodated by a particular road to improve it if it needed repair, and in the event of their failing to do so, to put it into proper condition, and make a levy for the cost.

60002. I would like to know whether you have any suggestion to make with regard to a clause in a bill restricting the occupier from mortgaging his holding with a view to preventing the land from getting into the hands of a gombeen man. You expressed a desire to have such a provision before. Have you thought what form that provision should take, and whether it would affect the credit of the people with the shopkeepers and their general credit, so as to interfere with the development of their land?—?—I don't think it would interfere with their credit. The credit of a small landholder is largely regulated by his personal character and reputation. The proportion of small holdings sold for debts is very small.

Mr. SUTHERLAND.—What is the practice under the Homestead Acts?

Mr. BRYCE.—We can get particulars of that by applying to the Foreign Office and the Colonial Office.

60003. Sir JOHN COLOMB.—What is your view of this suggestion? In creating these new holdings there is a certain loss incurred which the State would have to pay. What do you think of the proposal to exercise pre-emption when the occupier of that holding wishes to sell, at all events, pre-emption to the extent of the loss incurred by the State? Take one of these cases that you gave us yesterday, of a holding created at a net loss to the State of £181. That holder wants to sell. Do you not think that the Imperial Exchequer has the right to say, "We will exercise this sort of pre-emption; before we will sanction that we must be paid £181"?—I think it would not be unfair, but it would minimise the inducement to migrate. I should remind you that the gross loss was £169, and not the net, after deducting value of occupation interest of the surrendered holding

60004. Here is a return of non-residential land *produced*).* The upper part relates to congested districts. That is untenanted land, non-residential. If add up to the total of the acreage at the foot of the column, of all those columns, will that give me the acreage and extent of the non-residential lands within the congested area?—Yes. Within the counties containing congested districts.

60005. If I add up the rateable values it will produce a corresponding result, and will give the total rateable value of untenanted land?—Yes.

60006. If I take that, roughly, as a mere approximation, and multiply it by thirty, I get the purchase value of the untenanted land in the counties containing congested districts?—Yes; of the non-residential holdings.

60007. If I then divide that by three, as the one-third of a million, it will give me a rough, glimmering of an idea how long it would take to absorb all the untenanted land in the congested district counties if £300,000 a year were appropriated for the purpose? It would.

60008. CHAIRMAN.—Take the question of the cost of land staff. If the Board is to turn out a million's worth of land a year, how much land do you think would it be necessary for them to hold?—I would think they ought to hold about three millions worth.

60009. Sir ANTONY MACDONNELL.—How long would the million's worth of land be under treatment?—On an average, the tenanted land two years. As regards the untenanted land, my idea is the Board ought to have about a million as stock in hands, if they can, so as to give a larger field of selection to migrants, selling one-third of that each year, and only buying one-third.

60010. Then you would want to hold three millions worth of land?—Nearly.

60011. CHAIRMAN.—There seems to be some difference of opinion between Father O'Hara and Mr. Mitchell and yourself with regard to the capabilities of the present staff. Mr. Mitchell told us in his evidence that the present staff could turn out £400,000 worth of land annually. Father O'Hara said he thought it could deal with considerably more land than it had been dealing with—that is, an average of £200,000 a year. Do you agree with that?—No. I understand that Father O'Hara and Mr. Mitchell meant the capabilities of the full establishment as provided for, but which was not then brought up to its full strength.

60012. Is it up to its full strength now?—Yes; but in any case the present staff, which is up to its full strength as agreed to by the Board, would not, in my opinion, be able to turn out more than £300,000 a year, one year with another.

60013. That is what it was formed for?—Yes.

60014. This present staff, as brought up to its full strength, costs more than £30,000?—It costs about £31,000 or £32,000.

60015. Sir ANTONY MACDONNELL.—That includes the office?—Yes. That includes the office.

60016. I got the figures from Mr. O'Brien the other day. He told me it was between £18,000 and £20,000 for the outdoor staff?—Yes.

60017. Does your indoor staff cost £9,000 or £10,000?—Yes.

60018. If the £30,000 includes office staff as well as outdoor staff, to increase the staff to a size that would turn out a million you would not want a very large increase in the indoor staff?—Not a proportionate increase.

60019. You say the present cost of the outdoor staff is £20,000?—Yes.

60020. To turn out a million, what increase would be required in the outdoor staff?—I would say it would have to be two-and-a-half to three times what it is at present; three times I would say, because I would like to turn it out more rapidly, and a great deal of time will be taken up inspecting estates and negotiating for purchase—from £50,000 to £60,000, including clerks of works, surveyors, and paymasters, which are now charged to estates.

60021. Have you made out a statement of the number of inspectors and various other officers?—I have a list of them here.

60022. CHAIRMAN.—Can you make out in detail exactly what the cost of a staff would be to turn out a million's worth of land in the year?—Yes. It will be based largely on what we are doing.

60023. You can do that and tell the number of inspectors you would want and everything else?—Yes.

Mr. Mitchell.—I have asked for some more figures, which I shall have to-morrow. It will be about £60,000. That is including both indoor and outdoor.

CHAIRMAN.—That would cover everything, to turn out a million's worth of land—the whole thing would cost only £60,000?

Mr. Mitchell.—I shall know a little more correctly to-morrow. It will be about £60,000. I am not including clerks of works, surveyors, and paymasters.

CHAIRMAN.—That is not an increase of £60,000?

Mr. Mitchell.—The present cost of administration in connection with estates is about £25,000.

CHAIRMAN.—Indoor and outdoor?

Mr. Mitchell.—Yes. I am assuming an increase of two-thirds on that. Assuming that that is the expense of putting through £330,000 worth of land, that is, one-third of the whole, I am assuming that the other two-thirds, that is the increase, would not cost at quite

* See pp. 48-9.

Jan. 23, 1908.

Mr. Henry Doran.

the same rate. If they did it would be £75,000. The increase that I estimate is £35,000; that is, in connection with estates.

CHAIRMAN.—Can you give us a regular statement on that?

Sir ANTHONY MACDONNELL.—Showing on one side the existing staff and on the other the proposed staff?

Mr. Mitchell.—Perhaps I can give you the particulars I have with a view to your criticism.

Mr. SUTHERLAND.—You can only give the outdoor staff?—(*Witness*)—That is all.

60024. CHAIRMAN.—Can you and Mr. Mitchell give us a detailed statement, showing on the one side the present staff, and, in your opinion, the amount of land that the staff can turn out?—I am prepared to do that now.

60025. And in the next column you would detail the number of people who would have to be employed?—I have done that for the outdoor staff. If you wish to have it with the other I could put them together to-night and submit it to-morrow.

60026. Mr. BRYCE.—Those figures given by Mr. Mitchell do not include the industries business, only the administration of estates. We want it for everything?—(*Witness*)—I have all the figures for my own department (*produces papers*). You will pardon me for reminding you that I made no provision at all for paying more for land than the Board could sell it at, and I believe that that is likely to happen. I have prepared particulars here of the prices paid by the Board for tenants' interest, and they had to pay rather more for the land than they would be able to re-sell it at, and the Board would have to lose that difference. In the same way, if they had to pay more for untenanted land than twenty-seven years' purchase the loss would have to come out of the Board's fund or some special fund.

60027. CHAIRMAN.—That is with regard to the percentage of loss?—Yes. I forgot to mention that the idea I had was that, to begin with, we should have an inspector for each county, and one chief inspector who would constantly supervise the inspectors.

60028. How many counties would you allow for?—Nine.

60029. Would you want one in every county?—No at the beginning. In some counties we might want two inspectors. The inspector in charge of a county would have under him men to carry out the detailed work. It is not possible to get men competent to discharge the duties that we have to carry out without some training. They are not to be had, because, outside the Estates Commissioners' staff or my staff, you cannot find men who have had experience of this work. I propose to place the new men under the direction of the officers who have had some experience.

60030. Mr. BRYCE.—Have you got any suggestion to make with regard to the prevention of the amalgamation and the prevention of the sub-division of holdings. The amalgamation of holdings is more or less connected with the question of mortgaging and alienation. I think it would be desirable that you should send in a memorandum on that?—Perhaps it would be better, and on the question, maintenance of drainage and roads.*

60030A. Sub-division, amalgamation, alienation, mortgaging, and also maintenance?—Very well.

60031. Mr. KAVANAGH.—Would not you give a power of pre-emption to the State?—When holdings in counties containing congested districts are put up for sale the Board should have the right of pre-emption.

* See p. 45.

Commission adjourns.

ONE HUNDRED AND SIXTEENTH PUBLIC SITTING.

FRIDAY, JANUARY 24TH, 1908,

AT 11.0 O'CLOCK, A.M.

In Westminster Palace Hotel, London.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right. Hon. Sir ANTONY MACDONNELL, G.C.S.I.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; The Right Hon. Sir JOHN COLOMB, K.C.M.G.; Most Rev. Dr. O'DONNELL; JOHN ANNAN BRYCE, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. HENRY DORAN further examined.

60032 Sir FRANCIS MOWATT (*in the Chair*).—You have prepared, I understand, a statement of your present staff and of the increased staff which you believe would be necessary for the increased land work, which has been discussed by the Commission?—Yes.

60033. Perhaps it would be better to get on paper a slight statement of the different stages of the work that you do now, and then we will compare the different conditions?—Yes.

60034. The purchase of land is really initiated by correspondence between yourself, as chief land inspector, and the owners?—Yes.
